

## New Power LEDs shine bright

**May 2006** - CML Innovative Technologies (CML-IT) is introducing a new range of RoHS compliant Power LEDs available in 1, 2.5 and 5 watt versions and a range of colours - pure and warm white, blue, green, red, cyan and yellow & RGB. Available in many different formats including unmounted or square or star board mounted, the new devices are designed for applications where a high level of light output is required to replace traditional light bulbs or halogen lamps.

Compared with conventional bulbs and halogen lights, CML-IT's new range of Power LEDs benefits from lower power requirements, a much longer life and much lower heat emissions. This is significant when the devices are in close proximity to surrounding plastic or wood materials, which can easily suffer damage through high temperatures.
