Panel Feed-Through Blocks

BlockMaster Electronics

If It's A Terminal Block, BlockMaster Has It!

With our unique product line and extensive inventory, BlockMaster Electronics has been your best source for quality terminal blocks at competitive prices since 1981.

But thanks to our new **Value-Added Center**, today we are better-equipped to meet your needs than ever before. We can now perform specific, extensive customizations right here at our headquarters. The result: reduced costs and dramatically shorter lead times for our customers.

Using modular construction, we can add or subtract positions on many of the connectors in our product offering to create the part you need. If you need special hardware attached, such as quick connects or jumpers, we can do it in-house. We can cut barrier blocks seamlessly to the number of positions you need, shipping within a few days instead of four to six weeks.

Another new value-added service is our in-house marking capability. We can mark most of our parts per the customer's spec using Pad Printing technology, allowing for quick turnaround.

We can even color-code certain modular connectors by position! Our **Jelly Beans** series terminal blocks are built in-house and can be marked or colored any way the customer requires, using colored positions and various terminal styles. They're perfect for field application wiring where connection is mission-critical, and their color-coding helps eliminate wiring mistakes.

Thanks to our new Value-Added Center, BlockMaster is more capable and responsive than ever.

We are your one-stop terminal block company.
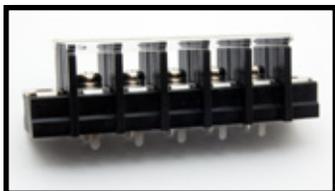

BlockMaster's Chicago Headquarters

The Value-Added Center Offers Extensive Customizations and Fast Turnaround Times

High-Power Terminal Blocks
(PC or Panel Mount)
### 11.0mm to 27.0mm Center Spacing

OULP-930 Series

Push-In Wire Connectors

FASTER & SAFER:
No More Twisting & Taping!

Touch-Safe; wires are safely shrouded by connector housing

Clear housing provides visual confirmation and
individually held wires eliminate loose connections

Built-in strip guide shows how much wire to strip

Made with highly conductive copper

Accepts solid and tinned stranded wire 22-12AWG

Safer and easier than traditional twist wire connectors

Greatly reduces wiring time; no more twisting or taping!

Compact size; enables perfect connections in tight spaces
