The power in relays and timers since 1954

2012 Catalogue

- PCB relays
- Industrial relays
- Relay interface modules
- Sockets and accessories
- Timers
- Monitoring relays
- Energy meters
- Surge protection devices
- Industrial thermostat
- Modular solid state relays
- Light dependent relays
- Electronic step relays
- Modular contactors
- Electronic staircase timers
- Time switches
- Dimmers
- PIR movement detectors
- Thermostats

Plug-in / PCB Relays - Overview

	Rated current	No. of Contacts	Features	Sockets
 30 Series	2 A	2 CO	**Subminiature DIL relays** - 2 Pole changeover contacts - Low level switching capability - Subminiature: - industry standard DIL package - Sensitive DC coil: 200 mW - Wash tight: RT III	
 32 Series	6 A	1 CO 1 NO	**Subminiature PCB relays** - 1 Pole changeover contacts or 1 Pole normally open contact - Subminiature, low profile package - Sensitive DC coil: 200 mW - Wash tight: RT III	
 34 Series	6 A	1 CO 1 NO	**Ultra-slim Electromechanical PCB relays** - Sensitive DC coil: 170 mW - 5 mm wide - 6kV (1.2/50 µs) isolation, coil - contacts	 93 Series
	0.1 A 2 A	1 output (SSR)	**Ultra-slim Solid State PCB relays** - Sensitive DC input circuits - 5 mm wide - Silent, high speed switching with long electrical life	
 36 Series	10 A	1 CO 1 NO	**Printed circuit relay** - 1 Pole changeover contacts or 1 Pole normally open contact - Miniature "Sugar Cube" package - DC coil: 360 mW - Wash tight: RT III	
 40 Series	12 A 16 A	1 CO 1 NO	**Miniature PCB relay** - DC coils - 8mm, 6kV (1.2/50 µs) isolation, coil - contacts - Flux proof: RT II standard - 3.5 or 5 mm pin pitch	 95 Series
	10 A 16 A	1 CO 1 NO	**Miniature PCB/plug-in relay** - DC coils & AC coils - 8mm, 6kV (1.2/50 µs) isolation, coil - contacts - 3.5 or 5 mm pin pitch	
	8 A	2 CO 2 NO		
 41 Series	12 A 16 A	1 CO	**Low profile electromechanical PCB relay** - Low profile, 15.7 mm height - DC coils: 400mW - 8mm, 6kV (1.2/50 µs) isolation, coil - contacts - Flux proof: RT II standard, (RT III option)	 93 Series
	8 A	2 CO		
	3 A 5 A	1 output (SSR)	**Low profile Solid State PCB relay** - Low profile, 15.7 mm height - Sensitive DC input circuits - Silent, high speed switching with long electrical life	 95 Series
 43 Series	10 A 16 A	1 CO 1 NO	**Low profile PCB relay** - Low profile, 15.4 mm height - Sensitive DC coils: 250mW or 400mW - Very high coil contact isolation 10mm, 6kV (1.2/50 µs) - Flux proof: RT II standard, (RT III option) - 3.2 or 5mm pin pitch	 95 Series
 44 Series	6 A 10 A	2 CO	**Miniature PCB relay** - High physical separation between adjacent contacts - DC coils - 8mm, 6kV (1.2/50 µs) isolation, coil - contacts - Flux proof: RT II - 5mm pin pitch	 95 Series
 45 Series	16 A	1 NO 1 NC	**Miniature PCB relay** - Relay for +125°C ambient use - Contact gap ≥ 3mm according to EN 60730-1 - 8mm, 6kV (1.2/50 µs) isolation, coil - contacts - Sensitive DC coil: 360mW - PCB mounting + Faston 250	

finder

Plug-in / PCB Relays - Overview

	Rated current	No. of Contacts	Features	Sockets
 46 Series	8 A	2 CO	**Miniature industrial relays** - Socket mount or direct connection via Faston connectors - AC & DC coils - Available with lockable test button, mechanical flag & LED indicator - 8 mm, 6 kV (1.2/50 µs) isolation, coil-contacts	 97 Series
	16 A	1 CO		
 50 Series	8 A	2 CO	**Safety relay (EN 50205)** - 2 Pole changeover contacts - PCB Relay with forcibly guided contacts according to EN 50205 type B - High physical separation between adjacent contacts - 8 mm, 6 kV (1.2/50 µs) isolation, coil-contacts - Flux proof: RT II	
 55 Series	10 A	2 CO 3 CO	**General purpose relays** - AC & DC coils - PCB or Plug-in mounting - Available with lockable test button, mechanical flag & LED indicator	 94 Series
	7 A	4 CO		
 56 Series	12 A	2 CO 2 NO 4 CO 4 NO	**Miniature power relays** - PCB or Plug-in mounting - Flange mount option (Faston 187 termination) - AC & DC coils - Available with lockable test button, mechanical flag & LED indicator	 96 Series
 60 Series	10 A	2 CO 3 CO	**General purpose relays** - 8 & 11 pin plug-in - Flange mount - AC & DC coils, "current sensing relays" or "intensity relays" - Available with lockable test button, mechanical flag & LED indicator - Version with bifurcated contacts for low level switching	 90 Series
 62 Series	16 A	2 CO 2 NO 3 CO 3 NO	**Power relays** - PCB mount or Plug-in mount (Faston 187) or Flange mount (Faston 250) - AC & DC coils - NO contacts options, > 3mm contact gap - LED, mechanical indicator & test button options	 92 Series
 65 Series	20 A	1 NO + 1 NC	**Power relays** - AC & DC coils - PCB mount or Flange mount (Faston 250) - NO version, > 3mm contact gap	
	30 A	1 NO		
 66 Series	30 A	2 CO 2 NO	**Power relays** - PCB mount or Flange mount (Faston 250) - AC & DC coils - 8mm, 6kV (1.2/50 µs) isolation, coil - contacts	

finder

Relay interface modules - Overview

	Rated current	No. of Contacts	Features
 38 Series	6 A 16 A	1 CO	**Relay interface modules** - 6.2mm or 14mm wide - DC or AC/DC coil versions - Special coil / input leakage current suppression types - Screw & screwless terminals (SSR = Solid state relay)
	8 A	2 CO	
	0,1 A 2 A	1 SSR	
	3 A / 5 A	1 SSR	
 39 Series	6 A	1 CO	**Relay interface modules** NEW - 6.2mm wide - DC or AC/DC coil versions - Special coil / input leakage current suppression types - Extra protection with replaceable fuse - Timer version with 8 functions - Screw terminals (SSR = Solid state relay)
	2 A	1 SSR	
 48 Series	10 A 16 A	1 CO	**Relay interface modules** - 15.8mm wide - AC or DC coils - Instant ejection of relay using plastic retaining clip - Supply status indication and EMC coil suppression module as standard - Screw and screwless terminals
	10 A 8 A	2 CO	
 49 Series	10 A 16 A	1 CO	**Relay interface modules** - 15.8mm wide - AC or DC coils - Instant ejection of relay using plastic retaining clip - Supply status indication and EMC coil suppression module as standard - Screw and screwless terminals
	8 A	2 CO	
 4C Series	16 A	1 CO	**Relay interface modules** - 15.8mm wide - AC or DC coils - Instant ejection of relay using plastic retaining clip - Supply status indication and EMC coil suppression module as standard - Screw and screwless terminals - Mechanical indicator & test button
	8 A	2 CO	
 58 Series	10 A	2 CO 3 CO	**Relay interface modules** - 27mm wide - AC or DC coils - Instant ejection of relay using plastic retaining clip - Supply status indication and EMC coil suppression module as standard - Mechanical indicator & test button
	7 A	4 CO	
 59 Series	10 A	2 CO	**Relay interface modules** - 27mm wide - AC or DC coils - Instant ejection of relay using plastic retaining clip - Supply status indication and EMC coil suppression module as standard - Screw and screwless terminals - Mechanical indicator & test button
	7 A	4 CO	
 99 Series			**Coil indication and EMC suppression modules** Depending on module selected, they can provide; - Suppression of coil back emf on switch-off - LED indication to show when the coil in energized. - Protection against reverse polarity applied across the coil terminals. - By-pass of troublesome leakage currents in the coil circuit.

finder

Timers and Monitoring relays - Overview

	Rated current	Function & Features	
 19 Series	1 A 5 A 16 A	Status indicating modules Override control modules Analogue Override control module Power relay module	**Override & Status indicating modules** NEW - Clear indication of the signal or equipment status - Easy to operate selection switches and potentiometers - Feedback contact; signals when switch is not in "Auto" position - Compact housing: 2 widths, 17.5 or 35 mm
 71 Series	10 A	Over & Under voltage monitoring Voltage or current detecting Phase asymmetry Phase rotation Phase loss Thermistor temperature sensing	**Monitoring relays** - 35mm wide - 1 or 3 phase systems - Adjustable or Fixed values - Positive safety logic - 35mm rail (EN 60715) mount
 72 Series	16 A	Level control (Emptying or Filling)	**Monitoring relay** - for conductive liquids - Sensitivity fixed or adjustable (5…150kΩ)
	6 A	Phase rotation Phase loss	**Monitoring relay** - 17.5mm wide - Universal voltage monitoring (208...480VAC)
 77 Series	5 A	NEW Zero-crossing switch-on Random switch-on	**Modular solid state relay (SSR)** - 17.5mm housing - Suggested for lamp load - 35 mm rail (EN 60715) mounting
 7E Series	25 A 32 A 65 A	NEW Energy meter	**kWh Energy meter** - 1 or 3 phase - Single or Double tariff - Pulse output for remote energy management; SO interface (open collector) according DIN 43864 to link the energy meter to a centrally located monitoring/management system - 35 mm rail (EN 60715) mount
 7P Series	—	NEW SPD Type 1, 2, 3	**Surge protection device (SPD)** - Surge arrester suitable for 230 V or 400 V system/applications - Single phase systems or three-phase systems - Replaceable varistor module and encapsulated spark gap module - Visual and remote signalling of varistor status - 35mm rail (EN 60715) mount
 7T Series	5 A	NEW Panel thermostat Heating control Ventilation control	**Panel thermostat** - Small, compact size - Snap action themostatic Bimetal sensor - Wide temperature setting range - Long electrical life - 35 mm rail (EN 60715) mount
 80 Series	1 A 16 A	Multi-functions Mono-functions	**Modular timers** - 17.5mm wide - Six time scale from 0.1s to 24h - Multi-voltage - High input /output isolation - 1 pole - Relay output, 16A - Solid-state output, 1A
 81 Series	16 A	NEW Multi-function and multi-voltage timer	**Modular timers** - 17.5 mm wide - Seven functions (4 with supply start and 3 with signal start with Reset function) - Six time ranges from 0.1s to 10h - 1 pole - 35 mm rail (EN 60715) mounting)
 83 Series	16 A	NEW Multi-functions Mono-functions	**Modular timers** - 22.5 mm wide - Six time scale from 0.1s to 10 days - Multi-voltage - 1 pole - Special version: 2 timed contacts or 1 timed + 1 instantaneous contact

finder

Timers and Monitoring relays - Overview

	Rated current	Function & Features		Sockets
 85 Series	7 A 10 A	Multi-functions	**Miniature plug-in timers** - AC/DC supply non polarized - Seven time scales from 0.05s to 100h - 2, 3 or 4 pole	 94 Series
 86 Series	–	Multi-functions Bi-functions	**Timer modules** - Multi-voltage - Time scale from 0.05s to 100h - Wide supply range in AC or DC coils - Timer for 90, 92, 94, 95, 96, 97 series sockets	 9x Series
 87 Series	5 A 8 A	Multi-functions Mono-functions	**Modular timers** - 22.5mm wide - AC/DC supply non polarized - Special version: 2 timed contacts or 1 instantaneous + 1 timed - Time scale from 0.5s to 60h - Multi-voltage	
 88 Series	5 A 8 A	Multi-functions	**Plug-in / Front of panel mount timers** - 8 or 11 pin - Time scales from 0.05s to 100h - AC/DC supply - Version available with 2 timed contacts or 1 instantaneous + 1 timed	 90 Series
 93 Series	–	Multi-functions	NEW **Slim timed sockets** - 6.2mm wide - 4 time scales from 0.1s to 6h - AC/DC supply - For use with 34.51 and 34.81 relays	

Products for residential and commercial applications - Overview

		Rated current	Function & Features	
	10 Series	12 A 16 A	Light dependent relay	**Light dependent relay for pole or wall mounting** - 1 or 2 contacts - Double break type - Double setting and Double contacts - Protection category IP54
	11 Series	12 A 16 A	Light dependent relay	**Modular Light dependent relay** - 1 contact - 35 mm wide - 230 VAC, available also with 12 and 24 VAC/DC - 35mm rail (EN 60715) mount
	12 Series	16 A	Daily time switch Weekly time switch "Astro" time switch	**Time switch** - Mechanical or electronic version - 1 or 2 contacts - 35mm rail (EN 60715) mount
	13 Series	8 A 10 A 16 A	Electronic step relay Call & Reset Relay	**Electronic step and bistable relay** - 35 mm rail (EN 60715) mount or panel mount - 1 or 2 contacts - Call relay with reset command - Longer mechanical and electrical life, and much quieter than electromechanical step relays
	14 Series	16 A	Electronic staircase timers	**Modular electronic staircase timers** - 17.5 mm wide - Multi-functions or Mono-function - Suitable for 3 or 4 wire systems - Version with "Switch-off early warning"
	15 Series	400 W 500 W	Dimmer	NEW **Dimmer for control of lighting levels** - 35 mm rail (EN 60715) mount or panel mount - "Soft" On and Off transitions - Thermal protection against overload
	18 Series	10 A	Movement detector	**PIR movement detector for internal or external installations - wall or ceiling mount** - Special version: IP54 - Small size - Adjustable ambient light intervention threshold - Adjustable Light On Time
	20 Series	16 A	Step relay	**Modular step relay** - 17.5 mm wide - AC or DC coils - 1 or 2 contacts - Choice of 6 switching sequences - 35 mm rail (EN 60715) mount
	22 Series	25 A	Modular contactors	NEW **Modular contactors** - 17.5 and 35 mm wide - AC/DC silent coils - 2 or 4 contacts - 35 mm rail (EN 60715) mount
	26 Series	10 A	Step relay	**Step relay with electrically separate coil and contact circuits** - Panel mount - AC coils - 1 or 2 contacts - Choice of 6 switching sequences
	27 Series	10 A	Step relay	**Step relay, for electrically common coil and contact circuits** - Panel mount - AC coils - 1 or 2 contacts - Choice of 3 switching sequences

Features

Printed circuit mount
2 A signal relay

- 2 Pole changeover contacts
  Low level switching capability
- Subminiature - industry standard DIL package
- Sensitive DC coil - 200 mW
- Wash tight: RT III
- Cadmium Free contact material

30.22

- Low coil power
- Au clad contacts
- PCB mount

Contact specification

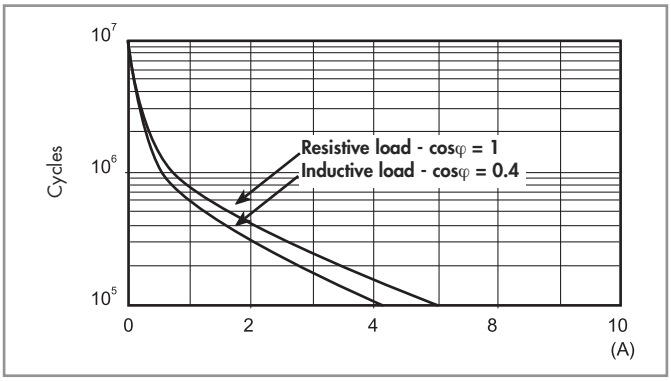
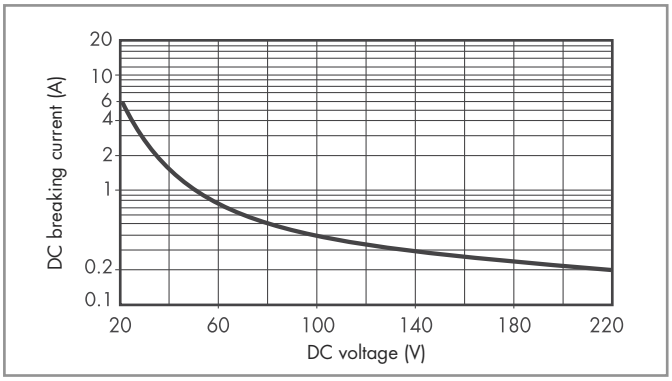
F 32 - Electrical life (AC) v contact current



H 32 - Maximum DC1 breaking capacity



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $100 \cdot 10^3$ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load.
  Note: the release time for the load will be increased.

34 Series - Slim solid state PCB relays (SSR) 0.1 - 2 A

Features

Ultra-slim - Solid State Relays

Printed circuit mount
- direct or via PCB socket
35 mm rail mount
- via screw or screwless sockets

- Single circuit output switching options
  - 2 A 24 V DC
  - 0.1 A 48 V DC
  - 2 A 240 V AC
- Silent, high speed switching with long electrical life
- Ultra slim, 5 mm, package
- Sensitive DC Input circuits (Dual AC/DC input drive possible using 93 series sockets)
- UL Listing (certain relay/socket combinations)
- Wash tight: RT III
- 2,500 V insulation, input-output

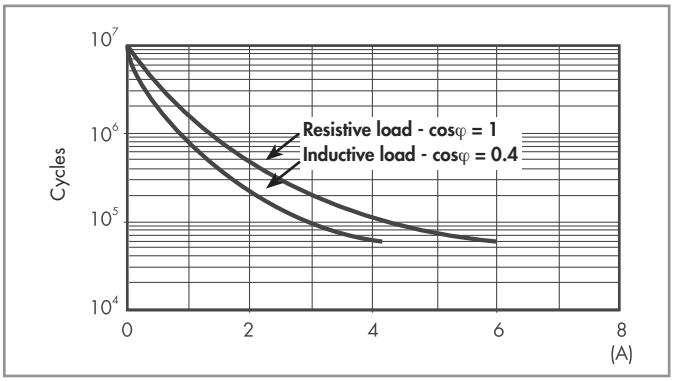
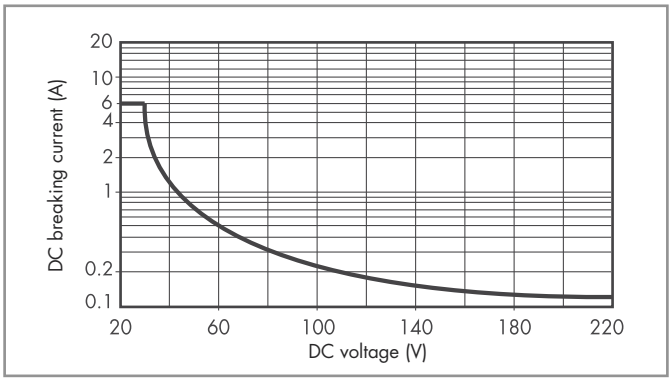
Contact specification

F 34 - Electrical life (AC) v contact current



H 34 - Maximum DC1 breaking capacity



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $60 \cdot 10^3$ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load. Note: the release time for the load will be increased.

Other data				
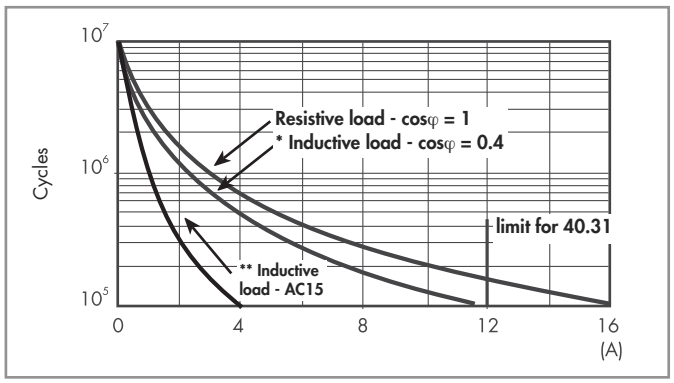
Bounce time: NO/NC		ms	2/5	
Vibration resistance (10...200)Hz: NO/NC		g	20/5	
Shock resistance NO/NC		g	20/5	
Power lost to the environment	without contact current	W	0.5	
	with rated current	W	1.2 (40.31)	1.8 (40.61)
Recommended distance between relays mounted on PCB		mm	≥ 5	

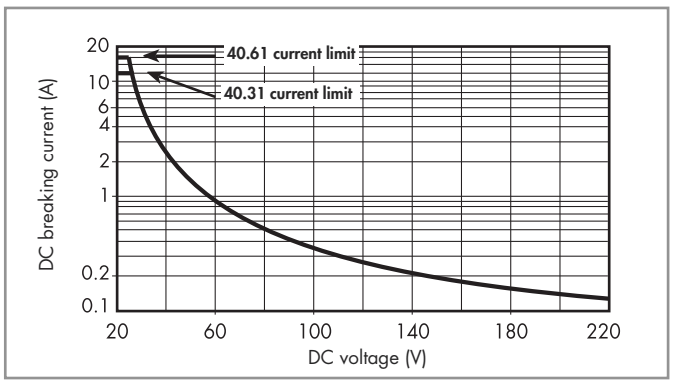
Contact specification

F 40 - Electrical life (AC) v contact current
Types 40.31/61



* Inductive load - cosφ = 0.4: inrush current = rated current
** Inductive load - AC15: inrush current = 10 x rated current

H 40 - Maximum DC1 breaking capacity



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $100 \cdot 10^3$ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load.
  Note: the release time for the load will be increased.

Coil specifications

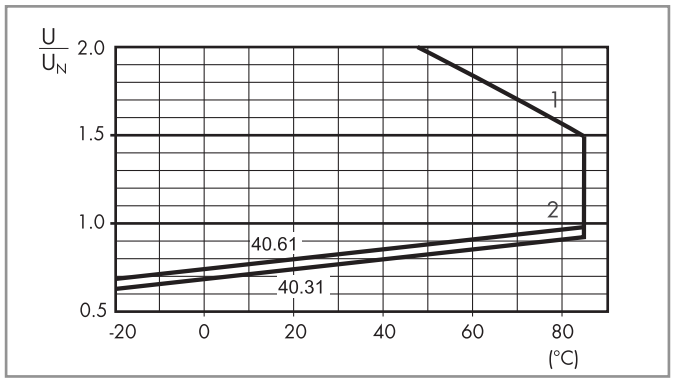
DC coil data - 0.5 W sensitive (type 40.31)

Nominal voltage U_N	Coil code	Operating range U_{min}	Operating range U_{max}	Resistance R	Rated coil consumption I at U_N
V		V	V	Ω	mA
12	**7**.012	8.8	18	300	40
24	**7**.024	17.5	36	1,200	20

DC coil data - 0.5 W sensitive (type 40.61)

Nominal voltage U_N	Coil code	Operating range U_{min}	Operating range U_{max}	Resistance R	Rated coil consumption I at U_N
V		V	V	Ω	mA
12	**7**.012	9.6	18	300	40
24	**7**.024	19.2	36	1,200	20

R 40 - DC coil operating range v ambient temperature



1 - Max. permitted coil voltage.
2 - Min. pick-up voltage with coil at ambient temperature.

Features

1 & 2 Pole relay range
40.31 - 1 Pole 10 A (3.5 mm pin pitch)
40.51 - 1 Pole 10 A (5 mm pin pitch)
40.52 - 2 Pole 8 A (5 mm pin pitch)

PCB mount
- direct or via PCB socket
35 mm rail mount
- via screw and screwless sockets

- DC coils (standard or sensitive) & AC coils
- Cadmium Free contact material
- 8 mm, 6 kV (1.2/50 µs) isolation, coil-contacts
- UL Listing (certain relay/socket combinations)
- Flux proof: RT II standard, (RT III option)
- 95 series sockets
- Coil EMC suppression
- Timer accessories 86 series

2 - Min. pick-up voltage with coil at ambient temperature.

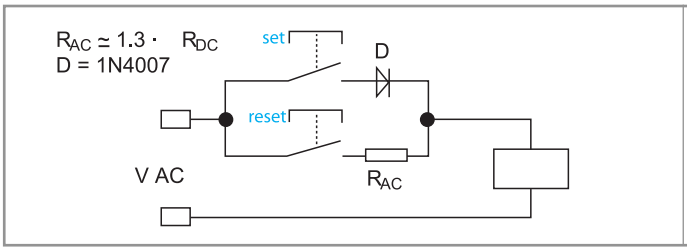
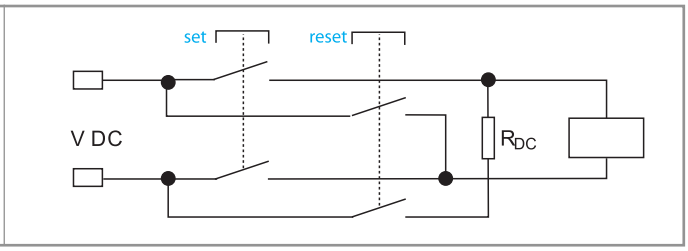
Wiring diagram for 40 series bistable coil version

AC Operation



On momentary closure of the SET switch the relay is magnetised through the diode and the relay contacts transfer to the set position and remain in this position.
On momentary closure of the RESET switch the relay is demagnetised through limiting resistor (R_{AC}) and the contacts return to the reset position.

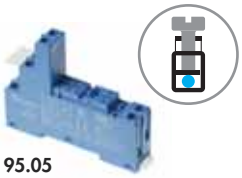
DC Operation



On momentary closure of the SET switch the relay is magnetised and the relay contacts transfer to the set position and remain in this position.
On momentary closure of the RESET switch the relay is demagnetised through limiting resistor (R_{DC}) and the contacts return to the reset position.

Notes: The minimum SET or RESET impulse time is 20 ms. The maximum time can be continuous. In practice, always ensure that the SET and RESET contacts cannot be operated simultaneously.

95 Series - Socket overview for 40 series relays



95.05

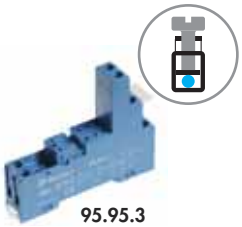
See page 10

Module	Socket	Relay	Description	Mounting	Accessories
99.02	95.03	40.31	**Screw terminal (Box clamp) socket**	Panel or 35 mm rail (EN 60715) mount	- Coil indication and EMC suppression modules - Jumper link - Timer modules - Plastic retaining and release clip
	95.05	40.51 40.52 40.61	- Top terminals - Contacts - Bottom terminals - Coil		

95.85.3

See page 11

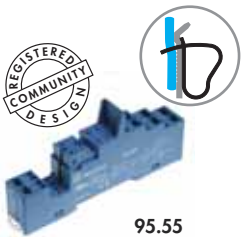
Module	Socket	Relay	Description	Mounting	Accessories
99.80	95.83.3	40.31	**Screw terminal (Box clamp) socket**	Panel or 35 mm rail (EN 60715) mount	- Coil indication and EMC suppression modules - Jumper link - Plastic retaining and release clip
	95.85.3	40.51 40.52 40.61	95.83.3 wiring: - Top terminals - Contacts - Bottom terminals - Coil		



95.95.3

See page 12

Module	Socket	Relay	Description	Mounting	Accessories
99.80	95.93.3	40.31	**Screw terminal (Box clamp) socket**	Panel or 35 mm rail (EN 60715) mount	- Coil indication and EMC suppression modules - Jumper link - Plastic retaining and release clip
	95.95.3	40.51 40.52 40.61	- Top terminals - Contacts - Bottom terminals - Coil		



95.55

See page 13

Module	Socket	Relay	Description	Mounting	Accessories
99.02	95.55	40.51 40.52 40.61	**Screwless terminal socket** - For fast cable connections - Top terminals - Contacts - Bottom terminals - Coil	Panel or 35 mm rail (EN 60715) mount	- Coil indication and EMC suppression modules - Timer modules - Plastic retaining and release clip
					

95.55.3

See page 14

Module	Socket	Relay	Description	Mounting	Accessories

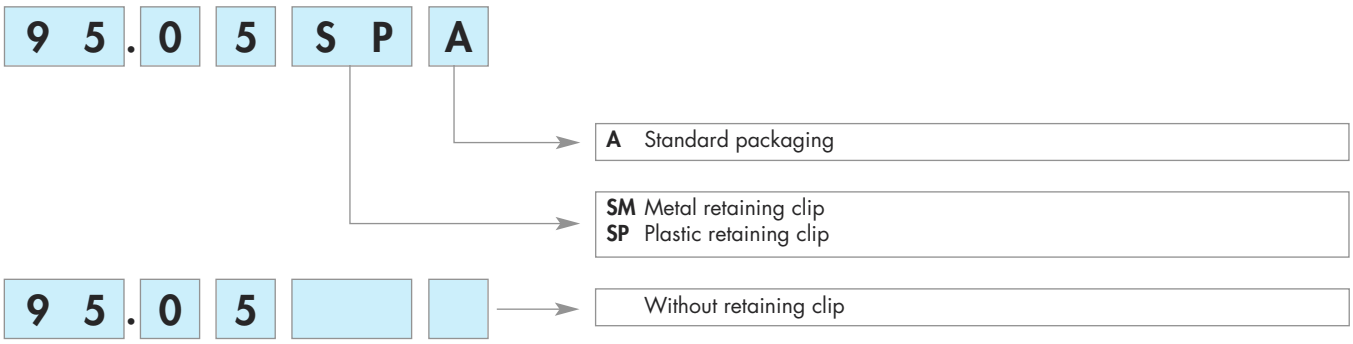
Packaging codes

How to code and identify retaining clip and packaging options for sockets.

Example:



Features

1 & 2 Pole - Low profile (15.7 mm height)
41.31 - 1 Pole 12 A (3.5 mm pin pitch)
41.52 - 2 Pole 8 A (5 mm pin pitch)
41.61 - 1 Pole 16 A (5 mm pin pitch)

PCB mount
- direct or via PCB socket
35 mm rail mount
- via screw and screwless sockets

- AC and DC coils
- 8 mm, 6 kV (1.2/50 µs) isolation, coil-contacts
- Cadmium Free contact materials
- Flux proof: RT II standard, (RT III option)

41.31	41.52	41.61
		
• 3.5 mm contact pin pitch • 1 Pole 12 A • PCB direct or via socket	• 5 mm contact pin pitch • 2 Pole 8 A • PCB direct or via socket	• 5 mm contact pin pitch • 1 Pole 16 A • PCB direct or via socket

Contact specification

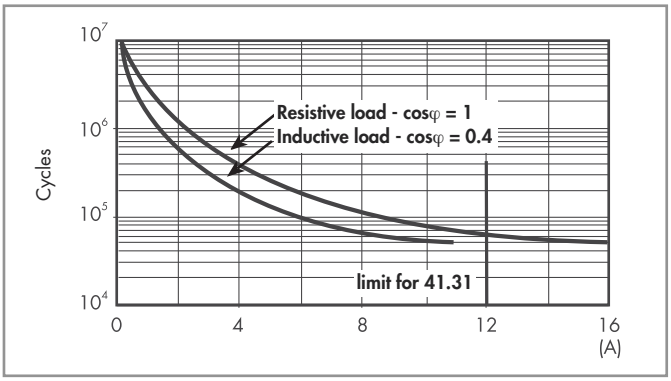
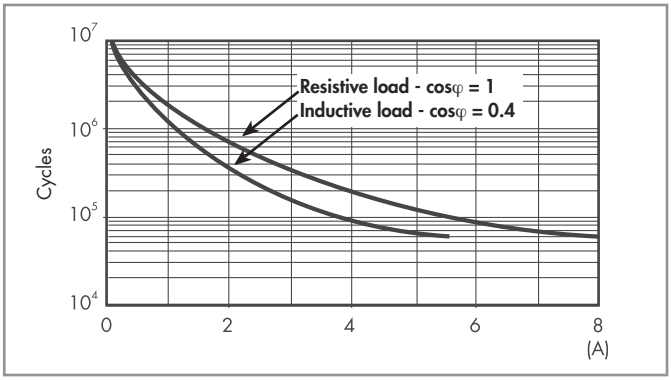
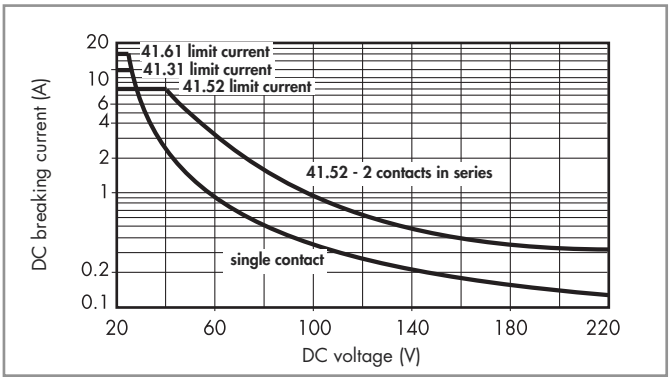
F 41 - Electrical life (AC) v contact current
Types 41.31/61



F 41 - Electrical life (AC) v contact current
Type 41.52



H 41- Maximum DC1 breaking capacity



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ 100·10³ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load. Note: the release time for the load will be increased.

Coil specifications

AC coil data

Nominal voltage U_N	Coil code	Operating range U_{min}	Operating range U_{max}	Resistance R	Rated coil consumption I at U_N

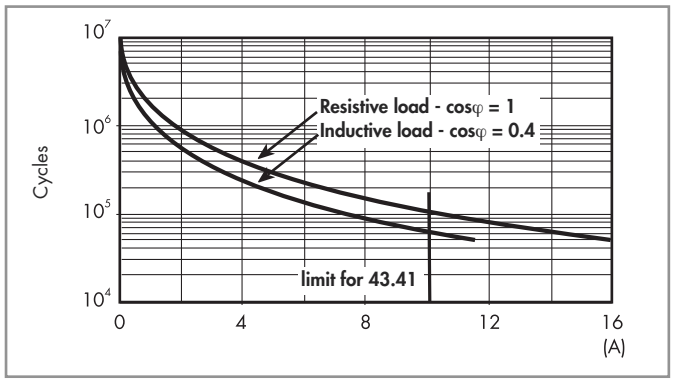
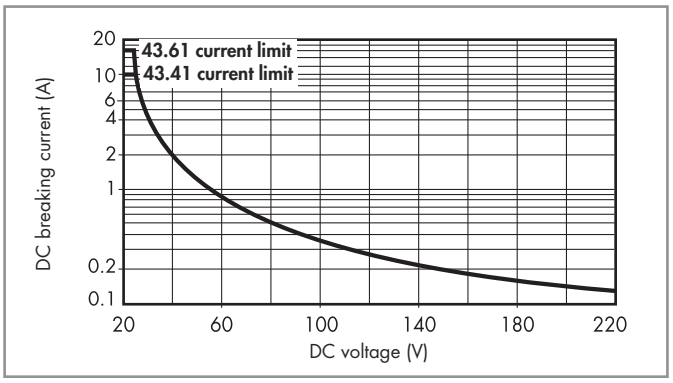
Shock resistance		g	15	
Power lost to the environment	without contact current	W	0.25 (43.41)	0.4 (43.61)
	with rated current	W	1.3 (43.41)	2 (43.61)
Recommended distance between relays mounted on PCB		mm	≥ 5	

Contact specification

F 43 - Electrical life (AC) v contact current



H 43 - Maximum DC1 breaking capacity



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $100 \cdot 10^3$ for 43.41 and ≥ $50 \cdot 10^3$ for 43.61 can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load. Note: the release time for the load will be increased.

Coil specifications

DC coil data - 0.25 W sensitive (type 43.41)

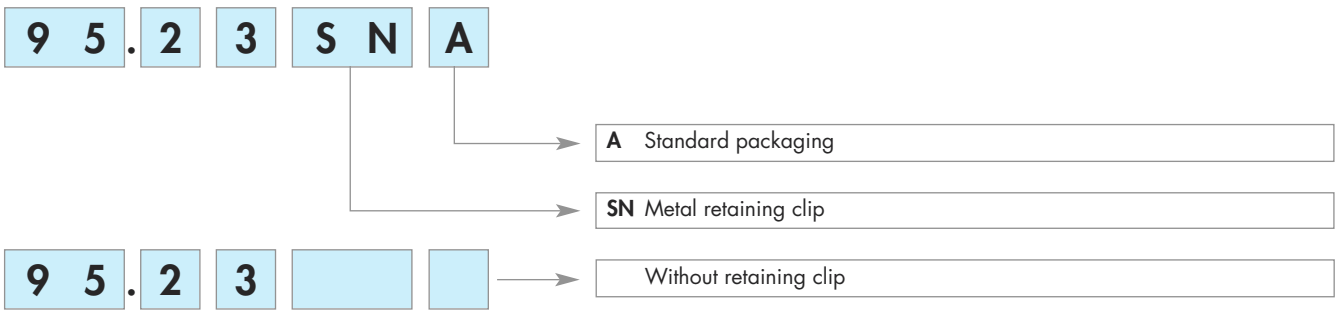
Packaging codes

How to code and identify retaining clip and packaging options for sockets.

Example:



Features

2 Pole relay range
44.52 - 2 Pole 6 A (5 mm pin pitch)
44.62 - 2 Pole 10 A (5 mm pin pitch)

PCB mount - direct or via PCB socket
35 mm rail mount - via screw and screwless sockets

- High physical separation between adjacent contacts
- DC coils (Standard or sensitive)
- Cadmium Free contact materials
- 8 mm, 6 kV (1.2/50 µs) isolation, coil-contacts
- UL Listing (certain relay/socket combinations)
- Flux proof: RT II
- 95 series sockets
- Coil EMC suppression
- Timer accessories 86 series

How to code and identify retaining clip and packaging options for sockets.

Example:

9	5	.	0	5	S	P	A

A Standard packaging

SM Metal retaining clip
SP Plastic retaining clip

9	5	.	0	5			

Without retaining clip

Features

Relay for +105 °C ambient use
PCB mount - direct for coil and contact terminals
- 45.31, 1 Pole normally open
(≥ 3 mm contact gap)

Relays for +125 °C ambient use
PCB mount - Faston 250 contact connections
- 45.71, 1 Pole normally open or normally closed
- 45.91, 1 Pole normally open
(≥ 3 mm contact gap)

- Contact gap ≥ 3 mm according to EN 60730-1 (45.31 and 45.91 type)
- Sensitive DC coil - 360 mW
- Cadmium Free option available
- Reinforced insulation between coil and contacts according to EN 60335-1 (VDE 0700), with safe separation and 8 mm clearance and creepage distance
- 6 kV (1.2/50 µs) isolation, coil-contacts
- Flux proof: RT II standard, (RT III option)

Contact specification

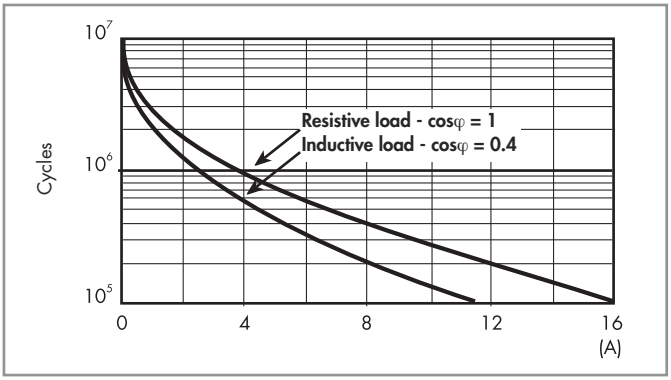
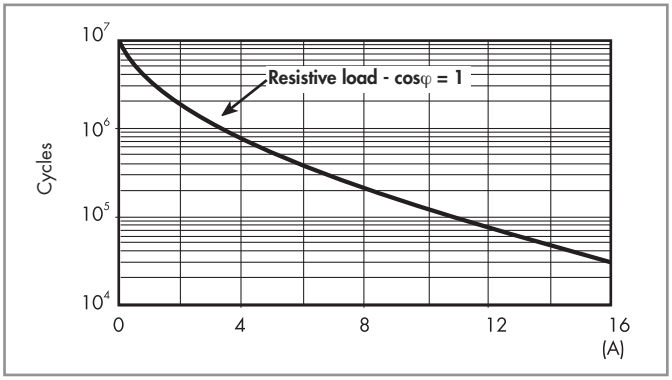
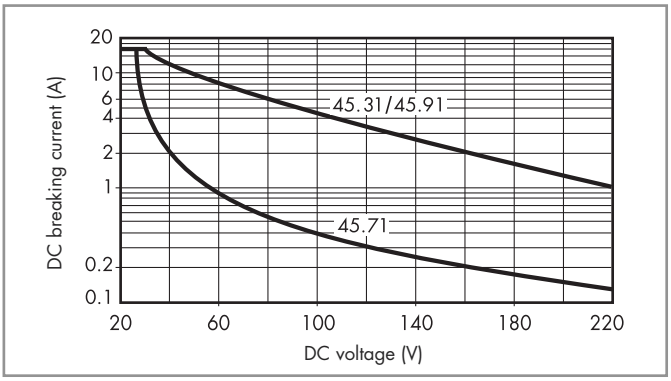
F 45 - Electrical life (AC) v contact current
Type 45.71



F 45 - Electrical life (AC) v contact current
Type 45.31 / 45.91



H 45 - Maximum DC1 breaking capacity



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $100 \cdot 10^3$ cycles (45.71) and ≥ $30 \cdot 10^3$ cycles (45.31, 45.91) can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load.
  Note: the release time for the load will be increased.

Lockable test button and mechanical flag indicator (0040, 0054, 0074)

The dual-purpose Finder test button can be used in two ways:
Case 1) The plastic pip (located directly below the test button) remains intact. In this case, when the test button is pushed, the contacts operate. When the test button is released the contacts return to their former state.
Case 2) The plastic pip is broken-off (using an appropriate cutting tool). In this case, (in addition to the above function), when the test button is pushed and rotated, the contacts are latched in the operating state, and remain so until the test button is rotated back to its former position. In both cases ensure that the test button actuation is swift and decisive.

Packaging codes

How to code and identify retaining clip and packaging options for sockets.

Example:

9 7 . 0 1	S P	A

A Standard packaging

SM Metal retaining clip
SP Plastic retaining clip

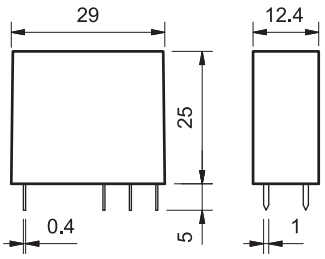
9 7 . 0 1		

Without retaining clip

Features

PCB Relay with forcibly guided contacts according to EN 50205 type B
2 CO contacts *

- High physical separation between adjacent contacts
- Cadmium Free contact materials
- 8 mm, 6 kV (1.2/50 µs) isolation, coil-contacts
- Flux proof: RT II



*According to EN 50205 only 1 NO and 1 NC (11-14 and 21-22 or 11-12 and 21-24) shall be used as forcibly guided contacts.

Contact specification

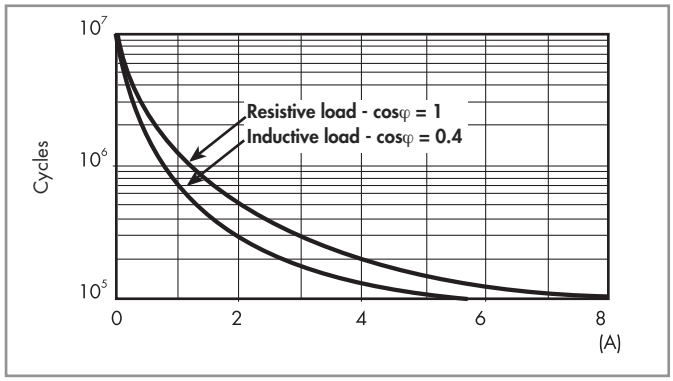
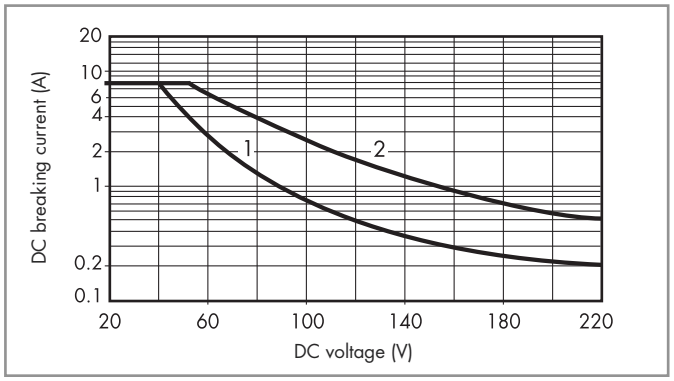
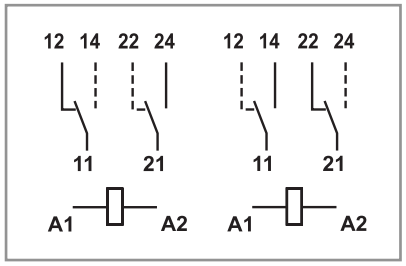
F 50 - Electrical life (AC) v contact current



H 50 - Maximum DC1 breaking capacity



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $100 \cdot 10^3$ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load. Note: the release time for the load will be increased.



Alternative selection of NO and NC contacts to provide Forcibly guided (mechanically linked) contacts, in accordance with EN 50205 (type B).

Lockable test button and mechanical flag indicator (0010, 0040, 0050, 0054, 0070, 0074, 0090, 0094)

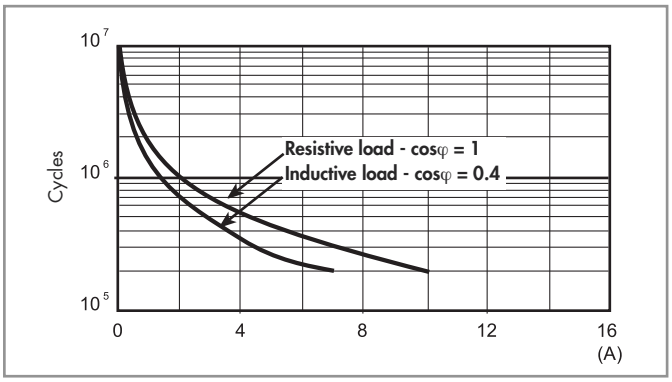
The dual-purpose Finder test button can be used in two ways:
Case 1) The plastic pip (located directly above the test button) remains intact. In this case, when the test button is pushed, the contacts operate. When the test button is released the contacts return to their former state.
Case 2) The plastic pip is broken-off (using an appropriate cutting tool). In this case, (in addition to the above function), when the test button is pushed and rotated, the contacts are latched in the operating state, and remain so until the test button is rotated back to its former position. In both cases ensure that the test button actuation is swift and decisive.

Technical data

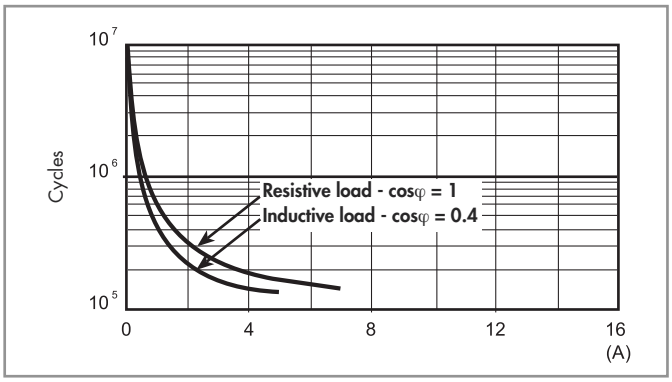
Insulation according to EN 61810-1			2 pole - 3 pole		4 pole
Nominal voltage of supply system		V AC	230/400		230
Rated insulation voltage		V AC	400		250
Pollution degree			2		2
Insulation between coil and contact set					
Type of Insulation			Basic		Basic
Overvoltage category			III		III
Rated impulse voltage		kV (1.2/50 µs)	4		4
Dielectric strength		V AC	2,000		2,000
Insulation between adjacent contacts					
Type of insulation			Basic		Basic
Overvoltage category			III		II
Rated impulse voltage		kV (1.2/50 µs)	4		2.5
Dielectric strength		V AC	2,000		2,000
Insulation between open contacts					
Type of disconnection			Micro-disconnection		Micro-disconnection
Dielectric strength		V AC/kV (1.2/50 µs)	1,000/1.5		1,000/1.5
Conducted disturbance immunity					
Burst (5...50)ns, 5 kHz, on A1 - A2			EN 61000-4-4		level 4 (4 kV)
Surge (1.2/50 µs) on A1 - A2 (differential mode)			EN 61000-4-5		level 4 (4 kV)
Other data					
Bounce time: NO/NC		ms	1/3		
Vibration resistance (5...55)Hz: NO/NC		g	15/15		
Shock resistance		g	16		
Power lost to the environment	without contact current	W	1		
	with rated current	W	3 (2 pole)	4 (3 pole)	3 (4 pole)
Recommended distance between relays mounted on PCB		mm	≥ 5		

Contact specification

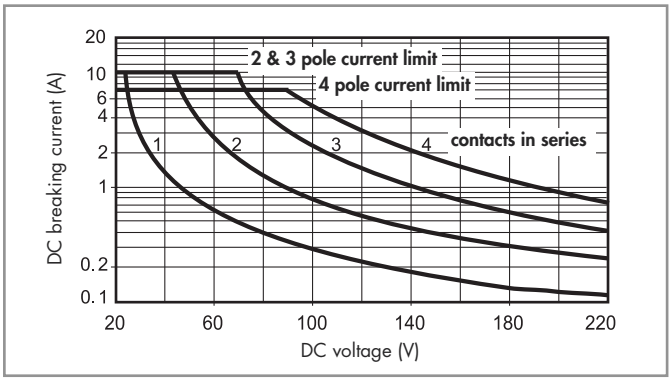
F 55 - Electrical life (AC) v contact current
2 and 3 pole relays



F 55 - Electrical life (AC) v contact current
4 pole relay



H 55 - Maximum DC1 breaking capacity



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $100 \cdot 10^3$ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load.
  Note: the release time for the load will be increased.

Coil specifications

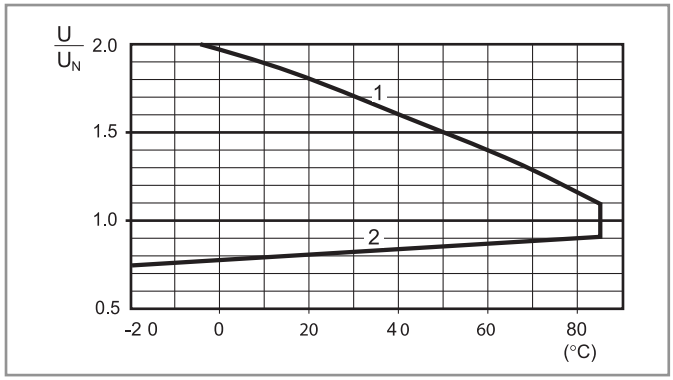
DC coil data

Nominal voltage U_N	Coil code	Operating range U_{min}	Operating range U_{max}	Resistance R	Rated coil consumption I at U_N
V		V	V	Ω	mA
6	**9**.006	4.8	6.6	40	150
12	**9**.012	9.6	13.2	140	86
24	**9**.024	19.2	26.4	600	40
48	**9**.048	38.4	52.8	2,400	20
60	**9**.060	48	66	4,000	15
110	**9**.110	88	121	12,500	8.8
125	**9**.125	100	138	17,300	7.2
220	**9**.220	176	242	54,000	4

AC coil data

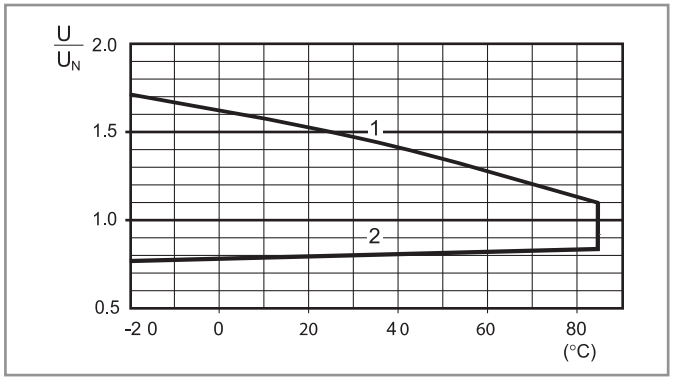
Nominal voltage U_N	Coil code	Operating range U_{min}	Operating range U_{max}	Resistance R	Rated coil consumption I at U_N (50Hz)
V		V	V	Ω	mA
6	**8**.006	4.8	6.6	12	200
12	**8**.012	9.6	13.2	50	97
24	**8**.024	19.2	26.4	190	53
48	**8**.048	38.4	52.8	770	25
60	**8**.060	48	66	1,200	21
110	**8**.110	88	121	4,000	12.5
120	**8**.120	96	132	4,700	12
230	**8**.230	184	253	17,000	6
240	**8**.240	192	264	19,100	5.3

R 55 - DC coil operating range v ambient temperature



1 - Max. permitted coil voltage.
2 - Min. pick-up voltage with coil at ambient temperature.

R 55 - AC coil operating range v ambient temperature



1 - Max. permitted coil voltage.
2 - Min. pick-up voltage with coil at ambient temperature.

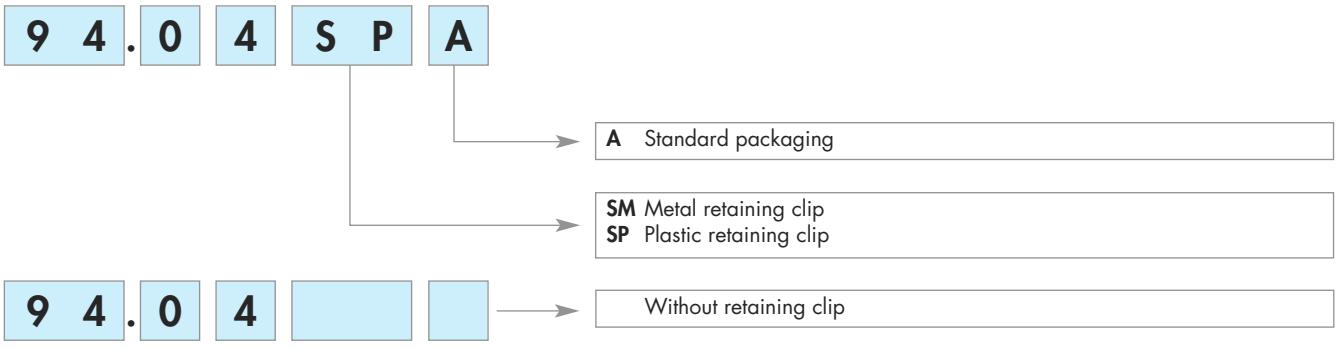
Packaging codes

How to code and identify retaining clip and packaging options for sockets.

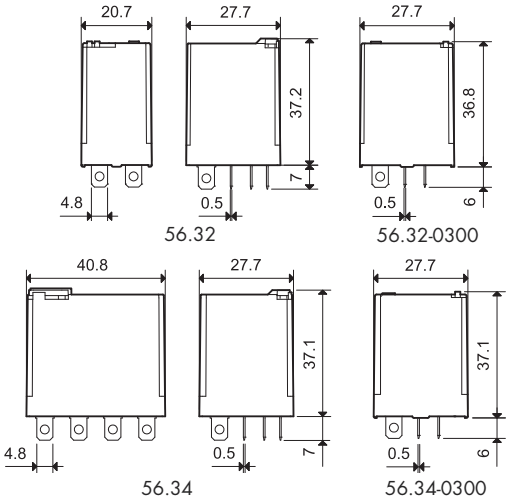
Example:



Features

Plug-in - 12 A Power relay, 2 & 4 pole

- Flange mount option - (Faston 187, 4.8x0.5 mm termination)
- AC coils & DC coils
- Lockable test button and mechanical flag indicator
- Cadmium Free contacts (standard version)
- Contact material options
- 96 series sockets
- Coil EMC suppression
- Accessories
- European Patent



* For 4 CO (4PDT) or 4 NO only.

FOR UL RATINGS SEE:
"General technical information" page V

56.32/56.34

- 2 or 4 pole changeover contact
- Plug-in/Faston 187

56.32-0300/56.34-0300

- 2 or 4 pole normally open contact (≥1.5 mm gap)
- Plug-in/Faston 187

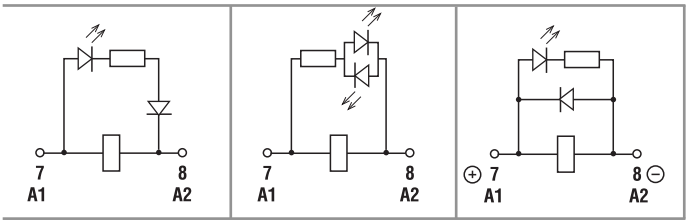
Special versions for Rail Applications on request

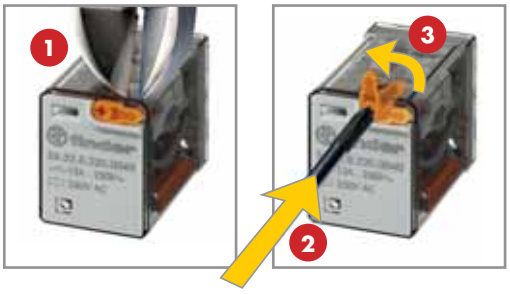
Descriptions: options and special versions



C: Option 3, 5, 54
LED (AC)

C: Option 6, 7, 74
Double LED
(DC non-polarized)

C: Option 8, 9, 94
LED + diode (DC, polarity positive to pin 7) - (56.32 only)



Lockable test button and mechanical flag indicator (0040, 0050, 0054, 0070, 0074, 0090, 0094)
The dual-purpose Finder test button can be used in two ways:
Case 1) The plastic pip (located directly above the test button) remains intact. In this case, when the test button is pushed, the contacts operate. When the test button is released the contacts return to their former state.

Case 2) The plastic pip is broken-off (using an appropriate cutting tool). In this case, (in addition to the above function), when the test button is pushed and rotated, the contacts are latched in the operating state, and remain so until the test button is rotated back to its former position.

In both cases ensure that the test button actuation is swift and decisive.

Technical data

*Only in applications where over voltage category II is permitted. In applications of over voltage category III: Micro-disconnection.

Insulation according to EN 61810-1			2 CO - 4 CO		2 NO - 4 NO

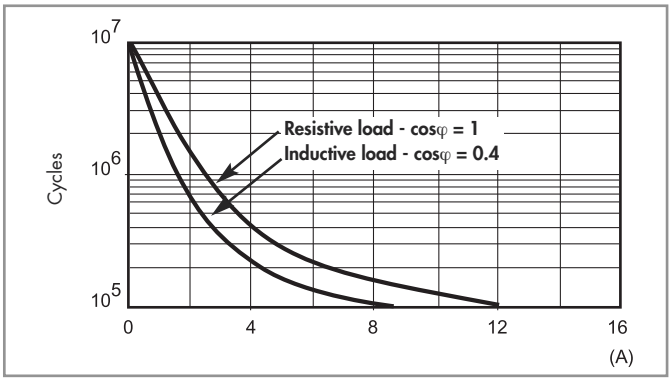
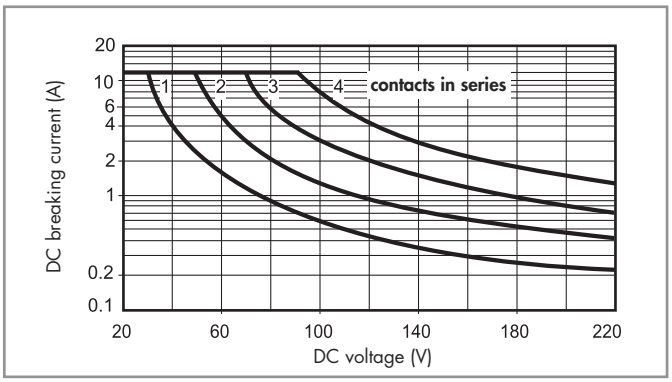
Contact specification

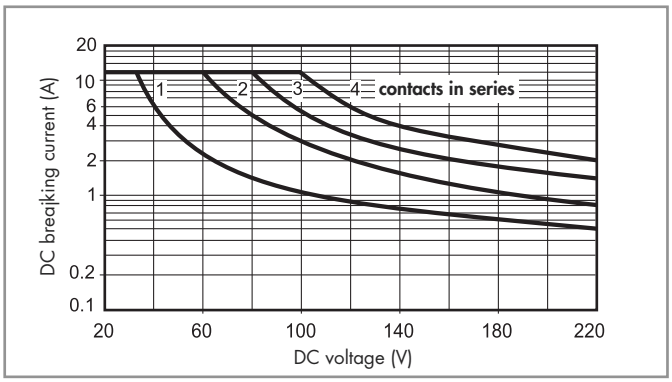
F 56 - Electrical life (AC) v contact current
2 - 4 pole relays



H 56 - Maximum DC1 breaking capacity
Changeover version



H 56 - Maximum DC1 breaking capacity
Normally open version



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ 100·10³ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load.
  Note: the release time of the load will be increased.

Packaging code

How to code and identify retaining clip and packaging options for sockets.

Example:

9 6 . 7	4	S M	A

A Standard packaging

SM Metal retaining clip
SP Plastic retaining clip

9 6 . 7	4		

Without retaining clip

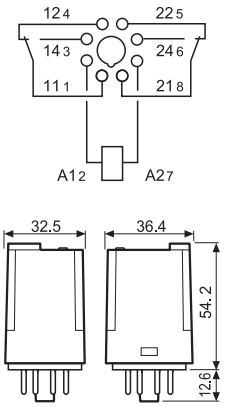
Features

Plug-in mount
10 A General purpose relay

- 2 & 3 pole changeover contacts
- Cadmium Free contacts (preferred version)
- AC coils & DC coils
- UL Listing (certain relay/socket combinations)
- Contact material options
- Lockable test button with mechanical flag indicator (preferred version)
- 90 series sockets
- Coil EMC suppression
- Timer accessories 86 series
- European Patent

60.12

- 2 pole, 10 A power contacts
- 8 pin plug-in



60.13

- 3 pole, 10 A power contacts
- 11 pin plug-in

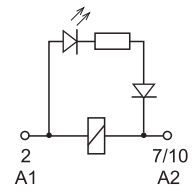
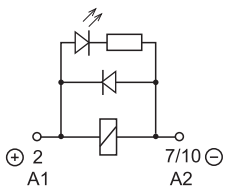
Descriptions: Options and Special versions



C: Option 3, 5, 54
LED (AC)



C: Option 6, 7, 74
LED + diode (DC, polarity positive to pin 2)

Lockable test button and mechanical flag indicator (0040, 0050, 0054, 0070, 0074)

The dual-purpose Finder test button can be used in two ways:
Case 1) The plastic pip (located directly above the test button) remains intact. In this case, when the test button is pushed, the contacts operate. When the test button is released the contacts return to their former state.
Case 2) The plastic pip is broken-off (using an appropriate cutting tool). In this case, (in addition to the above function), when the test button is pushed and rotated, the contacts are latched in the operating state, and remain so until the test button is rotated back to its former position. In both cases ensure that the test button actuation is swift and decisive.

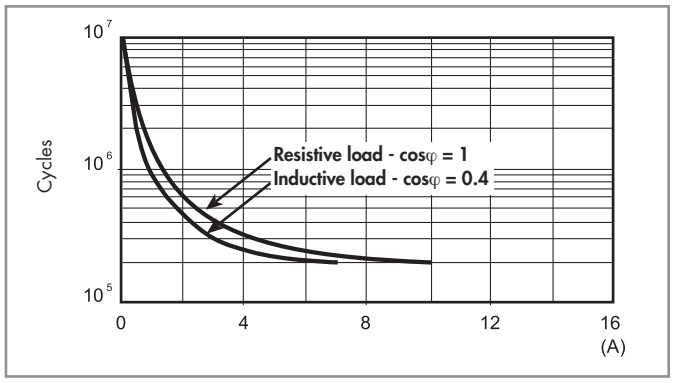
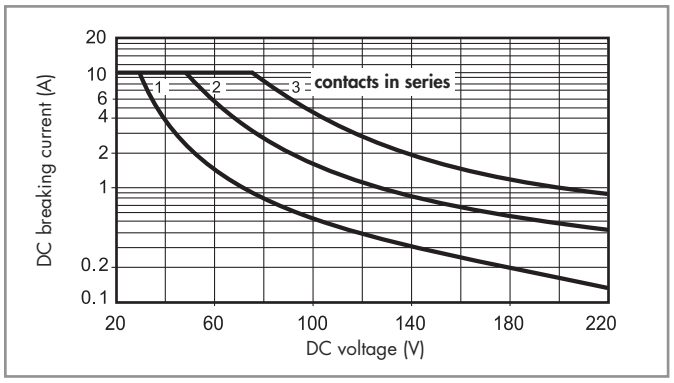
Contact specification

F 60 - Electrical life (AC) v contact current



H 60 - Maximum DC1 breaking capacity



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $100 \cdot 10^3$ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load. Note: the release time for the load will be increased.

Coil specifications

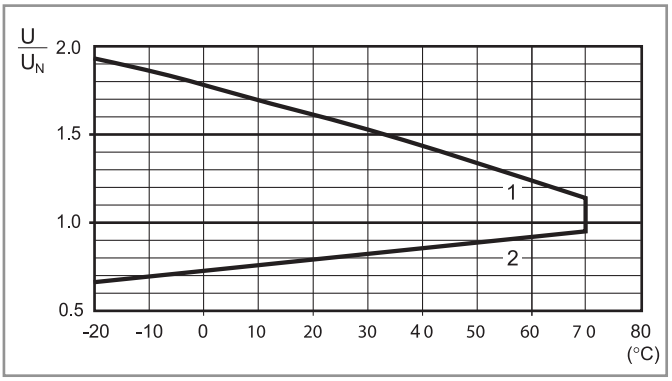
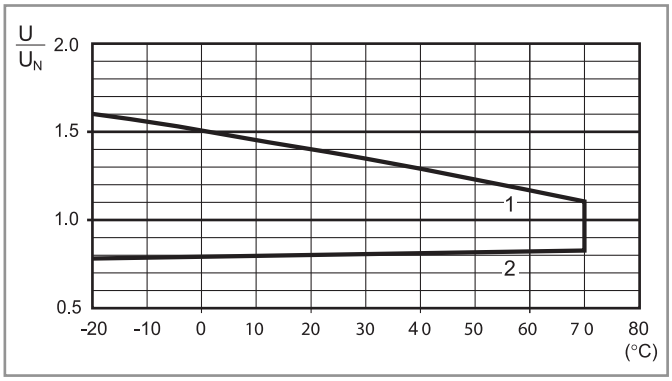
R 60 - DC coil operating range v ambient temperature



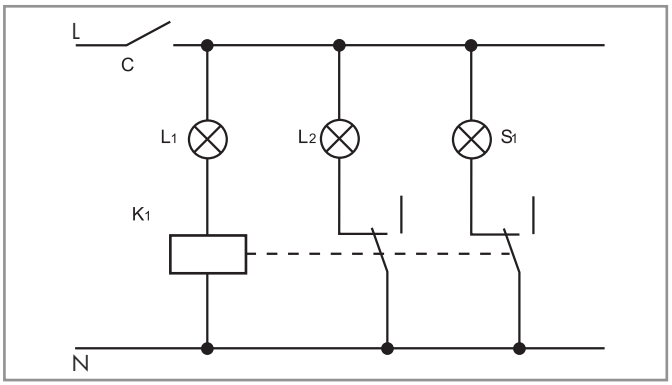
1 - Max. permitted coil voltage.
2 - Min. pick-up voltage with coil at ambient temperature.

R 60 - AC coil operating range v ambient temperature



1 - Max. permitted coil voltage.
2 - Min. pick-up voltage with coil at ambient temperature.

Current sensing version



Typical application with current sensing relays.
An open circuit filiment of lamp L1 is detected by the current sensing relay coil (K1) which causes the back-up safety lamp L2 to be energised, and indication of failure at the control panel via lamp S1.
Example: navigation light.
L1 = Light
L2 = Safety light
S1 = Control light
K1 = Relay

Features

Printed circuit mount
16 A Power relay

- 2 & 3 Pole changeover contacts or NO (≥ 3 mm contact gap)
- AC coils & DC coils
- Reinforced insulation between coil and contacts according to EN 60335-1, with 6 mm clearance & 8 mm creepage distance
- SELV coil-contact separator option
- Cadmium Free contact material options

62.22 / 62.23

- 2 & 3 pole changeover contact
- PCB mount

62.22-0300 / 62.23-0300

- 2 & 3 pole normally open contact (≥ 3 mm contact gap)
- PCB mount

B: Contact circuit 5, 6
Additional physical separator between coil and contacts (for SELV applications)

Lockable test button and mechanical flag indicator (0040, 0050, 0054, 0070, 0074)

The dual-purpose Finder test button can be used in two ways:
Case 1) The plastic pip (located directly above the test button) remains intact. In this case, when the test button is pushed, the contacts operate. When the test button is released the contacts return to their former state.
Case 2) The plastic pip is broken-off (using an appropriate cutting tool). In this case, (in addition to the above function), when the test button is pushed and rotated, the contacts are latched in the operating state, and remain so until the test button is rotated back to its former position. In both cases ensure that the test button actuation is swift and decisive.

Technical data

Insulation according to EN 61810-1					
		2 CO - 3 CO		**2 NO - 3 NO**	
Nominal voltage of supply system	V AC	230/400		230/400

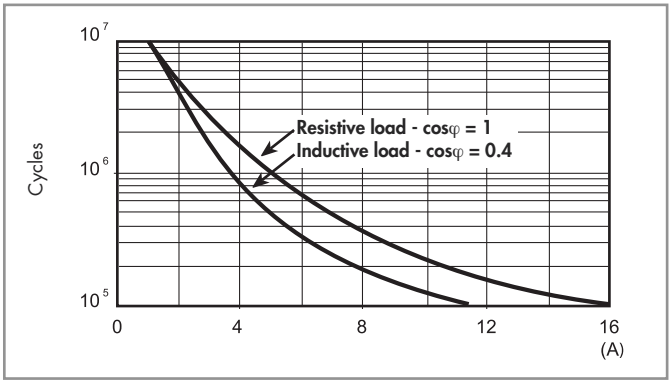
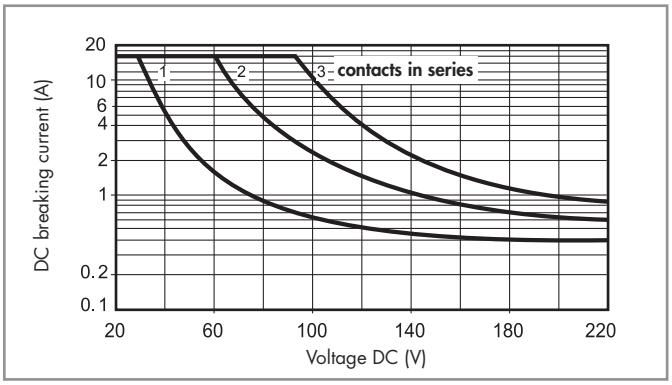
Contact specification

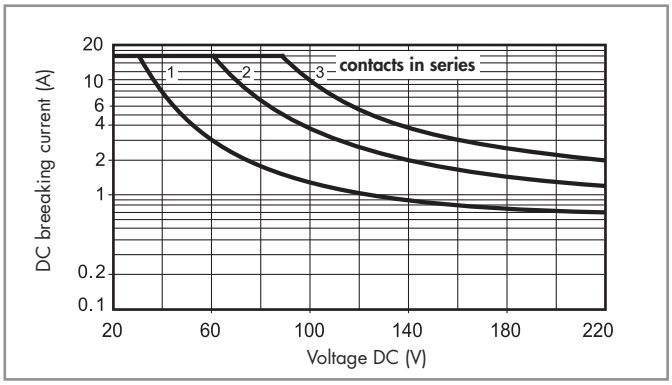
F 62 - Electrical life (AC) v contact current



H 62 - Maximum DC1 breaking capacity
Changeover contacts



H 62 - Maximum DC1 breaking capacity
Normally open contacts



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $100 \cdot 10^3$ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load.
  Note: the release time of the load will be increased.

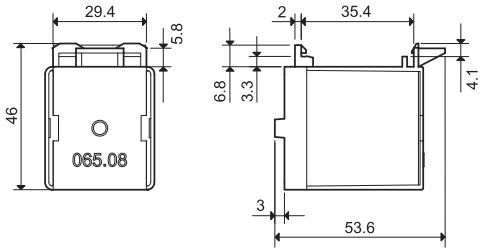
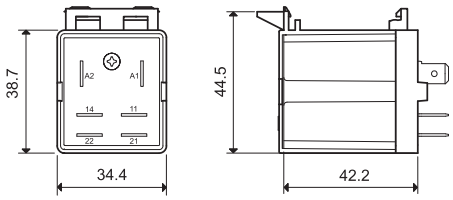
065.08 with relay

Rear 35 mm rail (EN 60715) mount for types 65.31.xxxx.xxx9 | 065.08



065.08



065.08 with relay

Features

2 Pole Changeover (DPDT)
30 A Power relay

66.22 PCB connections & mount
66.82 Faston 250 connections
- Flange mount

- Reinforced insulation between coil and contacts according to EN 60335-1; 8 mm creepage and clearance distances
- AC coils & DC coils
- Cadmium Free option available

	66.22	66.82
		
	• 30 A rated contacts • PCB mount - bifurcated terminals	• 30 A rated contacts • Flange mount • Faston 250 connections
					Copper side view

Features

2 Pole NO (DPST-NO), ≥1.5mm contact gap
30 A Power relay

66.22-x600 **PCB mount**
66.22-x600S **PCB mount - 5 mm gap between PCB and relay base**
66.82-x600 **Faston 250 connections - Flange mount**

- ≥1.5 mm contact gap (according to VDE 0126-1-1 for solar inverter applications)
- Reinforced insulation between coil and contacts according to EN 60335-1; 8 mm creepage and clearance distances
- Wash tight version (RT III) available
- DC coils
- Cadmium Free option available

66.82	AC-DC	**0** - 1	**0** - 3	**0**	**0** - 1
	DC	**0** - 1	**6**	**0**	**0** - 1

Technical data

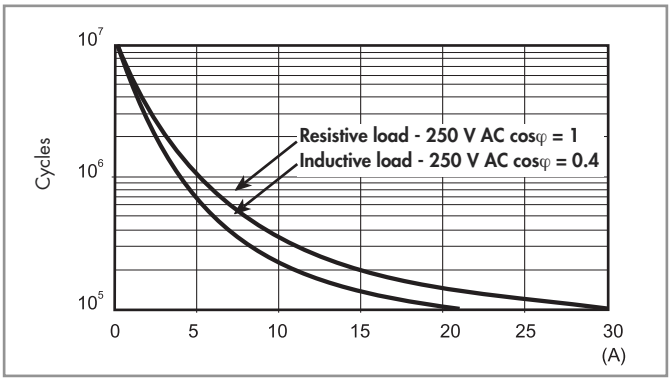
Insulation according to EN 61810-1				
Nominal voltage of supply system		V AC	230/400	
Rated insulation voltage		V AC	400	
Pollution degree			3	
Insulation between coil and contact set				
Type of insulation			Reinforced (8 mm)	
Overvoltage category			III	
Rated impulse voltage		kV (1.2/50 µs)	6	
Dielectric strength		V AC	4,000	
Insulation between adjacent contacts				
Type of insulation			Basic	
Overvoltage category			III	
Rated impulse voltage		kV (1.2/50 µs)	4	
Dielectric strength		V AC	2,500	
Insulation between open contacts			**2 CO**	**2 NO, ≥1.5mm (x600 version)**
Type of disconnection			Micro-disconnection	Full-disconnection *
Overvoltage category			—	II
Rated impulse voltage		kV (1.2/50 µs)	—	2.5
Dielectric strength		V AC/kV (1.2/50 µs)	1,500/2	2,500/3
Conducted disturbance immunity				
Burst (5...50)ns, 5 kHz, on A1 - A2			EN 61000-4-4	level 4 (4 kV)
Surge (1.2/50 µs) on A1 - A2 (differential mode)			EN 61000-4-5	level 4 (4 kV)
Other data				
Bounce time: NO/NC		ms	7/10	
Vibration resistance (10...150)Hz: NO/NC		g	20/19	
Shock resistance		g	20	
Power lost to the environment	without contact current	W	2.3	
	with rated current	W	5	
Recommended distance between relays mounted on PCB		mm	≥ 10	

* Only in applications where over voltage category II is permitted. In applications of over voltage category III: Micro-disconnection.

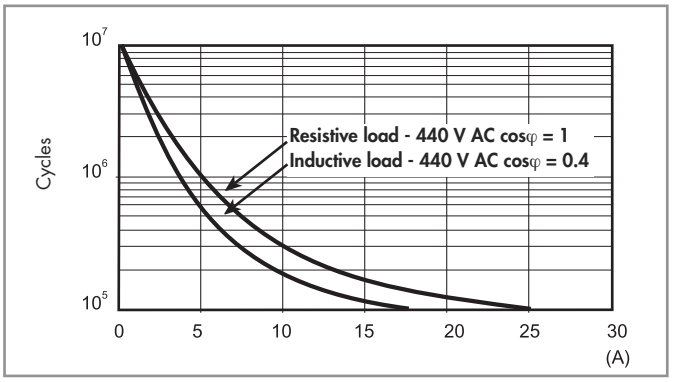
VII-2012, www.findernet.com

Contact specification

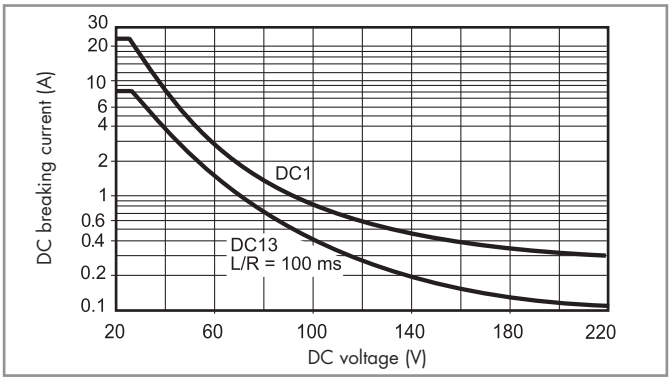
F 66 - Electrical life (AC) v contact current
250 V (normally open contact)



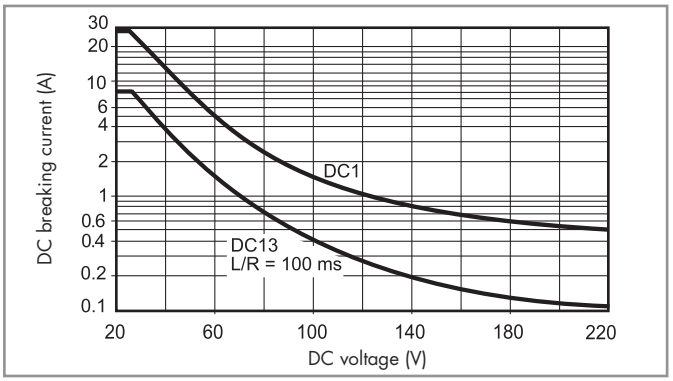
F 66 - Electrical life (AC) v contact current
440 V (normally open contact)



H 66 - Maximum DC breaking capacity



H 66 - Maximum DC breaking capacity, x600 versions (>1.5mm contact gap)



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $100 \cdot 10^3$ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load.
  Note: the release time for the load will be increased.

Coil specifications

Features

Single output - solid state relay interface modules, 6.2 mm wide.

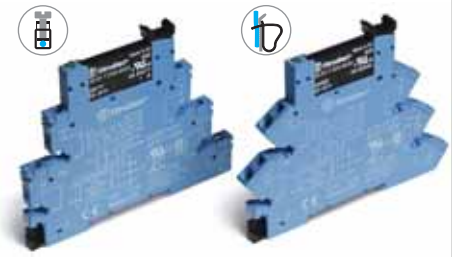
Ideal interface for PLC and electronic systems

- DC, AC or AC/DC input versions
- Supplied with integral coil indication and protection circuit
- Silent, high switching speed and long electrical life
- Instant ejection of relay using plastic retaining clip
- UL Listing (certain relay/socket combinations)
- 35 mm rail (EN 60715) mounting

38.81 / 38.81.3
Screw terminal

38.91 / 38.91.3
Screwless terminal

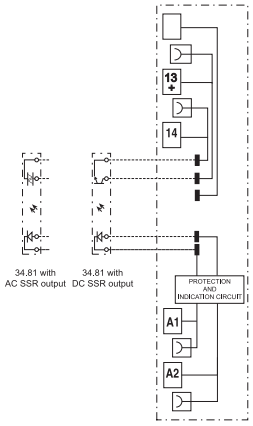
38.81/38.91

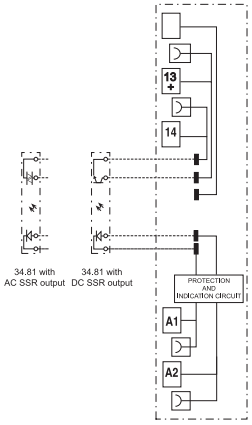


- AC or DC output switching
- SSR relay - DC input voltage
- Screw terminal and screwless terminal
- 35 mm rail (EN 60715) mounting

38.81.3/38.91.3

- Leakage current suppression
- AC or DC output
- SSR relay - AC or AC/DC input voltage
- Screw terminal and screwless terminal
- 35 mm rail (EN 60715) mounting





For outline drawing see page 12

38 Series - Relay interface modules - 1 Pole 16A and 2 Pole 8A EMR

Features

Electromechanical relay interface modules, 14 mm wide.
38.01 and 38.11 - 1 Pole 16 A
38.52 and 38.62 - 2 Pole 8 A

Ideal interface for PLC and electronic systems

- Sensitive DC coil or AC/DC coil versions
- Integral coil indication and protection circuit
- Instant ejection of relay using plastic retaining clip
- UL Listing (certain relay/socket combinations)
- 35 mm rail (EN 60715) mounting

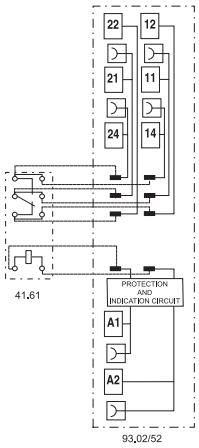
38.01/52
Screw terminal

38.11/62
Screwless terminal

For outline drawing see page 12

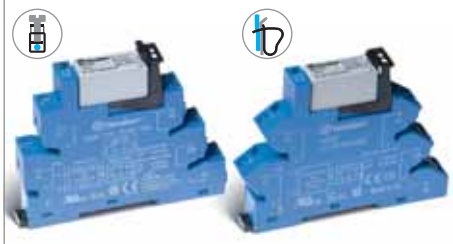
38.01/38.11

- Screw terminal and screwless terminal
- 1 pole electromechanical relay
- 35 mm rail (EN 60715) mounting

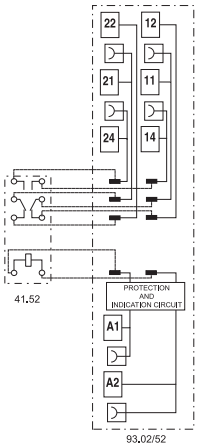


* For currents >10 A, contact terminals must be connected in parallel (21 with 11, 24 with 14, 22 with 12).

38.52/38.62



- Screw terminal and screwless terminal
- 2 pole electromechanical relay
- 35 mm rail (EN 60715) mounting



Contact specification			
Contact configuration		1 CO (DPDT)	2 CO (DPDT)
Rated current/Maximum peak current	A	16*/30	8/15
Rated voltage/Maximum switching voltage	V AC	250/400	250/400
Rated load AC1	VA	4,000	2,000
Rated load AC15 (230 V AC)	VA	750	400
Single phase motor rating (230 V AC)	kW	0.5	0.3
Breaking capacity DC1: 30/110/220 V	A	16/0.3/0.12	8/0.3/0.12
Minimum switching load	mW (V/mA)	300 (5/5)	300 (5/5)

Protection category		IP 20	IP 20
Approvals relay (according to type)		CE cULus RINA	

Features

Single output - solid state relay interface modules, 14 mm wide

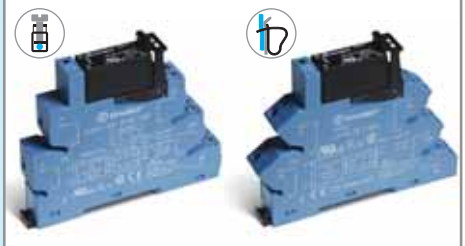
Ideal interface for PLC and electronic systems

- DC input versions
- Supplied with integral coil indication and protection circuit
- Silent, high switching speed and long electrical life
- Instant ejection of relay using plastic retaining clip
- UL Listing (certain relay/socket combinations)
- 35 mm rail (EN 60715) mounting

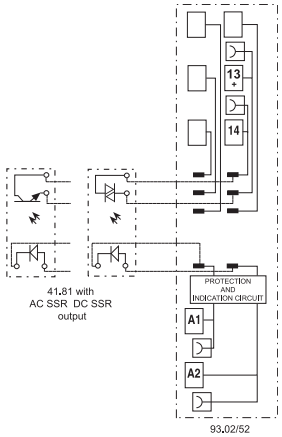
38.31
Screw terminal

38.41
Screwless terminal

38.31/38.41



- Screw terminal and screwless terminal
- AC or DC output switching
- SSR relay - DC input voltage
- 35 mm rail (EN 60715) mounting



For outline drawing see page 12

Output specification			
Contact configuration		1 NO (SPST-NO)	1 NO (SPST-NO)

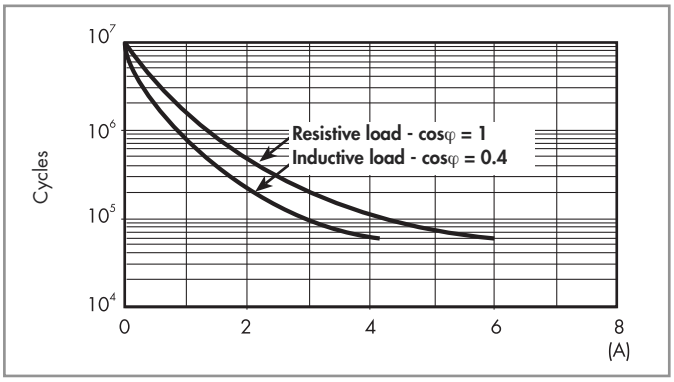
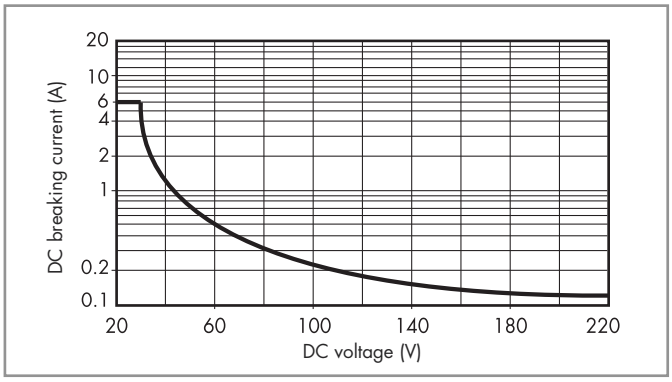
Contact specification - 1 & 2 Pole Electromagnetic Relays

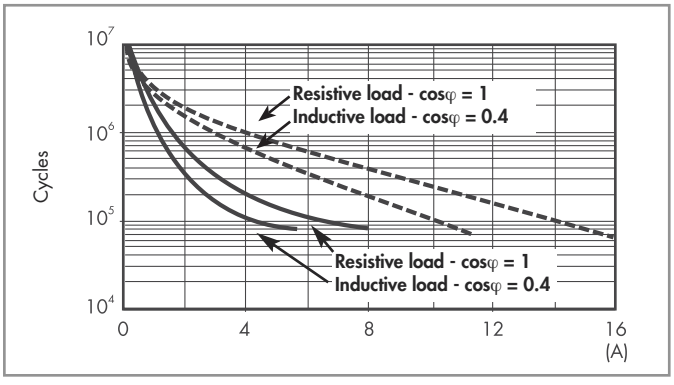
F 38 - Electrical life (AC) v contact current, 1 Pole 6 A



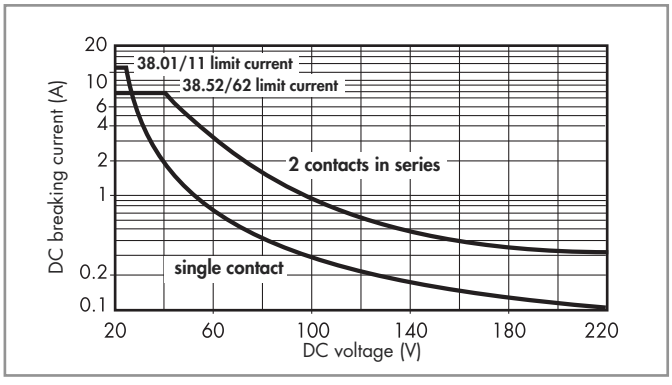
H 38 - Maximum DC1 breaking capacity, 1 Pole 6 A



F 38 - Electrical life (AC) v contact current, 1 Pole 16 A and 2 Pole 8 A



H 38 - Maximum DC1 breaking capacity, 1 Pole 16 A and 2 Pole 8 A



——— : 2 Pole 8 A
--------- : 1 Pole 16 A

- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $60 \cdot 10^3$ (1 Pole) or ≥ $80 \cdot 10^3$ (2 Pole) can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load. Note: the release time for the load will be increased.

Coil specifications - 1 Pole 6 A Electromechnical Relay

(*) Rated coil consumption and power consumption values relate to U_N = 125 and 240 V.

The 38 Series interface modules (supply version 3) have built-in leakage current suppression to address industry concerns of the contacts not dropping-out when there is residual current in the circuit; at (110...125)V AC and (230...240)V AC.

This problem can occur, for example, when connecting the interface modules to PLC,s with triac outputs or when connecting via relatively long cables.

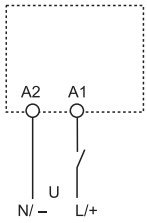
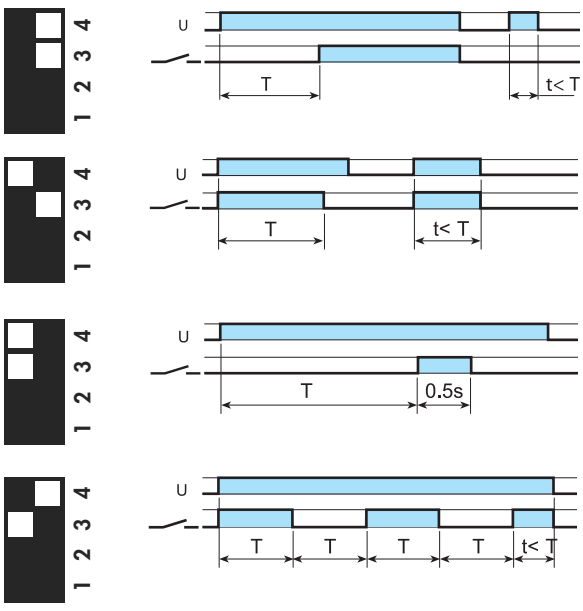
Wiring diagram

U = Supply voltage = Output contact





(AI) On-delay.
Apply power to timer.
Output contacts transfer after preset time has elapsed.
Reset occurs when power is removed.

(DI) Interval.
Apply power to timer.
Output contacts transfer immediately.
After the preset time has elapsed, contacts reset.

(GI) Pulse delayed.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs after a fixed time of 0.5s.

(SW) Symmetrical flasher (starting pulse on).
Apply power to timer.
Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied.
The ratio is 1:1 (time on = time off).

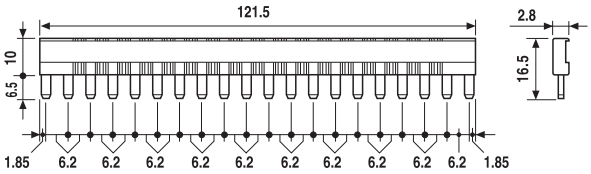
(according to type):

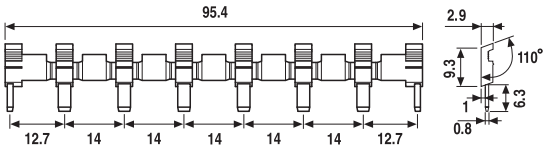
20-way jumper link for 38.21/51/61/81/91	093.20 (blue)	093.20.0 (black)	093.20.1 (red)
Rated values	36 A - 250 V		



093.08

Approvals
(according to type):

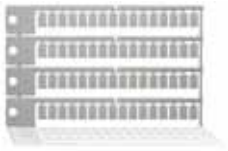
8-way jumper link for 38.01/11/31/41/52/62	093.08 (blue)	093.08.0 (black)	093.08.1 (red)
Rated values	10 A - 250 V		



093.01

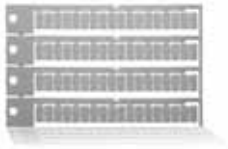
Plastic separator	093.01

Thickness 2 mm, required at the start and the end of a group of interfaces.
Can be used for visual separation group, must be used for:
- protective separation of different voltages of neighbouring PLC interfaces according to VDE 0106-101
- protection of cut jumper links



093.64

Sheet of marker tags for 38.21/51/61/81/91, plastic, 64 tags, 6x10 mm	093.64



060.72

Sheet of marker tags for 38.01/11/31/41/52/62, plastic, 72 tags, 6x12 mm	060.72

Common features • Space saving 6.2 mm wide • Connections for 16-way jumper link • Integral coil indication and protection circuit • Secure retention and easy ejection by plastic clip • Dual screw head (blade+cross) terminals • 35 mm rail mounting (EN 60715)	**EMR** **Electromechanical Relays** • **1 CO 6 A 250 V AC** • High switching capability	**SSR** **Solid State Relays** • 1 solid state output (options **0.1 A 48 V DC, 2 A 24 V DC, 2 A 240 V AC**) • Silent, high speed switching, long electrical life
Master**BASIC • For general use in any type of system • **EMR: 6 to 24 V AC/DC and 230 V AC supply** • **SSR: 6 to 24 V DC and 230 V AC supply**	**39.11**  **Page 4**	**39.10**  **Page 5**
Master**PLUS • Accepts the output fuse module, for the easy and space efficient protection of output circuits • **EMR: 6 to 125 V AC/DC, 125 and 220 V DC, 230 V AC supply** • **SSR: 24 - 125 V AC/DC, 6 to 220 V DC and 230 V AC supply** • **Special 125 and 230 V AC leakage current suppression types (39.31.3 EMR and 39.30.3 SSR)**	**39.31 - 39.31.3**  **Page 6**	**39.30 - 39.30.3**  **Page 7**
Master**INPUT • Jumper link option for the quick and easy distribution of supply voltage to proximity switches and similar input devices • **EMR: 6 to 24 V and 125 V AC/DC, 230 V AC supply** • **SSR: 6 - 12 V DC, 24 - 125 V AC/DC, 230 V AC supply**	**39.41**  **Page 8**	**39.40**  **Page 9**
Master**OUTPUT • Jumper link option for the quick and easy distribution of supply voltage to output side and its connection to electromagnetic valves and similar output devices • **EMR:6 to 24 V and 125 V AC/DC, 230 V AC supply** • **SSR: 6 to 24 V DC, 125 V AC/DC, 230 V AC supply**	**39.21**  **Page 10**	**39.20**  **Page 11**
Master**TIMER • Timer adjustment via top mounted rotary knob accessible after assembly • Control signal terminal • DIP-switch for selection of 4 time scales and 8 functions • Output with fuse module option • **EMR and SSR: 12 to 24 V AC/DC supply**	**39.81**  **Page 12**	**39.80**  **Page 13**

*Master**BASIC***

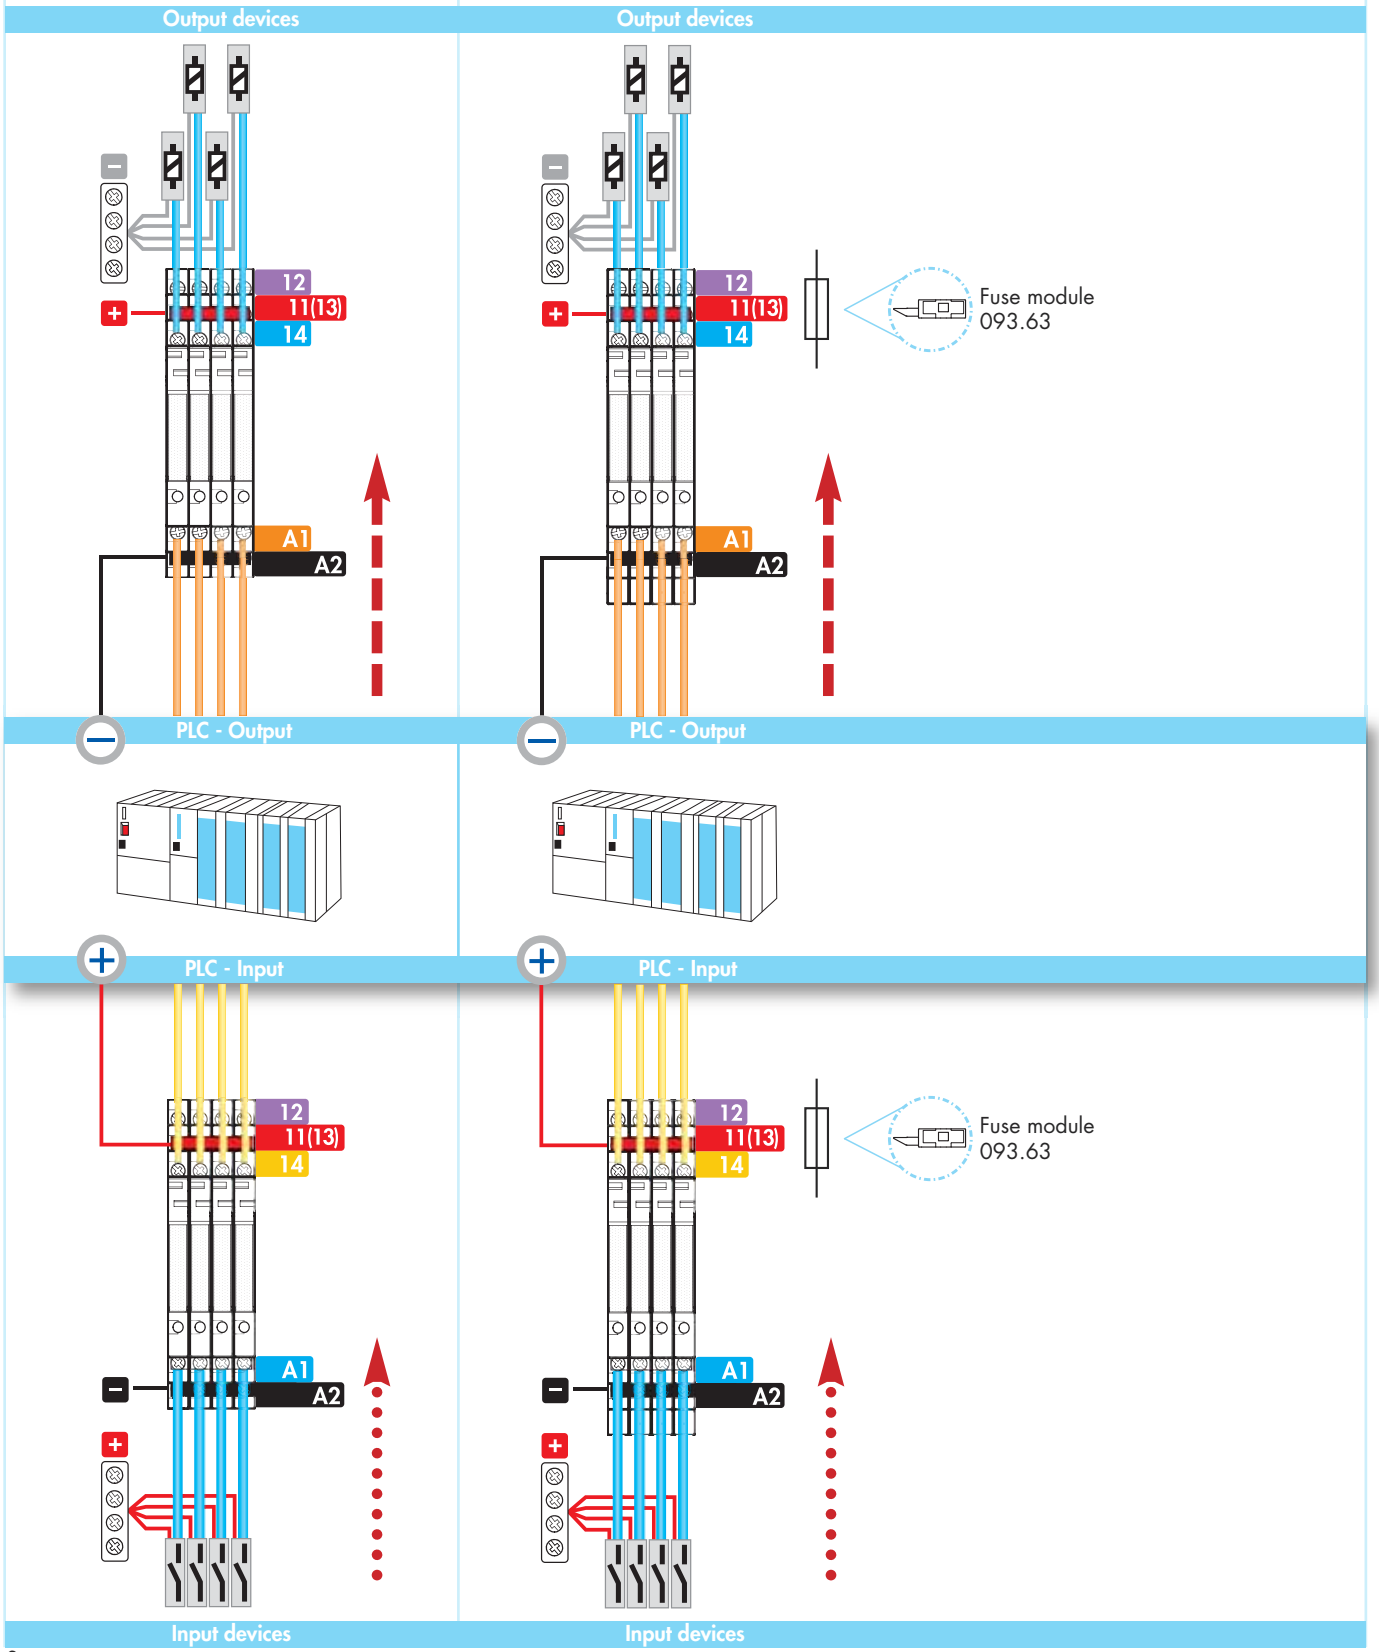
39.11 - 39.10

- For general interface use in any type of system and application.
- Can be used for input interface applications between auxiliary contacts, sensors etc. and controllers, PLCs' or motors. Or for output interface between PLC's controllers and relays, solenoids etc.

*Master**PLUS***

39.31 - 39.30 - 39.31.3 - 39.30.3

- This special version provides extra protection for the output circuit thanks to the replaceable fuse module.
- For general interface use in any type of system and application.
- Can be used for input interface applications between auxiliary contacts, sensors etc. and controllers, PLCs' or motors. Or for output interface between PLC's controllers and relays, solenoids etc.



*Master**INPUT***
39.41 - 39.40

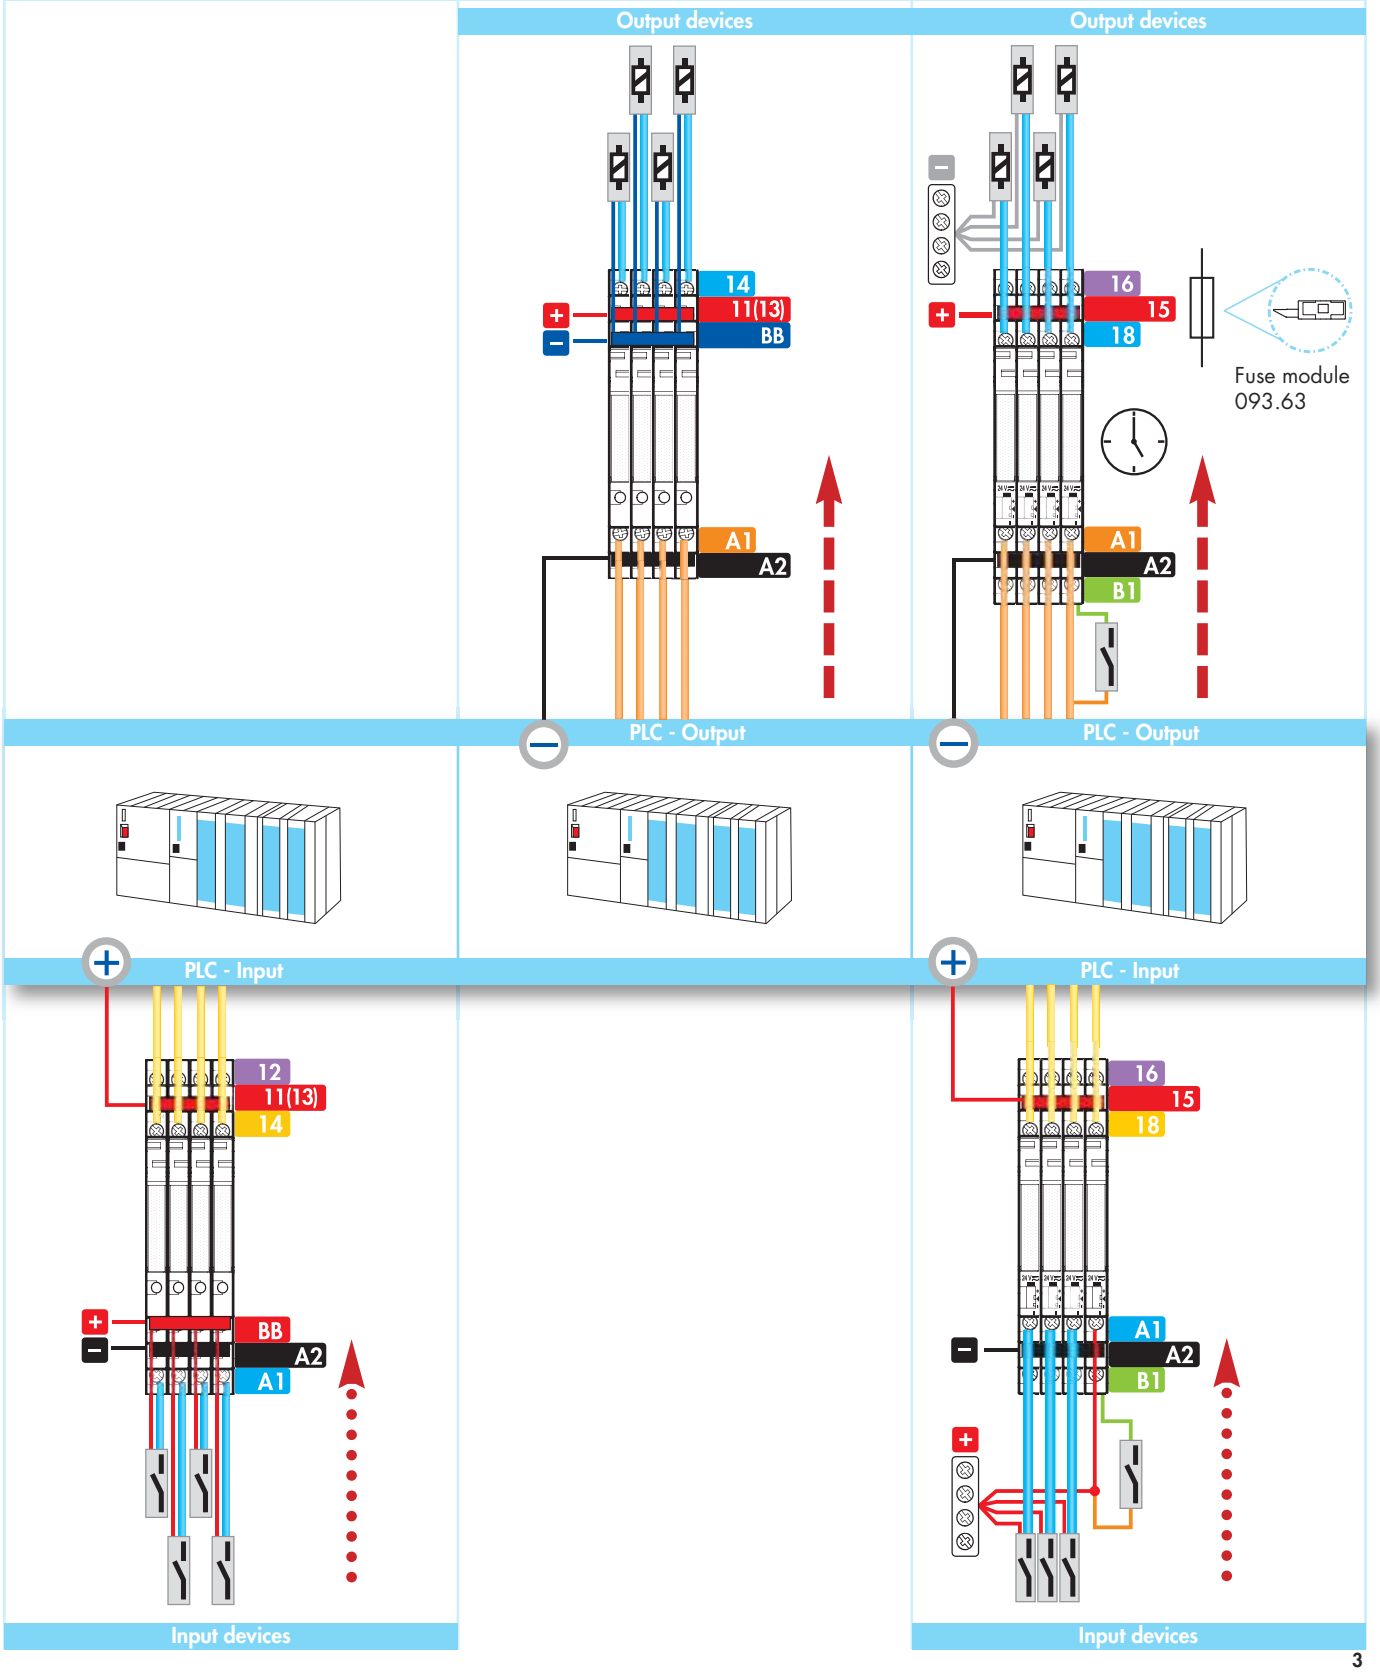
- These models allow the full termination of input device to the interface without the need for additional terminals - saving component cost, time and panel space.
- Quick and easy distribution of supply voltage through the jumper link on the Bus-Bar (BB) connection.
- Ideal for interface applications between the auxiliary contacts, sensors, limit switches and Controllers or PLC's.

*Master**OUTPUT***
39.21 - 39.20

- These models allow the full termination of output device to the interface without the need for additional terminals - saving component cost, time and panel space.
- Quick and easy distribution of supply voltage through the jumper link on the Bus-Bar (BB) connection.
- Ideal for interface applications between the PLC's or Controllers and output devices such as electomagnetic valves or motors etc..

*Master**TIMER***
39.81 - 39.80

- Slim and Multifunction Timed Interface modules.



*Master**BASIC*** - EMR

Features

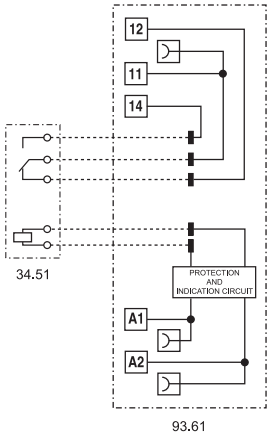
1 Pole interface module, 6.2 mm wide, ideal for PLC and electronic systems

- Common connection possible with optional jumper links (terminals A1, A2 and 11)

NEW **39.11**

- 6 A electromechanical relay
- 6 to 24 V AC/DC and 230 V AC supply
- 35 mm rail (EN 60715) mounting

39.11
Screw terminal



93.61

*Master**INPUT*** - EMR

Features

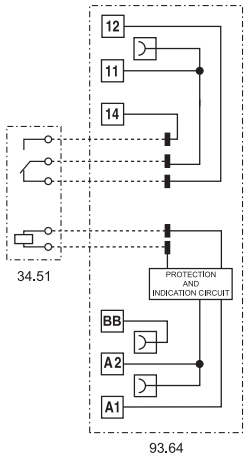
1 Pole interface module, 6.2 mm wide, ideal for PLC and electronic systems

- Jumper link option for the quick and easy distribution of supply voltage to proximity switches and similar input devices (Bus-bar connection BB)
- Gold plated output contact as standard, for better compatibility with low energy PLC inputs

NEW **39.41**

- 6 A electromechanical relay
- 6 - 12 - 24 - 125 V AC/DC and 230 V AC supply
- 35 mm rail (EN 60715) mounting

39.41
Screw terminal



93.64

*Master**TIMER*** - EMR

Features

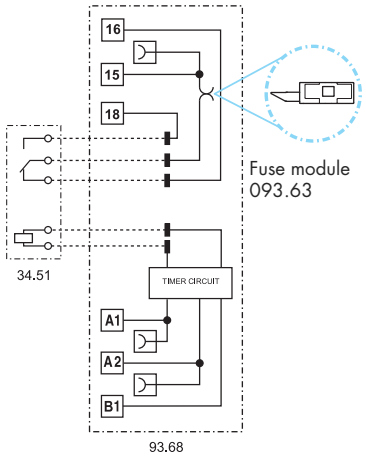
Slim timed interface module, 6.2 mm wide, ideal for space-saving timing solutions in panels

- Timer adjustment via top mounted rotary knob, accessible after assembly
- Control signal terminal
- DIP-switch for selection of 4 time scales and 8 functions
- Accepts output fuse module **093.63** (for 5 x 20 mm fuses) for quick and easy load protection, see page 22
- Common connection possible with optional jumper links (terminals A1, A2 and 15)

NEW **39.81**

- 6 A electromechanical relay
- 12 - 24 V AC/DC supply
- 35 mm rail (EN 60715) mounting

39.81
Screw terminal



AI: On-delay
DI: Interval
GI: Pulse (0.5 s) delayed
SW: Symmetrical flasher (starting pulse on)
BE: Off-delay with control signal
CE: On- and off-delay with control signal
DE: Interval with control signal on
EE: Interval with control signal off

Technical data

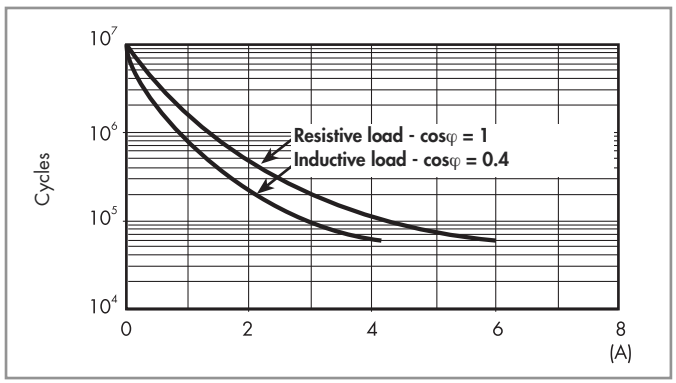
Insulation according to EN 61810-1				
Nominal voltage of supply system		V AC	230/400	
Rated insulation voltage		V AC	250	400
Pollution degree			3	2
Insulation between coil and contact set				
Type of Insulation			Reinforced	
Overvoltage category			III	
Rated impulse voltage		kV (1.2/50) µs	6	
Dielectric strength		V AC	4,000	
Insulation between open contacts (EMR)				
Type of disconnection			Micro-disconnection	
Dielectric strength		V AC/kV (1.2/50) µs	1,000/1.5	

Conducted disturbance immunity		**$U_N \leq 60$ V**	**$U_N = 125$ V**	**$U_N = 230$ V**
Fast transients (burst 5/50 ns, 5 kHz) according to EN 61000-4-4 at supply terminals	kV	4	4	4
Voltage pulses (surge 1.2/50 µs) according to EN 61000-4-5 at supply terminals (differential mode)	kV	0.8	2	4

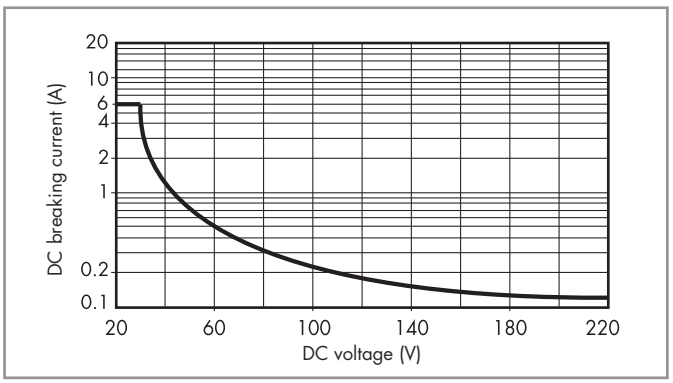
Other data			
Bounce time (EMR) : NO/NC		ms	1/6
Vibration resistance (EMR, 10..55 Hz): NO/NC		g	10/15
Power lost to the environment	without contact current	W	0.2 (24 V) – 0.4 (230 V)
	with rated current	W	0.6 (24 V) – 0.9 (230 V)
Terminals			
Wire strip length		mm	10
Screw torque		Nm	0.5
			Solid and stranded cable
Max. wire size		mm^2	1 x 2.5/2 x 1.5
		AWG	1 x 14/2 x 16
Min. wire size		mm^2	1 x 0.2
		AWG	1 x 24

Contact specification (EMR)

F 39 - Electrical life (AC) v contact current



H 39 - Maximum DC1 breaking capacity



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $60 \cdot 10^3$ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load. Note: the release time for the load will be increased.

Coil specifications - Electromechnical Relay

Coil data sensitive DC, type 39.31

Nominal Voltage	Coil code	Operating range		Must drop-out voltage	Rated input current at U_N	Rated power
U_N		U_{min}	U_{max}	U_r	I_N	at U_N
V		V	V	V	mA	W
125 (110...125)	**7**.125	88	138	12.5	4.6	0.6
220	**7**.220	176	242	22	3.0	0.6

Coil data AC/DC, type 39.11/21/31/41

Nominal Voltage	Coil code	Operating range		Must drop-out voltage	Rated input current at U_N	Rated power
U_N		U_{min}	U_{max}	U_r	I_N	at U_N
V		V	V	V	mA	VA/W

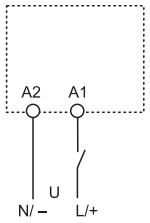
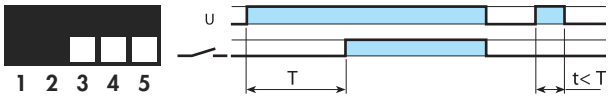
Functions

LED	Supply voltage	NO contact/output
	OFF	Open
	ON	Open
	ON	Open (timing to close in progress)
	ON	Closed

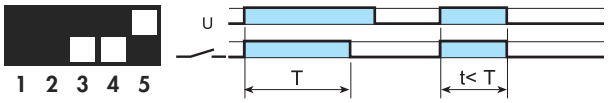
Wiring diagram | **U** = Supply voltage | **S** = Signal switch | = Output contact

Without control signal

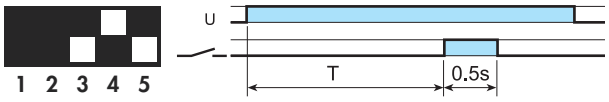




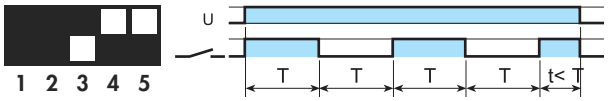
(AI) On-delay
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.



(DI) Interval
Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

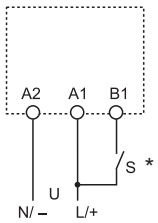


(GI) Pulse (0.5s) delayed
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs after a fixed time of 0.5s.

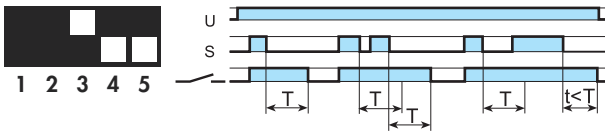


(SW) Symmetrical flasher (starting pulse on)
Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).

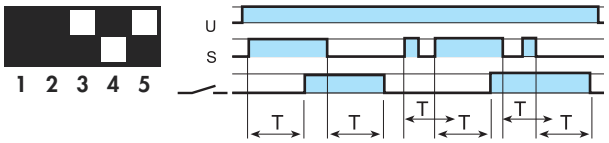
With control signal



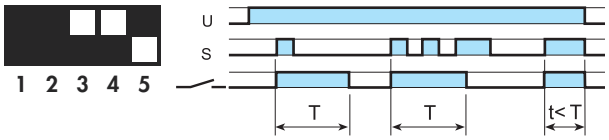
*With DC supply, positive polarity has to be conneted to B1, terminal (according to EN 60204-1).



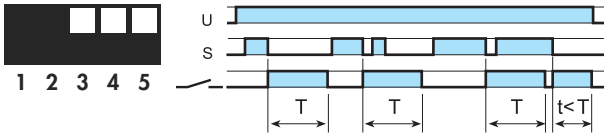
(BE) Off-delay with control signal
Power is permenently applied to the timer. The output contacts transfer immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which time the output contacts reset.



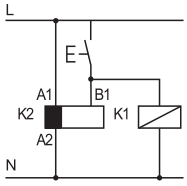
(CE) On- and off-delay with control signal
Power is permenently applied to the timer. Closing the Signal Switch (S) initiates the preset delay, after which time the output contacts transfer. Opening the Signal switch initiates the same preset delay, after which time the output contacts reset.



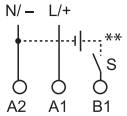
(DE) Interval with control signal on
Power is permenently applied to the timer. On momentary or maintained closure of Signal Switch (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.



(EE) Interval with control signal off
Power is permenently applied to the timer. On opening of the Signal Switch (S) the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.



- Possible to control an external load, such as another relay coil or timer, connected to the control signal terminal B1.



** A voltage other than the supply voltage can be applied to the command Start (B1), example:
A1 - A2 = 24 V AC
B1 - A2 = 12 V DC

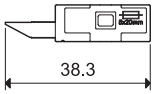
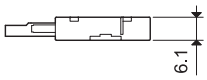
Accessories

093.63

Approvals (according to type):





Output fuse module for 39.31/30/81/80 types | 093.63

- For 5 x 20 mm fuses up to 6 A, 250 V
- Easy visibility of the fuse condition through the window
- Quick connection to socket

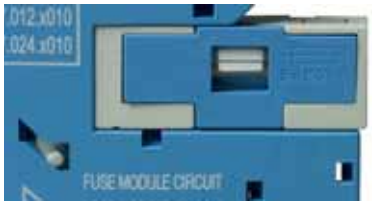
Notes

Safety: Because the output circuit can be reinstated (point 3 below), even with the fuse removed, it is important not to consider the removal of the fuse as a "safety disconnect". Always isolate elsewhere before working on the circuit.
UL: According to UL508A, the fuse module cannot be installed in power circuits (in which it is mandatory that a fuse certified according to UL category JDDZ be fitted). However, where the MasterInterface is connected as an output interface to a PLC no such restrictions apply, and the fuse module can be usefully employed.

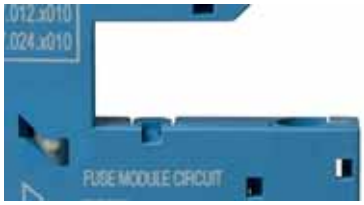
Multi-state fuse module

0. As delivered, the socket comes without a fuse module. However, the absent fuse is internally replaced with an electrical link - which allows the interface relay to be used without a fuse module.
In this state, the peg/indicator is visually hidden and the connection is protected by a special cap.

1. With fuse module inserted after removing the cap, the fuse is positioned electrically in series with the common output terminal of the interface module (11 for EMR versions, 13+ for SSR versions, 15 for EMR timer, 15+ for SSR timer).
This state is indicated by the peg/indicator.



2. If the fuse module is extracted (for example; because the fuse element has blown) the output circuit will be locked open, as this will generally be the "safe option".
This state is indicated by the peg/indicator.



3. In order to reinstate the output circuit it is necessary to either re-insert the fuse module (complete with functional fuse), or alternatively, return the peg/indicator to position **0** by gently applying pressure in the direction of the arrow.

Accessories

093.16

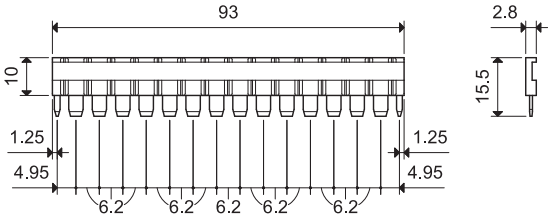
093.16.0

093.16.1

Approvals (according to type):

CE cULus

16-way jumper link	093.16 (blue)	093.16.0 (black)	093.16.1 (red)
Rated values	36 A - 250 V		
Possibility of multiple connection, side by side			

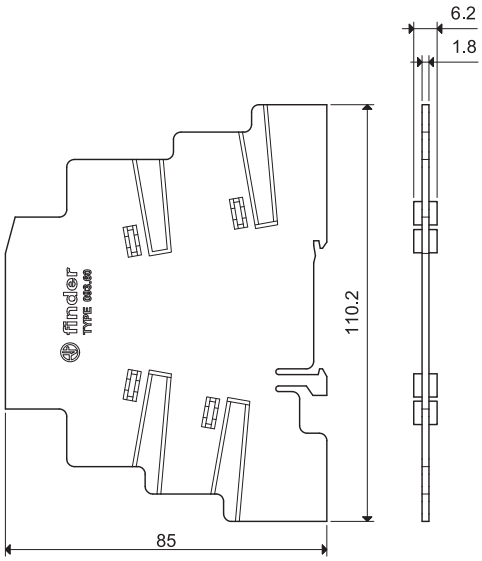


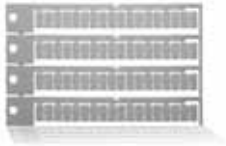
093.60

Dual-purpose plastic separator (1.8 mm or 6.2 mm separation)	093.60

1. By breaking off the protruding ribs (by hand), the separator becomes only 1.8 mm thick; useful for the visual separation of different groups of interfaces, or necessary for the protective separation of different voltages of neighbouring interfaces, or for the protection of cut ends of jumper links.

2. Leaving the ribs in place provides 6.2mm separation. Simply cutting (with scissors) the relevant segment(s) permits the interconnection across the separator of 2 different groups of interface relays, using the standard jumper link.





060.72

Sheet of marker tags, plastic, 72 tags, 6x12 mm	060.72

Accessories

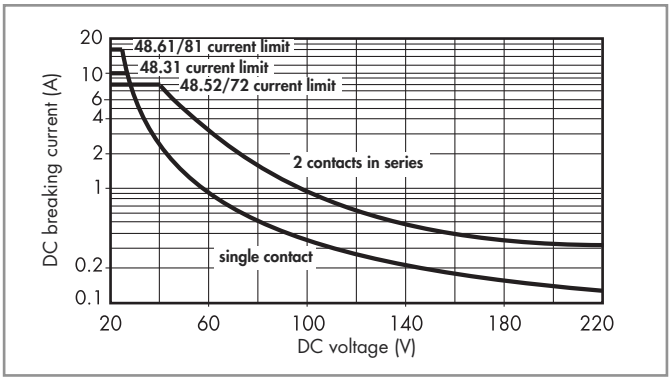
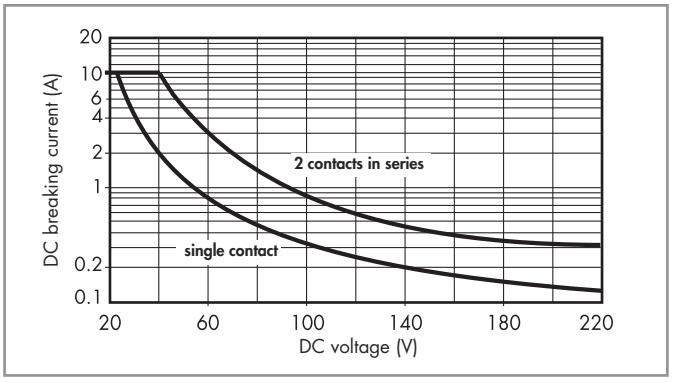
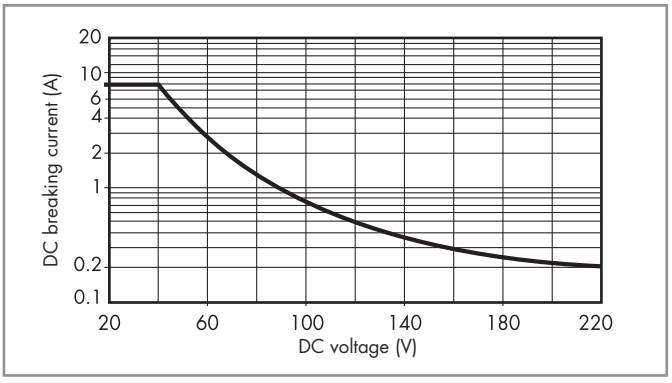
Types 48.31/52/61/72/81



H 48 - Maximum DC1 breaking capacity
Types 48.62/82



H 48 - Maximum DC1 breaking capacity
Type 48.12



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $100 \cdot 10^3$ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load.
  Note: the release time for the load will be increased.

Coil specifications

DC coil data (0.5 W sensitive)

Nominal voltage U_N	Coil code	Operating range U_{min}*	Operating range U_{max}**	Rated coil consumption I at U_N
V		V	V	mA
12	**7**.012	8.8	21	41
24	**7**.024	17.5	42	22.2
125	**7**.125	91	219	4

*U_{min} = 0.8 U_N for 48.61, 48.62, 48.81 and 48.82
**U_{max} = 1.5 U_N for 48.61, 48.62, 48.81 and 48.82

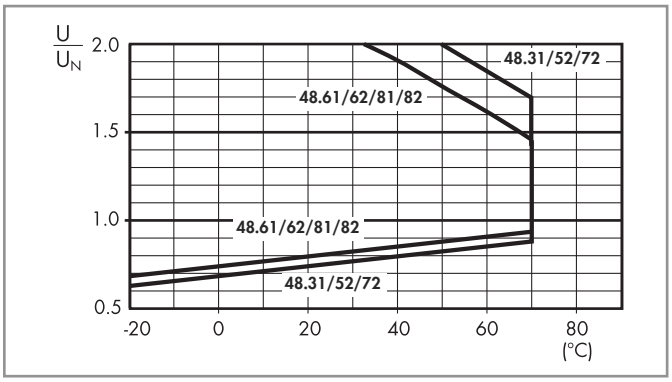
AC coil data

Nominal voltage U_N	Coil code	Operating range U_{min}	Operating range U_{max}	Rated coil consumption I at U_N (50Hz)
V		V	V	mA
12	**8**.012	9.6	13.2	90.5
24	**8**.024	19.2	26.4	46
110	**8**.110	88	121	10.1
120	**8**.120	96	132	11.8
230	**8**.230	184	253	7.0

DC coil data, 2 pole relay - Type 48.12

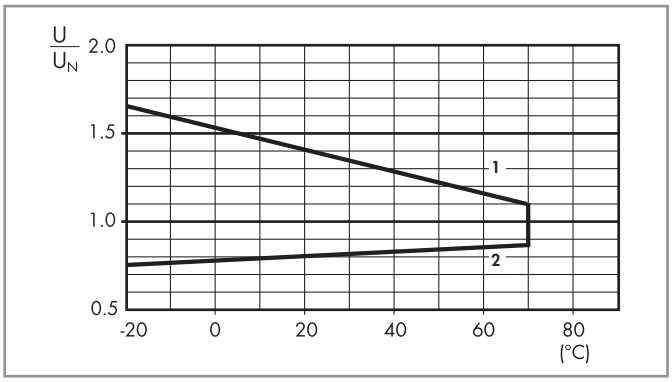
Nominal voltage U_N	Coil code	Operating range U_{min}	Operating range U_{max}	Resistance R	Rated coil consumption I at U_N
V		V	V	Ω	mA
12	**9**.012	9	14.4	205	58.5
24	**9**.024	18	28.8	820	29.3

R 48 - DC coil operating range v ambient temperature



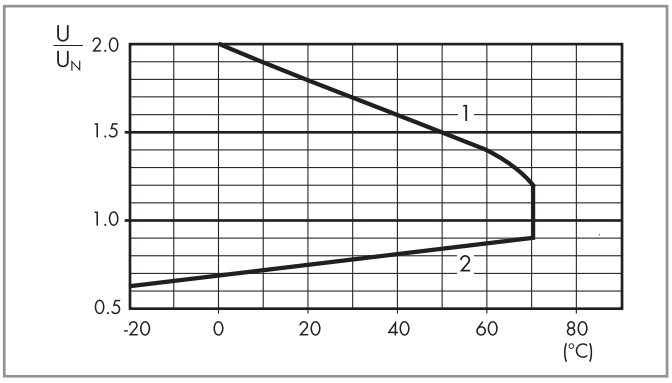
1 - Max. permitted coil voltage.
2 - Min. pick-up voltage with coil at ambient temperature.

R 48 - AC coil operating range v ambient temperature



1 - Max. permitted coil voltage.
2 - Min. pick-up voltage with coil at ambient temperature.

R 48 - DC coil operating range v ambient temperature
Type 48.12



1 - Max. permitted coil voltage.
2 - Min. pick-up voltage with coil at ambient temperature.

Combinations

Code	Type of socket	Type of relay	Module	Retaining clip
48.12	95.05.0	50.12	–	095.71

Features

1 & 2 Pole relay interface modules

5 µm Gold plate contacts for low level switching capability

49.31-50x0 - 1 Pole 10 A (screw terminal)
49.52-50x0 - 2 Pole 8 A (screw terminal)
49.72-50x0 - 2 Pole 8 A (screwless terminal)

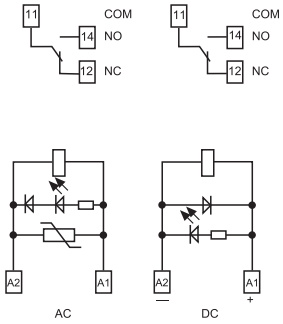
- 15.5 mm wide
- Ideal interface for PLC and electronic systems
- AC coils & DC coils
- Instant ejection of relay using plastic retaining clip
- Supply status indication and coil suppression module
- Identification labels
- 35 mm rail (EN 60715) mounting

49.31-50x0 / 49.52
Screw terminal

49.72-50x0
Screwless terminal

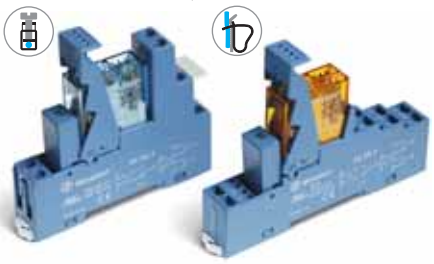
49.31-50x0

- 1 pole, 10 A
- AgNi + Au (5 µm) contact material
- Screw terminal
- 35 mm rail (EN 60715) mounting

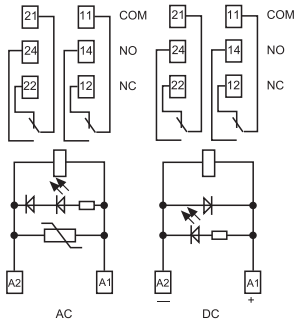


8.xxx0060
7.xxx.0050
9.xxx.0050

49.52/72-50x0



- 2 pole, 8 A
- AgNi + Au (5 µm) contact material
- Screw terminal and screwless terminal
- 35 mm rail (EN 60715) mounting



8.xxx0060
7.xxx.0050
9.xxx.0050

* By external parallel connection of the contacts the values within [1 (0.1/1)] can be acheived.

Contact specification

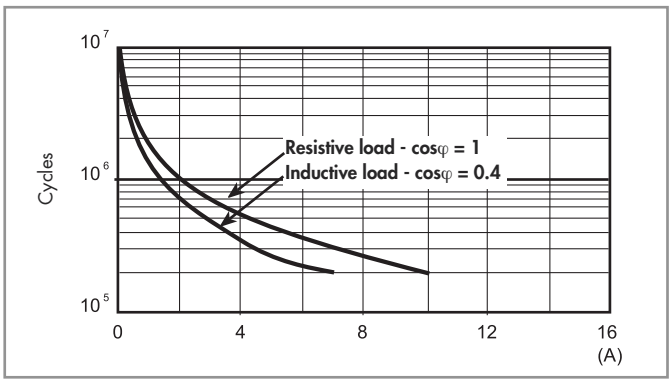
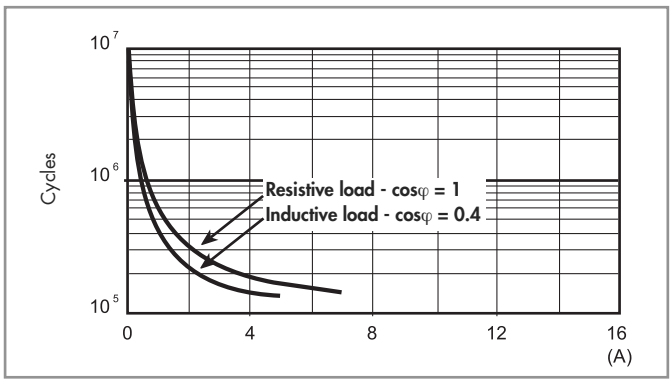
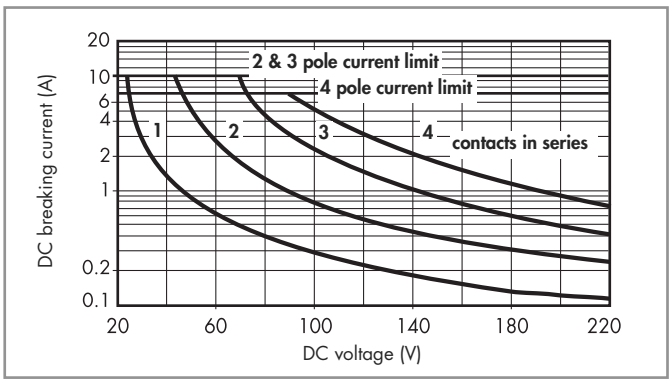
F 58 - Electrical life (AC) v contact current
2 & 3 pole relays



F 58 - Electrical life (AC) v contact current
4 pole relay



H 58 - Maximum DC1 breaking capacity



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $100 \cdot 10^3$ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load.
  Note: the release time for the load will be increased.

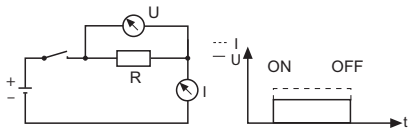
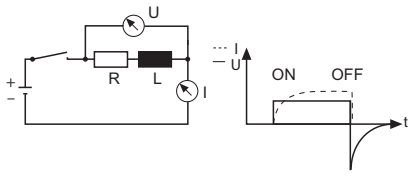
Voltage-current characteristic when switching a resistive load (fig. 1).



Voltage-current characteristic when switching a relay coil (fig. 2).



Switching Relay Coils.

When switching a resistive load, the current follows the phase of the voltage directly (Fig 1).

When switching relay coils the current and voltage waveforms are different due to the inductive nature of the coil (Fig 2). A brief explanation of this mechanism is as follows.

On energisating the coil, the build up of the magnetic field gives rise to counter electromotive forces which in turn delay the rise in coil current. On de-energisation, the sudden interruption of the coil current causes a sudden collapse of the magnetic field, which in turn induces a high voltage of reverse polarity across the coil. This reverse polarity voltage peak can reach a value typically 15 times higher than the supply voltage, and as a consequence can disturb or destroy electronic devices.

To counteract this potentially damaging effect, relays coils can be suppressed with a Diode, a Varistor (voltage dependent resistor) or a RC (resistor/capacitor) module – dependent on the operating voltage. (See below for descriptions of the various Modules available.)

Whilst the above description is based on the working of a DC coil, the reverse polarity voltage peak on de-energisation applies similarly to AC coils. However, when energising AC coils there will also be a coil inrush current of 1.3 to 1.7 times the nominal coil current – dependent on coil size. If coils are fed via a transformer (and particularly if several are energised at the same time) then this may need to taken into account when calculating the VA rating of the transformer.

Diagrams		Functions
99.01.9.xxx.99 only 99.80.9.xxx.99 only	99.02.9.xxx.99 only	**Green LED + diode module (standard polarity)** Recovery diode modules + LED are used for DC only. The reverse voltage peaks of the coil are short circuited by the recovery diode (positive to terminal A1). The release time increases by an approximate factor of 3. If an increase of the release time is undesirable use a Varistor or RC module. The LED indicator lights up when the coil is energized.
99.01.9.xxx.79 only 99.80.9.xxx.79 only	99.02.9.xxx.79 only	**Green LED + diode module (non-standard polarity)** Recovery diode modules + LED are used for DC only. The reverse voltage peaks of the coil are short circuited by the recovery diode (positive to terminal A2). The release time increases by an approximate factor of 3. If an increase of the release time is undesirable use a Varistor or RC module. The LED indicator lights up when the coil is energized.
		Green LED + Varistor module LED modules + Varistor are used for both AC and DC coils. The reverse voltage peaks of the relay coil are limited by the Varistor to approximately 2.5 times the nominal voltage of the supply. When using DC coils it is essential that positive is connected to terminal A1. The relay release time increases insignificantly.
		Green LED module LED modules are used for AC and DC. The LED indicator lights up when the coil is energized. When using DC it is essential that positive is connected to terminal A1.
99.01.3.000.00 only 99.80.3.000.00 only	99.02.3.000.00 only	**Diode module (standard polarity)** Recovery diode modules are used for DC only. The reverse voltage peaks of the coil are short circuited by the recovery diode (positive to terminal A1). The release time increases by an approximate factor of 3. If an increase of the release time is undesirable use a Varistor or RC module.
99.01.2.000.00 only 99.80.2.000.00 only	99.02.2.000.00 only	**Diode module (non-standard polarity)** Recovery diode modules are used for DC only. The reverse voltage peaks of the coil are short circuited by the recovery diode (positive to terminal A2). The release time increases by an approximate factor of 3. If an increase of the release time is undesirable use a Varistor or RC module.
		RC module RC circuit modules are used for AC and DC coils. The reverse voltage peaks of the coil are limited by the RC module to approximately 2.5 times the nominal voltage of the supply. The relay release time increases insignificantly.
		Residual current bypass module Bypass modules are advisable if 110 or 230v AC relays show any tendency to fail to release. Failure to release can be caused by residual currents from AC proximity switches or inductive coupling caused through long parallel lying AC control lines.

Features

Auto/Off/On output module 10 A

- Auto/Off/On output module intended to permit the automatic control of pumps, blowers or motor groups. Or, in the case of installation, maintenance or failure, to permit the load equipment to be turned "Off" or controlled under "On" control
- Ideal interface for PLC and electronic systems
- Only 11.2 mm wide
- 3 function selector switch:
  - Auto: works as a monostable relay (following A3 input)
  - Off: relay permanently OFF
  - On: relay permanently ON
- 24V AC/DC supply and module input
- 35 mm rail (EN 60715) mounting

Application examples:

- control of pumps, blowers or motor groups
- primarily suited to Industrial control systems

	DC	(0.8...1.1) U_N
Technical data		
Ambient temperature range	°C	–20...+50
Protection category		IP 20
Approvals (according to type)		CE EAC

Features

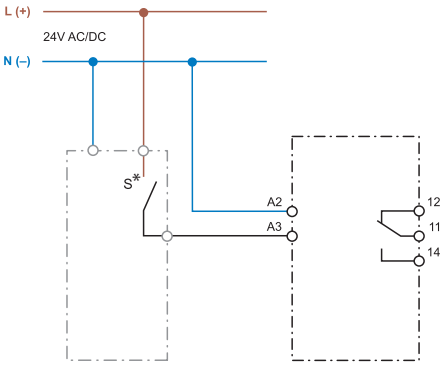
1-channel status indicating module

- 1-channel indicating module to provide visual indication of BMS/DDC/PLC input or output status with immediate indication of its importance or urgency according to the colour of the LED. A change-over output contact, following the input to the module, provides for further control or status feedback. Commonly used in building management systems
- 24V AC/DC input
- 35 mm rail (EN 60715) mounting

Application examples:

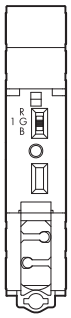
- status reports of heating installations, pumps, blowers or motor groups
- error reports such as danger of frost or blocked filter
- fire alarm

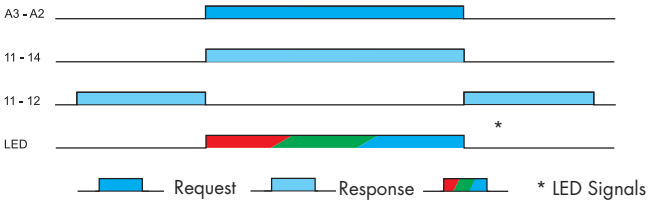
Wiring diagram



19.31.0.024.0000

- LED indicator, 3 colours: Red, Green, Blue
- 1 CO control
- 17.5 mm wide





A3-A2 Status signal of the control penal in the case of faulty operation, normal operation or alarm.
* The LED colour red, green and blue is freely selectable with a switch on the back side for the signal input on A3-A2

The LED colour is selected by the dip-switch on the rear face of the module, prior to mounting on the 35 mm rail.
The colour is determined by the system designer according to the urgency or importance of the signal.
Commonly, the following levels of importance or urgency are assigned to the Red, Green and Blue colours according to EN 60073:
- Red LED: Error
- Green LED: In operation
- Blue LED: Alarm (fire or similar)

For outline drawing see page 11

Contact specification		
Contact configuration		1 CO (SPDT)

Features

2-channel status indicating module

- 2-channel indicating module to provide visual indication of BMS/DDC/PLC input or output status with immediate indication of its importance or urgency according to the colour of the LED. Two NO output contacts, following the inputs to the module, provide for further control or status feedback. Commonly used in building management systems
- 24V AC/DC inputs
- 35 mm rail (EN 60715) mounting

Application examples:

- status reports of heating installations, pumps, blowers or motor groups
- error reports such as danger of frost or blocked filter
- fire alarm

Wiring diagram

Features

Override module - Auto/Off/Hand

- Auto/Off/Hand override module intended to permit the automatic control of pumps, blowers or motor groups. Or, in the case of installation, maintenance or failure, to permit the load equipment to be turned "Off" or controlled under "Hand" control
- 3 function selector switch:
  - Auto: work as a monostable relay relay (following A3 input)
  - Off: relay output permanently Off
  - Hand: relay output permanently On
- 24V AC/DC supply & input
- 35 mm rail (EN 60715) mounting

Application examples:

- control of pumps, blowers or motor groups commonly associated with building management systems

Features

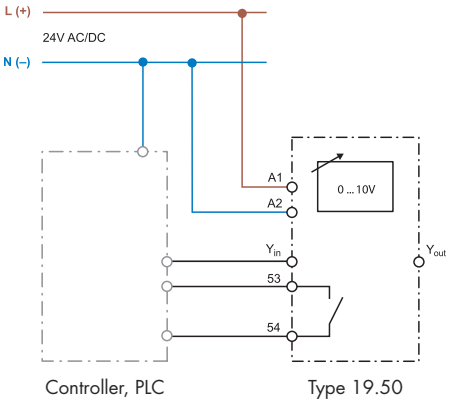
Analogue override module - Auto/Hand (0...10)V

- Analogue output module intended to provide, by the selection switch on the front panel, a (0...10) V output, automatically or by hand. With the selector switch in position "A" (Automatic) the (0...10) V signal is derived from the controller. In position "H" (Hand) the controller signal is ignored and the (0...10) V signal is derived directly from the potentiometer setting on the facia of the module
- The level of the (0...10) V output signal is displayed by 3 green LEDs, set at >25%, >50% and >75%.
- 24V AC/DC supply
- 35 mm rail (EN 60715) mounting

Application examples:

- permits the direct control of proportional valves under exceptional circumstances or where the automatic controller has failed

Wiring diagram



19.50.0.024.0000

- Analogue output (0...10)V, plus 1 feedback output contact

Application notes

Intervention Modules
The demand for security apparatus, heating, air conditioning or efficient energy use in offices, hotels, and private homes or in industrial space is growing constantly, leading to the installation of increasingly complex electronic systems. But what happens if these systems malfunction and a qualified service technician will only be available in a few hours, or even days?

With the use of carefully installed intervention modules, a trained caretaker or security guard can be in a position to recognize interruptions in service, and by manual intervention perform the necessary override actions to maintain system operation until a repair can be effected.

Digital Override control module
Auto-Off-On output module (Type 19.21)
Many processes or systems are automatically controlled by an electronic control system or by a Programmable Logic Controller. In the event of an electronic system malfunction it is important, in order to avoid damage or downtime, to plan for the possibility of controlling the process manually. An Auto-Off-On Module can provide this, located between the output of the electronic system (Controller) and the process to be controlled (End Process) - bypassing the malfunctioning control unit in a planned way. For malfunctioning electronic systems, the process to be controlled can be manually switched On or Off, as needed, using the switch on the front of the unit. Under healthy functioning of the electronic system, the switch is left in the Auto position. In this configuration the process is controlled by the normal functioning of the electronic system and its output. It may be important to know (remotely) if the process is being controlled manually or automatically, in which case the feedback contact on the Auto–Off–On module 19.21 can provide this.

Status indicating module (Type 19.31 and 19.32)
These single and dual channel indicating modules provides an immediate visual indication of the status of a controller input or output, emphasizing its importance or urgency according to the color of the LED. A change-over output contact which follows the input to the module is available if further control or where status feedback is required at another location - such as central control room.
These indicating modules can be used to signal, for example, that a heating unit is in its summer position and not turned on, or that it is heating under correctly functioning control etc. The module's legend plate clearly identifying the condition being monitored and signaled. EN 60073 defines the color RED for danger conditions; GREEN for secure normal operation; and BLUE for a prescribed activity, e.g. fire or other alarm condition. The LED indicator color being pre-selected using the switch on the back of the module.

Override Control Modules (Type 19.41 and 19.42) may be installed if, in the event of a electronic system malfunction, emergency working has to be restored by means of manual intervention. On notice of a malfunctioning system, perhaps through a feedback contact from a Status Indicating Module, the caretaker on-site can then go to control panel housing the appropriate Override module and respond to the malfunction by manipulation of the Auto-Off-Hand switch. The 19.41 module has a three-position switch marked A-O-H. A= Automatic operation, O=OFF and H=Hand (or Manual operation).
Moving away for the Auto position means that the module's output relay is no longer under the control of the defective electronic Control System. Turning the switch to "H" energizes the output relay, whilst selecting the "O" position ensures the relay is de-energized.
For example: a defective heating control system can be manually overridden to be On in the "H" position or Off in the "O" position. In this way heating can be maintained until the faulty controller can be replaced.
The module's green LED will indicate that the Heating is On, whilst the flashing Yellow LED is a reminder that the task is under manual control, and that on the replacement of the defective electronic control system the Auto-Off-Hand switch should be returned to the "A" position.

The 19.42 override module is similar in principle to the 19.41 module except that it is intended for use with two-stage operations as associated with star-delta motor starting, two-speed fan motors, or forward/reverse motor switching. In these applications it is usually necessary to incorporate a "dead" time of > 50ms between the two On states. Consequently, when manually switching with the 19.42, between the "Low" and "High" state and vice versa, a "dead" time of > 80ms is provided for, within the module.

Note of caution: Where the reversal of motor direction is achieved by dual motor windings and a switched capacitor, an interval of approximately 300 ms should be provided. This will need to be provided by the inclusion of a separate timer in the control circuitry. To protect motors with a high moment of inertia (such as large fans and flywheels); when switching from high speed to lower speed, the lower speed should only be switched on when the motor has come nearly to a complete halt.

Analogue Override control module
Analogue output module (0…10)V (Type 19.50)
This module can be installed where there is need to give a manually adjustable analog signal (0…10)V priority over an analog signal from a electronic control unit or PLC, or to override and replace a malfunctioning signal.
The Analogue override module provides, by the selection switch on the front panel, a (0…10)V output signal either generated automatically or by hand. With the selector switch in position "A" (Automatic) the (0…10)V signal at Yout-A2 is derived from the controller signal applied to terminals Yin-A2. In position "H" (Hand) the controller signal is ignored and the (0…10) V signal is derived directly from the potentiometer setting on the module front panel.
Operation in switch position H is indicated by a blinking yellow LED, and by the opening of contact 51-52 – which could be used to report the override condition to the central control room.
The level of the (0…10) V output signal is displayed by 3 green LEDs, set at >25%, >50% and >75%.

Features

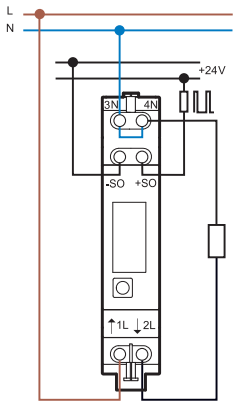
kWh Energy meter
1-phase with multi-functional LC-Display

Type 7E.23 5(32)A - 1 module wide

- Complies with EN 62053-21 and EN 50470
- Display indicates total consumption, partial consumption (this value is resettable), instantaneous: power, voltage and current
- Seven digit counter, LCD with backlight
- Accuracy class: 1/B
- Easy to operate by one control key
- Protection class II
- Pulse output for remote energy management; SO interface (open collector) according DIN 43864 to link the energy meter to a centrally located monitoring/management system
- Tamper-proof cover with lead seal facility available as an accessory
- Space saving small size
- 35 mm rail (EN 60715) mount
- MID compliant version (50 Hz only) available

NEW 7E.23.8.230.00x0

- Nominal current 5 A (32 A Maximum)
- 1-phase 230 V AC
- 17.5 mm wide



For outline drawing see page 8

Specification		
Nominal/Maximum current	A	5/32
Minimum measured current	A	0.02
Current range (within accuracy class)	A	0.25...32
Maximum peak current	A	960 (10 ms)
Supply (& monitored) voltage (U_N)	V AC	230
Operating range		$(0.8...1.15)U_N$
Frequency	Hz	50/60
Power consumption	W	< 0.4
Display (digit height 5 mm)		Seven digit counter, LCD with backlight
Max. totalising count/Min. increment	kWh	999,999.9/0.01 *
LCD-segment pulses per kWh		2,000
Open collector- output specification (SO+/SO–)		
Voltage (external supply)	V DC	5...30
Maximum current	mA	20
Maximum leakage current @30 V/25 °C	µA	10
Pulses per kWh		1,000
Pulse length	ms	30
Internal series resistance	Ω	100
Maximum Cable length @30 V/20 mA	m	1,000

Protective class		II
Protection category: Housing/terminals		IP 50/IP 20
Approvals (according to type)		CE

* 0.01 kWh for readings ≤ 99,999.99 kWh and 0.1 kWh for readings ≥ 100,000.0 kWh

Features

kWh Energy meter
3-phase with multi-functional LC-Display

Type 7E.46-0002 10(65)A - Single and Dual tariff
Type 7E.56-0000 5 (6)A - for current transformer up to 1,500 A

- Complies with EN 62053-21 and EN 50470
- Display indicates total consumption, partial consumption (this value is resettable), instantaneous power per phase or all phases, voltage per phase, current per phase
- ERROR-Display, in case of missing phase or wrong current direction
- Seven digit counter, LCD with backlight
- Accuracy class: 1/B
- Easy to operate by two control keys
- LC-Display can be read twice within a period of 10 days following the loss of supply voltage
- Protection class II
- Pulse output for remote energy management; SO interface (open collector) according DIN 43864 to link the energy meter to a centrally located monitoring/management system
- Tamper-proof cover with lead seal facility available as an accessory
- 35 mm rail (EN 60715) mount
- MID compliant version (50 Hz only) available

* Current transformer ratios: 5:5, 50:5, 100:5, 150:5, 200:5, 250:5, 300:5, 400:5, 500:5, 600:5, 750:5, 1,000:5, 1,250:5, 1,500:5.

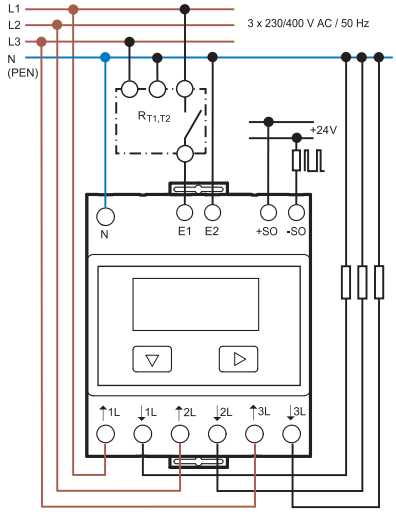
** 0.01 kWh for readings ≤ 99,999.99 kWh and 0.1 kWh for readings ≥ 100,000.0 kWh

*** 0.1 kWh for readings ≤ 999,999.9 kWh and 1 kWh for readings ≥ 1,000,000 kWh

For outline drawing see page 8

NEW 7E.46.8.400.00x2

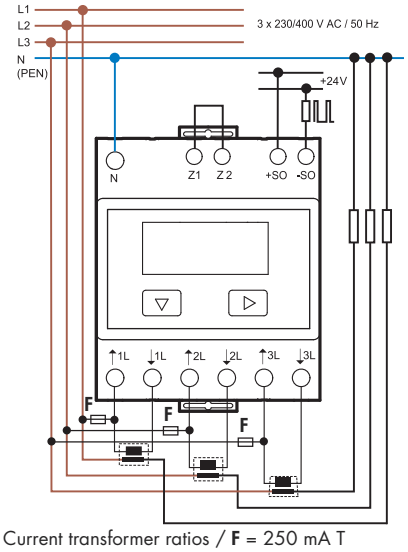
- Nominal current 10 A (65 A Maximum)
- 3-phase
- Single and Dual tariff (Day and Night)
- 70 mm wide



$R_{T1,T2}$ = Tariff switching equipment

NEW 7E.56.8.400.00x0

- Nominal current 5 A (6 A Maximum)
- 3-phase
- Usable with current transformer up to 1,500 A
- 14 selectable Current Transformer ratios
- 70 mm wide



* Current transformer ratios / **F** = 250 mA T

Specification			
Nominal/Maximum current	A	10/65	5/6
Minimum measured current	A	0.04	0.01
Current range (within accuracy class)	A	0.5...65	0.05...6
Maximum peak current	A	1,950 (10 ms)	180 (10 ms)
Supply (& monitored) voltage (U_N)	V AC	3 x 230	3 x 230
Operating range		(0.8...1.15)U_N	(0.8...1.15)U_N
Frequency	Hz	50/60	50/60
Power consumption per phase	W	< 1.5	< 1.5
Display (digit height 6 mm)		Seven digit counter, LCD with backlight	
Max. totalising count/Min. increment	kWh	999,999.9/0.01 **	9,999,999/0.1 ***
LCD-segment pulses per kWh		100	10
Open collector- output specification (SO+/SO–)			
Voltage (external supply)	V DC	5...30	5...30
Maximum current	mA	20	20
Maximum leakage current @30 V/25 °C	µA	10	10
Pulses per kWh		1,000	10
Pulse length	ms	30	30
Internal series resistance	Ω	100	100
Maximum Cable length @30 V/20 mA	m	1,000	1,000
Technical data			
Accuracy class		1 / B	1 / B
Ambient temperature	°C	–10...+55 °C	–10...+55 °C
Protective class		II	II
Protection category: Housing/terminals		IP 50/IP 20	IP 50/IP 20
Approvals (according to type)		CE	

Features

kWh Energy meter
1-phase with mechanical display

Type 7E.12 10(25)A - 2 module wide
Type 7E.13 5(32)A - 1 module wide
Type 7E.16 10(65)A - 2 module wide

- Complies with EN 62053-21 and prEN 50470
- Certified by PTB (Physikalisch - Technischen Bundesanstalt)
- Accuracy class 1 / B
- Protection class II
- Pulse output for remote energy management; SO interface (open collector) according DIN 43864 to link the energy meter to a centrally located monitoring/management system
- Tamper-proof cover with lead seal facility available as an accessory
- Space saving small size
- 35 mm rail (EN 60715) mount
- MID compliant version (50 Hz only) available

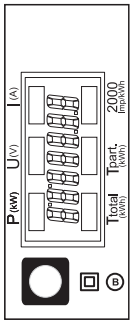
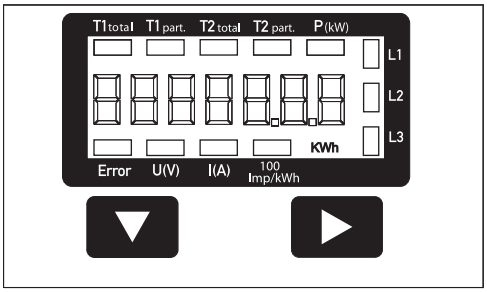
LC-Display Type 7E.23, 7E.46, 7E.56

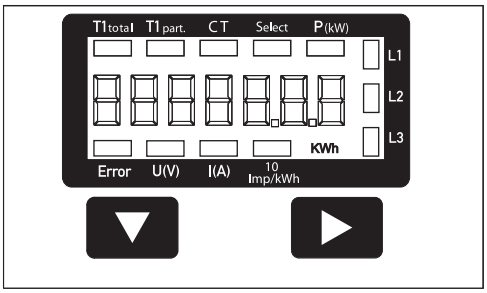
Indication elements



Type 7E.23		
Ttotal	kWh	Indicates total consumption
Tpart.	kWh	Indicates partial consumption, this value is resettable
P	kW	Indicates the instantaneous power
U	V	Indicates the voltage
I	A	Indicates the current
2,000 Imp/kWh		Pulsed according to drawn power Error indication (line 1L/2L inverted) with pulsating 600/600 ms



Type 7E.46		
T1 total	kWh	Indicates total consumption Tariff 1
T1 part.	kWh	Indicates partial consumption for Tariff 1, this value is resettable
T2 total	kWh	Indicates total consumption Tariff 2
T2 part.	kWh	Indicates partial consumption for Tariff 2, this value is resettable
P	kW	Indicates the instantaneous power per phase or all phases
U	V	Indicates the voltage per phase
I	A	Indicates the current per phase
100 Imp/kWh		Pulsed according to drawn power
kWh		Indicates the unit kWh when the consumption is displayed
L1/L2/L3		For P-, U-, I- or Error display, the corresponding phase is displayed
Error		Indicates a missing phase or incorrect current direction - the appropriate phase is also displayed



Type 7E.56		
T1 total	kWh	Indicates total consumption
T1 part.	kWh	Indicates partial consumption, this value is resettable
CT		Indicates the set current transformer ratio, factory setting is 5:5
Select		The transformer ratio can be selected in the menu item Select *
P	kW	Indicates the instantaneous power per phase or all phases
U	V	Indicates the voltage per phase
I	A	Indicates the current per phase
10 Imp/kWh		Pulsed according to drawn power
kWh		Indicates the unit kWh when the consumption is displayed
L1/L2/L3		For P-, U-, I- or Error display, the corresponding phase is displayed
Error		Indicates a missing phase or incorrect current direction - the appropriate phase is also displayed

* To adjust the current transformer ratio remove the bridge Z1 - Z2 and reset the energy meter according to the operation instructions. Then lock it again with the bridge. For a tamper proof lead seal use 4 terminal covers (07E.16).

Mechanical Display Type 7E.12, 7E.13, 7E.16, 7E.36

LED indication (Normal operation)

Type	Energy consumption			Pulses per kWh	Pulse space	The LED Pulse rate represents the instantaneous power being consumed, according to the following
	None	Low	High			
7E.12 7E.13				2,000	100 ms	kW = (number of pulse per Minute) / 33.3
7E.16				1,000	100 ms	kW = (number of pulse per Minute) / 16.7
7E.36				100	150 ms	kW = (number of pulse per Minute) / 1.7

LED indication (Abnormal operation)

Status indicates errors of installation, as below

Type 7E.12, 7E.13, 7E.16

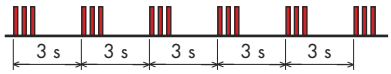
Device ON, incorrect connection (L-N inverted).
Mark = 600 ms, Space = 600 ms

Type 7E.36

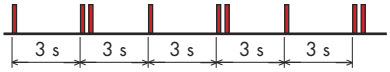
Mark = 100 ms,
Phase L1↑ L1↓ inverted or loss

Phase L2↑ L2↓ inverted or loss

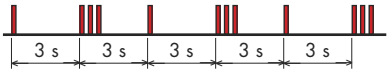
Phase L3↑ L3↓ inverted or loss



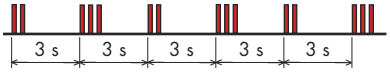
Phase L1↑ L1↓ and L2↑ L2↓ inverted or loss



Phase L1↑ L1↓ and L3↑ L3↓ inverted or loss



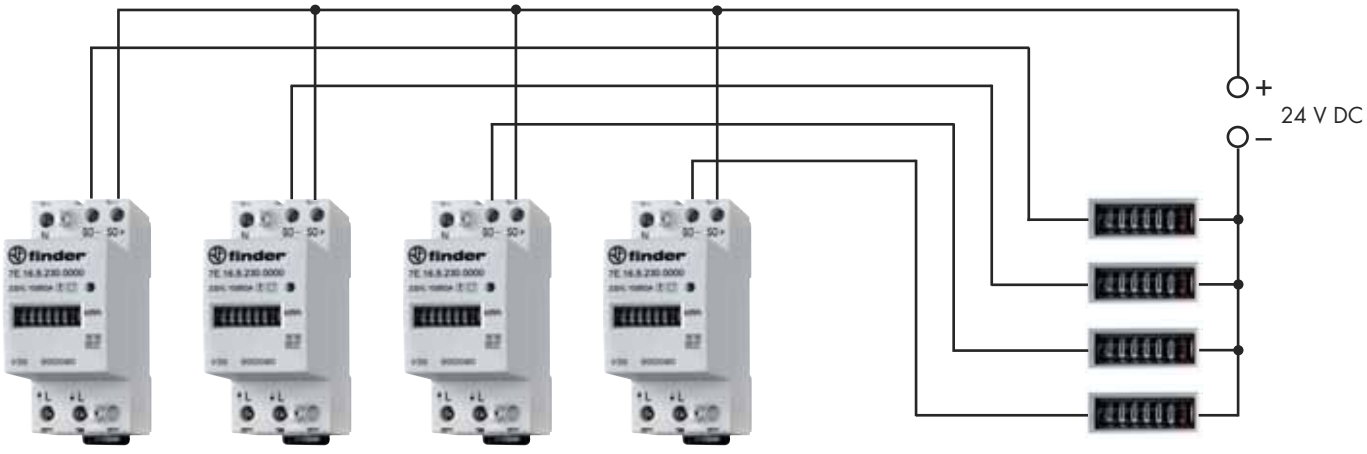
Phase L2↑L2↓ and L3↑L3↓ inverted or loss



Phase L1↑ L1↓ and L2↑L2↓ and L3↑L3↓ inverted or loss

SO+/SO– Open collector output wiring diagram Type 7E.12, 7E.13, 7E.23, 7E.16, 7E.36, 7E.46, 7E.56

The pulsating open collector output available at terminals SO+ and SO– can be interfaced with the input of a computer, plc or other energy management equipment to allow the remote monitoring of energy consumed.

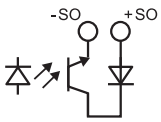


Energy meters – at difference locations
(Note: Both Single and Dual tariff meters provide only a single pulsating output)

Central monitoring/management system
(max. 20 mA for each input)

SO-Output Type 7E.12, 7E.13, 7E.16, 7E.23

SO+/SO– Open collector output



SO-Output Type 7E.36, 7E.46, 7E.56

SO+/SO– Open collector output

Accessories

07E.13

Terminal cover for type 7E.13, 7E.23	07E.13

For the tamper-proof lead seal use 2 terminal covers

07E.16

Terminal cover for type 7E.12, 7E.16, 7E.36, 7E.46 and 7E.56	07E.16

7E.12, 7E.16 - For the tamper-proof lead seal use 2 terminal covers

7E.36, 7E.46, 7E.56 - For the tamper-proof lead seal use 4 terminal covers

Features

SPD Type 1+2 Surge arrester range - single phase system / three phase system

- Surge arresters suitable in low-voltage applications in order to protect equipment against overvoltage by direct lightning strike, induction overvoltage and switching overvoltage.
- To be installed at the boundary of LPZ 0_A - LPZ 1 zones or higher
- Versions with combination of varistor and encapsulated spark gap which eliminates leakage current and ensures high discharge current
- Remote status signalling contact for each varistor module. Connector 07P.01 included
- Visual fault signalling
- According to EN 61 643-11
- 35 mm rail EN 60715 mounting, 35mm each pole

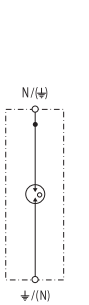
7P.09.1.255.0100 SPD Type 1, GDT protection for N-PE application only
7P.01.8.260.1025 SPD Type 1+2, varistor unipolar protection suitable to realize single phase or three phase systems (230/400 V) with the GDT protection (7P.09)
7P.02.8.260.1025 SPD Type 1+2 for single phase system. Varistor protection L-N + spark gap protection N-PE

7P.09 / 7P.01 / 7P.02
Screw terminal

For outline drawing see page 10

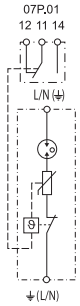
NEW 7P.09.1.255.0100

- SPD Type 1
- Spark gap module for N-PE application



NEW 7P.01.8.260.1025

- SPD Type 1+2
- Combination of varistor and encapsulated spark gap
- Visual fault signalling varistor status



NEW 7P.02.8.260.1025

- SPD Type 1+2
- Combination of varistor and encapsulated spark gap + spark gap
- Visual fault signalling for each varistor module

Features

SPD Type 1 Surge arrester range with "Low U_p-System" – Single phase / three phase system

- Surge arrester suitable for 230/400 V system/ applications to prevent overvoltage effects caused by direct or indirect lightning strikes.
- To be installed at the boundary of LPZ 0_A and LPZ 1 zones
- "Low U_p System" guarantees low U_p values as if it has a built-in SPD Type 2
- Visual indication of varistor status - Healthy/Replace
- Remote signalling contact, of varistor status. Connector 07P.01 included
- Replaceable varistor and Spark Gap modules
- Complies with EN 61 643-11
- 17.5 mm rail EN 60715 mounting for each module

7P.12.8.275.1012
- Varistor protection L-N + spark gap protection N-PE
- Replaceable Spark Gap and varistor modules

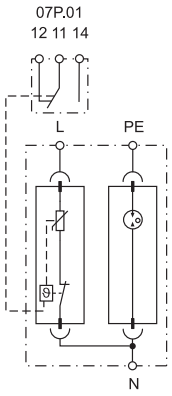
7P.13.8.275.1012
- Varistor protection L1, L2, L3-PEN
- Replaceable varistor modules

7P.21 / 7P.22
Screw terminal

For outline drawing see page 11

NEW 7P.12.8.275.1012

- SPD Type 1
- Replaceable Spark Gap and varistor modules
- Visual and remote signalling of varistor status



NEW 7P.13.8.275.1012

- SPD Type 1
- Replaceable varistor modules
- Visual and remote signalling of varistor status

Features

SPD Type 2 Surge arrester range - single phase systems

- Surge arrester suitable for 230V system/ applications
- Protects equipment against overvoltage caused by lightning strikes or switching transients
- To be installed at the boundary of LPZ 1-LPZ 2 zones or higher

7P.21.8.275.1020 Varistor protection L - N
7P.22.8.275.1020 Varistor protection L - N + spark-gap protection N - PE

Spark-gap protection N - PE avoids earth leakage current

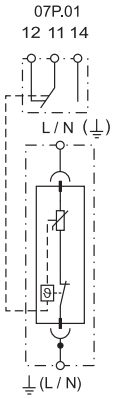
- Visual indication of varistor status - Healthy/Replace
- Remote signalling contact of varistor status Connector (07P.01) included
- Recommended fuse rating: 125 A
- Replaceable modules
- Complies with EN 61643-11
- 35 mm rail (EN 60715) mounting

7P.21 / 7P.22
Screw terminal

For outline drawing see page 12

7P.21.8.275.1020

- SPD Type 2 (1 varistor)
- Replaceable varistor module
- Visual and remote signalling of varistor status



7P.22.8.275.1020

- SPD Type 2 (1 varistor + 1 spark-gap)
- Combination of replaceable varistor and encapsulated spark gap modules
- Visual and remote signalling of varistor status

Features

SPD Type 2 Surge arrester range for Photovoltaic applications

- Surge arrester for protection on DC side (420 to 1,000 V) of systems in photovoltaic applications
- Protects equipment against overvoltage caused by lightning strikes or switching transients
- To be installed at the boundary of the LPZ 0 - LPZ 1 zones, or higher

7P.26.9.420.1020 420 V DC
7P.23.9.700.1020 700 V DC
7P.23.9.000.1020 1000 V DC

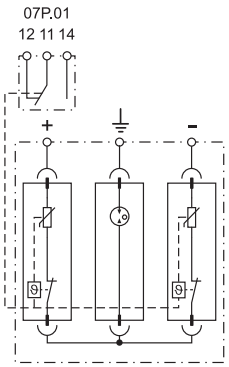
- Visual indication of varistor status - Healthy/Replace
- Remote signalling contact of varistor status Connector (07P.01) included
- Replaceable modules
- Complies with EN 61643-11
- 35 mm rail (EN 60715) mounting

7P.23.9 / 7P.26
Screw terminal

For outline drawing see page 12

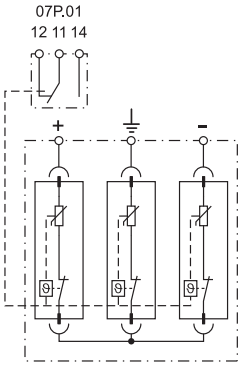
7P.26.9.420.1020

- SPD Type 2 (2 varistors + 1 spark-gap) for 420 V DC photovoltaic systems
- Combination of replaceable varistor and encapsulated spark gap modules
- Visual and remote signalling of varistor status



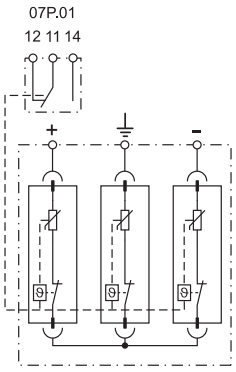
7P.23.9.700.1020

- SPD Type 2 (3 varistors) for 700 V DC photovoltaic systems
- Replaceable varistor modules
- Visual and remote signalling of varistor status



7P.23.9.000.1020

- SPD Type 2 (3 varistors) for 1000 V DC photovoltaic systems
- Replaceable varistor modules
- Visual and remote signalling of varistor status



SPD specification		Varistor module	Spark-gap module	Varistor module	Varistor module
PV voltage mid central earthing ($U_{OC\ STC}$)	V DC	600		700	1,000

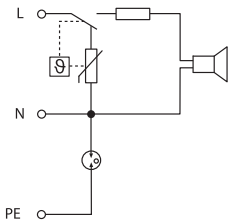
Features

SPD Type 3 Surge arrester for incorporation within socket outlets

- Provides easy additional surge protection for existing 230 V sockets
- Protects electric and electronic equipment against pulse overvoltage
- Combined varistor + spark-gap protection (avoiding earth leakage current)
- Acoustical indication of varistor status (Replace)
- Complies with EN 61 643-11
- 3 wires, 150 mm long, for connection to socket terminals

7P.32.8.275.2003

- SPD Type 3
- Acoustical (buzzing) signalling of varistor fault



For outline drawing see page 12

SPD specification		
Nominal voltage (U_N)	V AC	230
Maximum continuous operating voltage (U_C)	V AC	275
Nominal discharge current (8/20 µs) L-N, L(N)-PE (I_n)	kA	3 / 3
Test voltage of the combined generator L-N, L(N)-PE (U_{OC})	kV	6 / 6
Voltage protection level L-N, L(N)-PE (U_P)	kV	1 / 1.5
Response time L-N, L(N)-PE (t_a)	ns	25 / 100
Short-circuit proof at maximum overcurrent protection	kA_{rms}	6
Maximum overcurrent protection		16A gL/gG or C16 A
Transient OverVoltage 5s L-N (U_{TOV})	V	335
Transient OverVoltage 5s L-PE (U_{TOV})	V	400
Transient OverVoltage 200 ms L-PE (U_{TOV})	V	1,430
Other technical data		
Ambient temperature range	°C	–25...+40
Protection degree		IP 20
Wire length	mm	150
Approvals (according to type)		CE EAC

Ordering information

Example: 7P series, surge protection device, Type 2, single phase (Uc = 275 V), 1 varistor + 1 encapsulated spark gap, with remote status signalling contact, In = 20 kA

7	P	.	2	2	.	8	.	2	7	5	.	1	0	2	0

Series

Type
0 = Combined type 1 + 2 arresters
1 = Type 1 surge arresters
2 = Type 2 surge arresters
3 = Type 3 surge arresters

Circuit
1 = Single phase (1 varistor)
2 = Single phase (1 varistor + 1 spark-gap)
3 = Three-phase (3 varistors)
4 = Three-phase (3 varistors + 1 spark-gap)
5 = Three-phase (4 varistors)
6 = 2 varistor + 1 spark-gap
9 = N-PE spark-gap
0 = Spare module

Supply version
1 = N+PE connection
(only for single spark gap replaceable module and 7P.09)
8 = AC (50/60 Hz)
9 = DC (PV application)

Supply voltage
000 = 1.000 V DC Max (or N+PE connection for spark gap modules)
700 = 700 V DC Max
420 = 420 V DC Max
275 = 275 V Max for SPD Type 1 "Low Up", Type 2 (U_c) (for U_N = 230-240 V AC) and Type 3
260 = 260 V Max (U_c) for SPD Type 1+ 2 (for U_N = 230-240 V AC)
255 = 255 V Max (U_c) for SPD Type 1, N+PE (7P.09)

Nominal discharge current
100 = 100 kA (I_{imp} Type 1) only for 7P.09
012 = 12.5 kA (I_{imp} Type 1)
020 = 20 kA (I_n Type 2)
025 = 25 kA (I_{imp} Type 1+2)
003 = 3 kA (In @ U_{oc} only for 7P.32)

Remote status signalling contact
0 = Without remote status signalling contact
1 = Built-in remote status signalling contact
2 = Acoustic fault signalling

Replaceable modules

Replacement varistor and Spark-Gap modules		7P.10.8.275.0012	7P.10.1.000.0025
		Varistor	Spark-Gap

SURGE VOLTAGE PROTECTORS

Surge voltage protectors (such as Finder's Surge Protection Devices, SPD) are intended to be installed in electrical systems, to protect people and machines from surge voltages that can occur on the electrical supply line and which would otherwise have disastrous consequences. These surge voltages can be atmospheric (lightning) or can originate on the electrical system due to, for example: the opening and closing of large loads, short circuits, or the switching of large power factor correction capacitors. The SPD can be described as a switch that is in parallel with the electrical system's supply line - which it is protecting. At the nominal network voltage (e.g. 230 V) the SPD appears as an open switch, having a very high impedance (almost infinite). But, under an overvoltage condition its impedance rapidly falls to near 0 Ω. This effectively applies a short circuit across the supply lines and immediately "drains" the overvoltage to earth. In this way the supply line is protected wherever SPD are installed. When the overvoltage has passed, the SPD impedance rises rapidly and resumes the state of an open switch again.

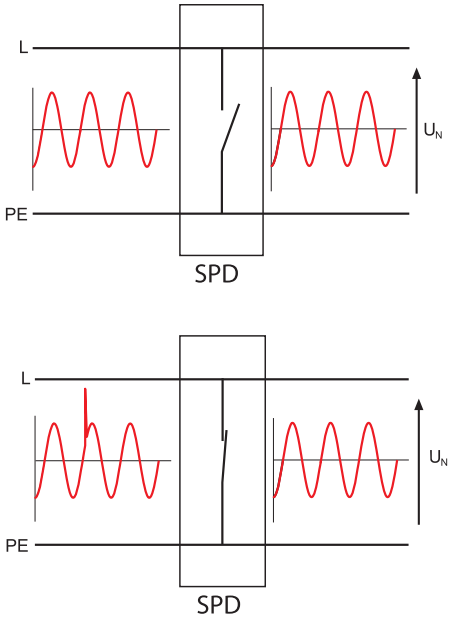

Figure 1: Ideal operation of an SPD

SPD technologies

Finder surge voltage protectors use either varistors or spark gaps.

Varistor: this can be considered as a variable resistance that at nominal voltage has a very high ohmic value. But the resistance rapidly falls to near zero as the voltage surges. In this way the varistor applies a near short circuit which clamps the surge voltage. The varistor is however subject to progressive degradation due to the small leakage current that occurs at the nominal voltage, and with the number of interventions. With every overvoltage that occurs the leakage current rises and accelerates the end of life for the device - which is ultimately indicated by the change from green to red in the signal-window.

Spark gap: this comprises two electrodes separated by air, or a gas. When a surge voltage occurs an electrical arc bridges the gap and a surge current flows to limit the surge voltage to a low and constant level. The arc extinguishes only when the surge current falls below about 10 ampere. The gas guarantees a constant level of breakdown voltage since the arc is struck in a protected environment; not exposed to pressure or humidity variations or impurities as would happen if it had occurred in air. There is however, a delay before the device arcs and the surge current is diverted, and this is dependent on the magnitude of the original voltage surge and on its rate of rise. Therefore, the voltage protection level can vary, although it is guaranteed to be less than U_p.

Component	Symbol	Leakage current	Energy dissipated	Response time	Voltage/Current characteristic
Ideal		0	High	Fast	
Spark gap		0	High	Medium	
Varistor		Very Low	Medium	Fast	

Figure 2: SPD component characteristics.

Installation (Overvoltage) categories

Choosing the SPD requires the matching the Rated Impulse Voltage of the SPD with that of the equipment to be protected. This in turn relates to the Installation category (Overvoltage category). Installation categories are described within IEC 60664-1, which for a 230/400 V installation prescribes as follows:

- **Installation category I:** 1.5 kV for "particularly sensitive" equipment (e.g. electronic devices like PC or TV set);
- **Installation category II:** 2.5 kV for "user" equipment subject to "normal" impulse voltages (e.g. household electrical appliances, mobile items);
- **Installation category III:** 4 kV for equipment that are part of a fixed installation (e.g. switchboards, switches)
- **Installation category IV:** 6 kV for equipment installed at or near the origin of main incoming supply mains (e.g. energy meters).

Lightning Protection Zones and installation considerations

International standards refer to the various Lightning Protection Zones by the letters LPZ followed by an appropriate number.

LPZ 0A: An external area, where a direct lightning strike is possible and where there is total exposure to the electromagnetic field induced by the lightning.

LPZ 0B: An external area, but below a lightning conductor providing direct lightening strike protection. There remains total exposure to the electromagnetic field.

LPZ 1: Area within a building – therefore protected from direct lightning strike. The electromagnetic field will be attenuated, depending on the degree of shielding. This zone has to be protected by SPD type 1 device(s) at its boundary with the LPZ 0A or 0B zone.

LPZ 2: An area, typically a room, where the lightning current has been limited by preceding surge protectors. This zone has to be protected by SPD type 2 device(s) at its boundary with the LPZ 1 zone.

LPZ 3: An area within a room where the lightning current has been limited by preceding surge protectors (typically the wiring after a socket or an area within a metal enclosure). This zone has to be protected by SPD type 3 device(s) at its boundary with the LPZ 2 zone.

On the following picture (Figure 3, representation is not binding) is shown that the transition from a protection zone to the next is through the installtion of SPD. SPD Type 1 must be connected upstream the system, at the point of delivery connection. As alternative is possible to use SPD Type 1+2. The grounding conductor must have a minimum section of 6 mm² for SPD Type 1, of 4 mm² for SPD Type 2, and 1.5 mm² for SPD Type 3 (If the building has an LPS, reference should be made to CEI 81-10/4 for the correct dimension of the cable).

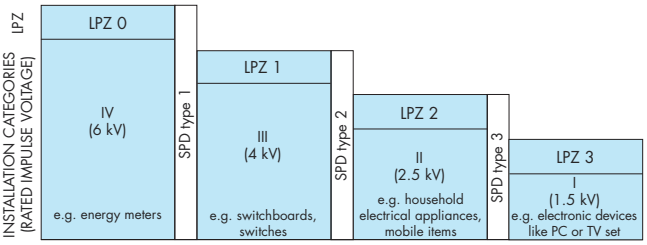

Figure 3: Typical relationship between Lightning Protection Zones, Installation Categories and SPD types

Rated values and marking common to all SPD

[U_c] Maximum continuous operating voltage: Under this voltage the SPD is guaranteed to appear as an "open switch". This voltage is normally at least equal to the nominal supply voltage (U_N) + 10%. For the Finder SPD, U_c is specified as 275 V.

[U_p] Voltage protection level: This is the highest voltage level seen across the SPD during its intervention. For example, for Finder SPD Type 2, this means that a 4kV overvoltage would be limited by the SPD to a maximum 1.2 kV. Consequently, electronic devices such as PC, TV, stereo, etc. are protected - as their own internal protection will handle overvoltages up to 1.5 kV.
To better understand this concept; imagine that the SPD is a switch in series a low resistance. In the case of an overvoltage the switch closes and all the current goes through the resistance. According to Ohm's law the voltage developed across the resistance will be this resistance x the current (V = R x I), and will be limited to < U_p.

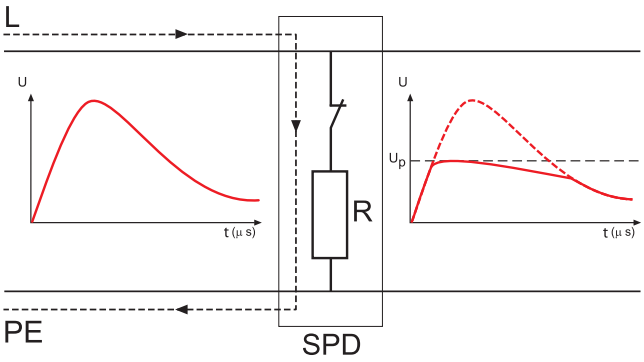

Figure 4: Overvoltage limiting

Short circuit proof: A further characteristic, not normally marked on the product but important for its correct installation, is the Short circuit proof at maximum overcurrent protection. This is the maximum short-circuit current that the SPD is able to withstand when it is installed with additional maximum overcurrent protection - such as a fuse rated in accordance with the value stated under the SPD specification. Consequentely the maximum prospective short-circuit current of the system at the point of installation of the SPD must not exceed this value.

Rated vaules and marking of SPD Type 1

SPD Type 1 must be connected upstream the system, at the point of delivery of power energy. SPD protects building and people from the risk of direct lightning (fire and death) and are characterized by:

[I_{imp}10/350] Impulse current: I_{imp} corresponds to the peak value of a 10/350 µs current impulse waveform. This waveform represents a direct lightning strike and is used in tests to prove the performance of SPD type 1 devices.

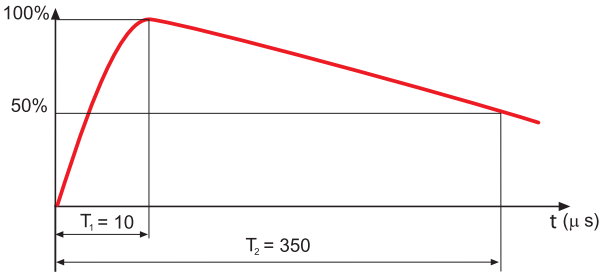

Figure 5: 10/350 µs current waveform

Comparison of the waveforms in figures 5 and 6 shows the much higher energy content controlled by the type 1 SPD.

[I_n8/20] Nominal discharge current: The peak current (and waveform shape) through the SPD under conditions prescribed by EN 62305 to represent the surge current as a consequence of a lightning strike to the electric supply line.

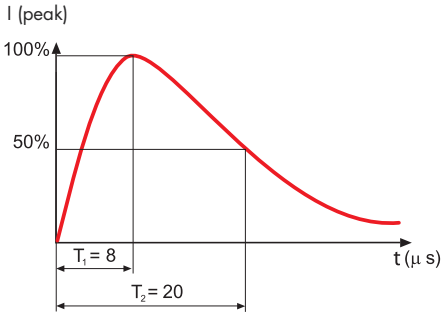

Figure 6: 8/20 µs current waveform

Rated values and marking of SPD Type 2

SPD Type 2 devices are designed to remove all the overvoltage from supply circuits that are not likely to be directly hit by lightning. SPD Type 2 are connected downstream SPD Type 1 or SPD Type 1+2, (minimum distance 1 m) and they protect machine and tools connected to the grind and reduce the risk of economic loss.
SPD Type 2 are characterized by:

[I_n8/20] Nominal discharge current: The peak current (and waveform shape) through the SPD under conditions prescribed by EN 62305 to represent the surge current as a consequence of a lightning strike to the electric supply line.

[I_{max}8/20] Maximum discharge current: Peak value of the highest current of a 8/20µs waveform that an SPD can discharge at least once without breaking.

Rated values and marking of SPD Type 3

SPD type 3 devices are used to protect the end user from overvoltage. They may be installed in supply networks where SDP types 1 and/or 2 already exist. They can be installed in fixed or mobile sockets and have the following characteristic parameters.

U_{oc}: test voltage. This is the peak value of the no load voltage of the combined test-generator; this has a waveform of 1.2/50 µs (figure 7) and can supply at the same time current with waveform 8/20 µs (figure 6).

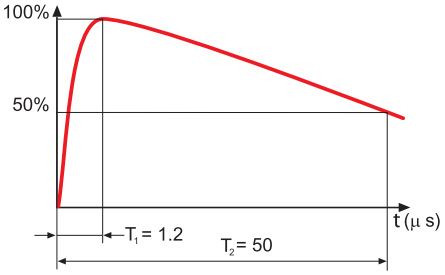

Figure 7: 1.2/50 µs voltage waveform

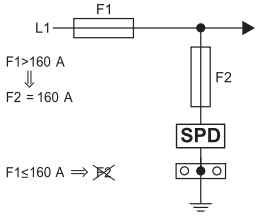
Suggestion for the connection

The correct connection of SPD requires a shortest as possible connection to the equipotential local bar, to which are connected PE cables of the equipment to be protected. From the equipotential local bar there is a connection to the EBB. The phase wiring remains appropriate to the load.



Protection against SPD's short circuits is provided by the overcurrent protective devices (fuses type gL/gG) recomended.

If the overcurrent protective devices F1 (which are part of the installation) have a rating smaller than or equal to the maximum recommended rating for the overcurrent protective devices F2 (back up fuse), then F2 can be omitted.

If F1 > 160 A, then F2 = 160 A (F2min = 125 A only for SPD Type 2)

If F1 ≤ 160 A, then F2 can be omitted

The use of 125 A fuse gL/gG, instead of fuse rated 160 A gL/gG, as short circuit overcurrent protection is permitted and does not compromise the efficiency and the safety function of the SPD.

Coordination of SPD

Optimal protection from surges requires cascaded coordinated SPDs. Coordination has the purpose of splitting the energy associated with voltage across the SPDs and it is achieved by introducing an impedance between the SPDs, or alternatively, by connecting them using wires having the minimum length indicated in the figures below, in order to use the impedance of its own conductor.

PROTECTING PHOTOVOLTAIC (PV) SYSTEMS AGAINST LIGHTNING

Photovoltaic systems are generally located external to a building and can be subjected to the direct or indirect effects of lightning. Whilst the installation of photovoltaic panels on the roof does not, in itself, increase the risk of direct lightning, the only practical way to protect against the effects of a direct lightning strike would be the use of a lightning protection system (LPS).
The indirect effects of lightning can however, be mitigated by the appropriate use of Surge Protection Devices (SPD). These indirect effects occur when lightning strikes in proximity to the structure and where magnetic induction creates an overvoltage in the conductors – a danger to both people and equipment. In particular, the DC cables of a PV system would be exposed to the high conducted and radiated disturbances caused as a result of the lightning currents. In addition, overvoltages in PV systems are not only of atmospheric origin. It is also necessary to consider overvoltages due to switching on electrical networks connected to them. These overvoltages can also damage both the inverter and the PV panels, and this explains the need to protect the inverter on both DC and AC sides.

Installation characteristics

[$U_{OC\ STC}$] PV voltage: corresponds to the SPD maximum operating voltage and must be greater or equal to the maximum no-load voltage of the PV system - depending on the configuration: earth free or mid central earthing.

It is suggested that the maximum no-load voltage of the PV system is calculated on the basis 1.2 x N x $U_{OC(module)}$, where $U_{OC(module)}$ is the no-load voltage of the single PV module in standard conditions and N is the number of modules connected in series in each array of the PV system (TS 50539-12).

Earth free system

An earth free system installation, typical of smaller systems, is characterized by the DC side floating, without connection to the ground. $U_{OC\ STC}$ refers to the voltage between positive and negative poles. Class II photovoltaic panels are normally used in earth free system. However, if Class I panels are used, their metallic frames have to be earthed for safety reasons.

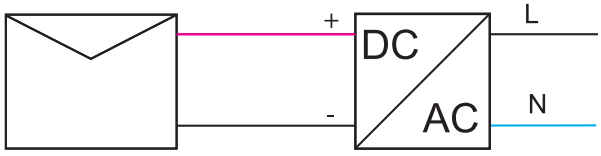

Figure 8: Earth free system installation

Mid central earthing

This system is used in larger installations, with high voltages: the ground connection to the mid point reduces by half the maximum voltage with respect to the ground. In this case $U_{OC\ STC}$ is the voltage between the pole connected to the SPD and the ground.

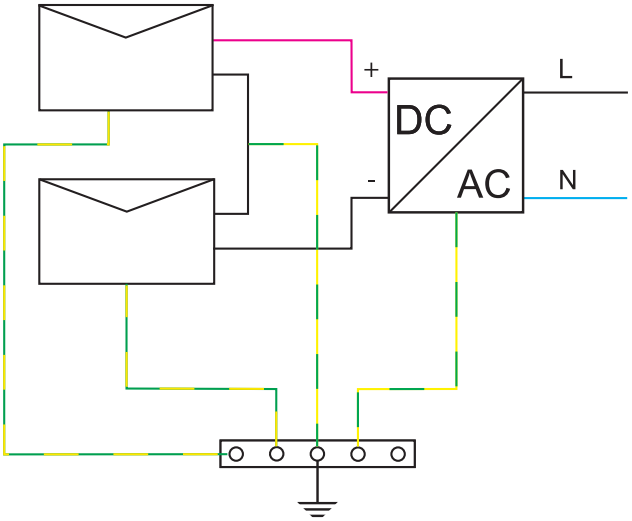

Figure 9: Mid central earthing installation

Photovoltaic system on a building without a lightning protection system (LPS)

As an example, Figure 10 represents a simplified photovoltaic system placed on a building without lightning rod. In such a system, the protection against lightning must be considered at the following points of installation:

- DC input of the inverter
- AC output of the inverter
- Low voltage supply network

At the DC input to the inverter SPDs specific for photovoltaic systems must be installed, according to the PV system voltage. At the inverter AC output, type 2 surge arresters must be installed suitable for the type of system. At the point of connection to the LV supply network, install type 2 surge arresters suitable to the type of system (TT, TN). In more complex systems, it might be necessary to introduce additional SPDs. For example; if the PV panels are more that 10m from the inverter: fit one set of SPD as close as possible to the panels and one close to the inverter. At the point to delivery of energy, must be connected an SPD Type 1 or combined (1+2).

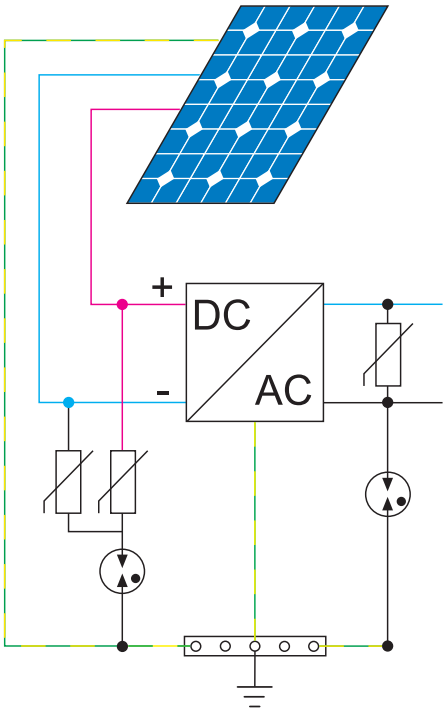

Figure 10: example of a photovoltaic system located on a building without LPS, protected on the DC side by an SPD with $U_{OC\ STC}$ = 420 V, and on the AC side by a 7P.22, specific for TT systems.

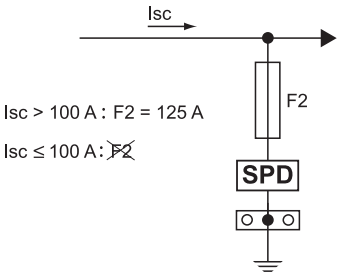
Photovoltaic system on a building with a lightning protection system (LPS)

Where an LPS exists it is good practice to install the photovoltaic panels in the area protected by the lightning rod.
In addition it is necessary to realize a good equipotential bonding system, which must be positioned as close as possible to the entry point of LV supply into the structure. The LPS, the SPD and all metal parts have to be connected to this equipotential system.
SPD protection on the DC side is the same as for systems without LPS, consequently an arrester for PV systems of a suitable voltage ($U_{OC\ STC}$) should be used.
An appropriate Type 2 SPD should protect the AC side of the inverter, assuming a Type 1 SPD is already installed upstream.
However, if the inverter is sited in the field, for example; below the structure that supports the panels, then we recommend installing a Type 1 SPD to the AC side, instead of Type 2. Note that under EN 62305 installation of a Type 1 SPD is mandatory at the point of delivery of electricity, if the building has LPS (with or without solar panels).

SPD fuse protection

The Finder SPD can break a 100 A DC (@200 V DC) current. This means that for short circuit current of string (Isc) lower than 100 A, it is not necessary to install a back up fuse.



Features

Relay module with forcibly guided contacts

7S.12 with 2 pole (1NO + 1 NC)
7S.14 with 4 pole (2 NO + 2 NC and 3 NO + 1 NC)
7S.16 with 6 pole (4 NO + 2 NC)

- For safety applications, with class A forcibly guided contact relays (EN 50205)
- For functional reliability in machinery and plant engineering according to EN 13849-1
- For railway applications; materials compliant with fire and smoke characteristics (UNI 11170-3); mechanical and climatic characteristics compliant with EN 61373 and EN 50155
- Extended operating range (0.7....1.25) U_N
- Coil status visual indication with LED
- 35 mm rail (EN 60715) mount

	DC	—	—
Technical data			
Electrical life at rated load AC1	cycles	$100 \cdot 10^3$	$100 \cdot 10^3$
Detection levels		Fixed (0.75...1.2)U_N	Adjustable (±5...±20)% U_N
Switch-on lock-out time/reaction time		(5 or 10)min / < 0.5 s	(5 or 10)min / < 0.5 s
Fault memory		—	—
Electrical isolation: Supply to Measuring circuits		None – circuits are electrically common	None – circuits are electrically common
Ambient temperature range	°C	–20...+55	–20...+55
Protection category		IP 20	IP 20
Approvals (according to type)		CE	

Features

3 - Phase 400 V
Over & Under voltage monitoring relay

71.31.8.400.1010
- Adjustable Over & Under voltage detection
- Switch selectable 5 or 10 minute lock-out delay

- 35 mm rail (EN 60715) mounting
- LED indication
- Positive safety logic (healthy conditions - output relay energised)

71.31.8.400.1010

- Adjustable - symmetrical Over/Under voltage limits adjustable between ±5% to ±20% U_N
- Switch selectable - 5 min or 10 min delay

- Delects and trips on out-of-limits L-L voltage, and protects against excessive "starts/hour" through "power-on" and "lock-out" time delays.
- Typical applications - protection of compressor motors and high pressure discharge lamp circuitry.

Features

3 - Phase 400 V - Line monitoring relays

71.31.8.400.1021
- **Over & Under voltage trip on-delay**
- **Fault memory**

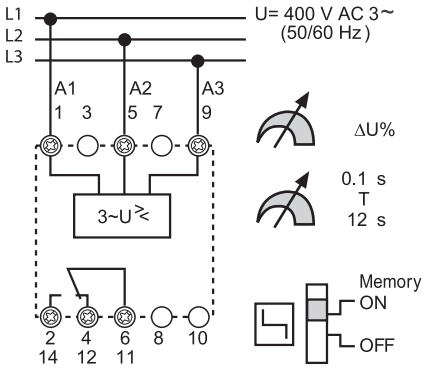
71.31.8.400.2000
- **Phase asymmetry**
- **Phase rotation**
- **Phase loss**

- 35 mm rail (EN 60715) mounting
- LED indication
- Positive safety logic (healthy conditions - output relay energised)

71.31.8.400.1021

- 3 phase 400 V - line voltage monitoring
- Detects over and under voltage
- Adjustable trip on-delay
- Switch selectable fault memory

- Under voltage trip level (0.8...0.95)U_N - Adjustable
- Over voltage trip level 1.15 U_N - Fixed
- Trip delay time (0.1...12)s adjustable
- Fault memory, switch selectable
- Fault acknowledgement by switch manipulation from ON to OFF and back to ON or power down



71.31.8.400.2000

- 3 phase asymmetry monitoring
- Phase rotation monitoring
- Phase loss monitoring

- Asymmetry between phases (–5... –20)% U_N adjustable
- Detection of the supply voltage U to A1 (1) and/or A2 (5) > 1.11 U_N

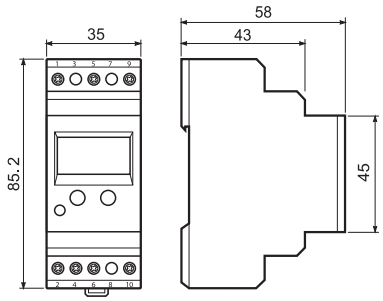
Features

Universal voltage or current detecting and monitoring relay

71.41.8.230.1021 - Voltage monitoring

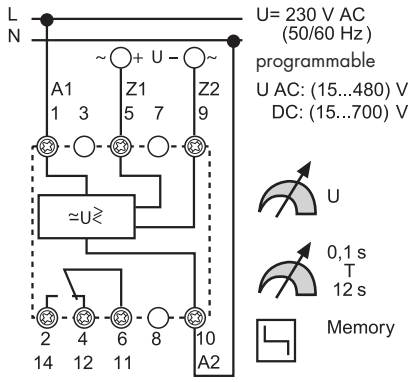
71.51.8.230.1021 - Current monitoring

- Zero voltage memory according to EN 60204-7-5
- Programmable for DC or AC detection level:
  - range detecting: upper and lower value
  - upper set point minus hysteresis range (5...50)% for switch on
  - lower set point plus hysteresis range (5...50)% for switch on
- Fault memory
- Electrical isolation between measuring and supply circuits
- Immune to supply interruptions of < 200 ms
- Wide detecting range:
  - voltage: DC (15...700)V, AC (15...480)V
- 35 mm rail (EN 60715) mounting



71.41.8.230.1021

- Programmable universal voltage monitoring relay
- AC/DC voltage detection - adjustable
- AC (50/60 Hz) (15...480)V
- DC (15...700)V
- Switch-on hysteresis (5...50)%
- Switch-off delay (0.1...12)s



71.51.8.230.1021

- Programmable universal current monitoring relay
- Usable with current transformer 50/5, 100/5, 150/5, 250/5, 300/5, 400/5 or 600/5
- AC/DC current detection - adjustable
- AC(50/60Hz) (0.1...10)A with current transformer to 600A
- DC (0.1...10)A
- Switch-on hysteresis (5...50)%
- Switch-off delay (0.1...12)s
- Start delay (0.1...20)s

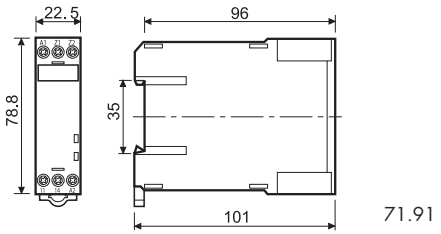
Features

Thermistor temperature sensing relays for industrial applications

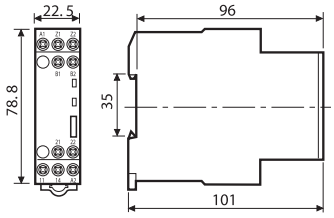
71.91 - 1 Pole, without fault memory

71.92 - 2 Pole, with fault memory

- Overload protection according EN 60204-7-3
- Positive safety logic - make contact opens if the measured value is outside of the acceptable range
- Industry standard module
- LED status indication
- 35 mm rail (EN 60715) mounting



71.91

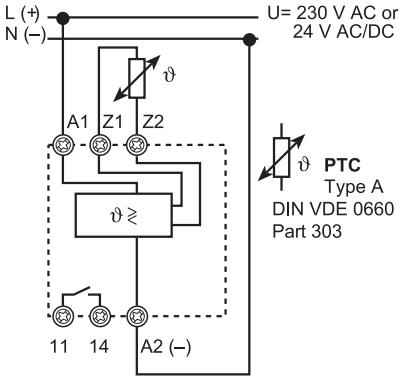


71.92

71.91.x.xxx.0300

- Thermistor relay
- 1 Pole normally open contact
- 24 V AC/DC, or 230 V AC supply

- Temperature detection with PTC
- PTC short circuit detection
- PTC wire breakage detection



71.92.x.xxx.0001

- Thermistor relay with fault memory
- 2 Pole changeover contacts
- 24 V AC/DC, or 230 V AC supply

- Temperature detection with PTC
- Fault memory – switch selectable
- Reset by Reset button or supply interruption
- PTC short circuit detection
- PTC wire breakage detection

Ordering information

Example: Universal voltage monitoring relay with LCD display for AC/DC voltage detection, 1 CO (SPDT) contact rated 10 A 250, supply voltage 230 V, programmable delay time and fault memory.

7 1 . 4 1 . 8 . 2 3 0 . 1 0 2 1

Series

Type
1 = 1 phase AC line monitoring
3 = 3 phase AC line monitoring
4 = AC/DC universal- Voltage detection
5 = AC/DC universal- Current detection
9 = Thermistor relay (temperature monitoring with PTC thermistor)

No. of poles
1 = 1 CO (SPDT) types 71.11, 31, 41, 51
1 = 1 NO (SPST-NO) type 71.91
2 = 2 CO (DPDT) type 71.92

Supply version
0 = AC(50/60Hz)/DC
8 = AC (50/60 Hz)

Supply voltage
024 = 24 V AC/DC
230 = 230 V
400 = 400 V

Additional functions
0 = Basic function
1 = Adjustable detection value
2 = Adjustable: Asymmetry, phase loss, phase rotation

Special versions
0 = No fault memory
1 = Fault memory

Options
0 = No delay time
1 = Two selectable delay times
2 = Adjustable delay times

Contact circuit
0 = CO (nPDT)
3 = NO (nPST-NO)

Explanation of relay marking and LED/LCD display

Monitoring relay without LCD-display	
ON	LED green steady light: supply voltage is on and measuring system is active.
DEF	Default: the detected value is outside of the acceptable range (asymmetric is shown by the LED ASY). LED red flashing: delay time is running, see the function diagram. LED red steady light: output relay is off, contact 11-14 (6-2) is open.
ASY	Phase asymmtery is outside of the predefined range. LED steady light: output relay is turned off, contact 11-14 (6-2) is open.
LEVEL	Selected range as % value.
TIME	Delay time min (minutes) or s (seconds).
MEMORY ON	Fault memory switched on: the state of the output relay after the accurrence of a fault –contact 11-14 (6-2) open– will be maintained, monitored value returns to within acceptable limits. Fault reset is made by switch manipulation from ON to OFF to ON, or by power down (71.31.8.400.1021 & 71.92.x.xxx.0001), or by operating of the "RESET" (71.92.x.xxx.0001).
MEMORY OFF	Fault memory turned off: the sate of the output contatcts will only remain in the "fault" condition –contact 11-41 (6-2) open– while the monitored value is outside of the acceptable limits. When the monitored value returns within the acceptable limits the contact will revert to the energised state. Monitored equipment will start again automatically.

Monitoring relay with LCD-display			
SET/RESET	Relay 71.41 and 71.51. Sets and resets the programmable values - see operating in the packing.		
SELECT	Relay 71.41 and 71.51. Selects the desired parameter for programming - see operating instructions.		
DEF	Default, LED red steady or flashing.		
PROG Modus	Enter the programming mode by simultaneously pressing the buttons "SET/RESET" and "SELECT" for 3 seconds. The word "prog" is shown for 1 second. "SELECT" allows the choise of "AC" or "DC", and is confirmed with "SET/RESET". Successively pressing the button "SELECT" brings up the choises of Up, or Up_{Lo}. The appropriate choise is made by pressing the "SET/RESET" button. The next step will program the appropriate values and the selection of the fault memory function (which is selected with a "YES" or "NO"). If all programming steps are completed the display will read "end".		
Short programmin instruction	After repeatedly pressing the "SET/RESET" button the measured value will be displayed, or "0" appears if nothing is connected to Z1 and Z2 (5 and 9). If the programming is brocken off before "end" is shown in the display the previous program will remain unchanged after an interruption of the supply voltage.		
Program query	Pushing the "SELECT" button for at least 1 second, enters the "program inquiry mode". The programmed mode and the values are shown on the repeated pressing of the "SELECT" button.		
Flashing M (memory)	Fault memory has had effect (fault acknowledgement and reset is made by a 1 second press of the "SET/RESET" button).		
LCD-display	V = volt A = amp Up = upper limit (with hysteresis in down direction) Lo = lower limit (with hysteresis in up direction) Up_{Lo} = upper and lower limit - range detecting	Level= value Hys = hysteresis M = memory (fault) Yes = yes - with memory no = no - without memory	t_1 = T_1 - time during which short-time fulctuations are not taken into account t_2 = T_2 - (monitoring relay 71.51) the time during which inrush currents are not taken into a account

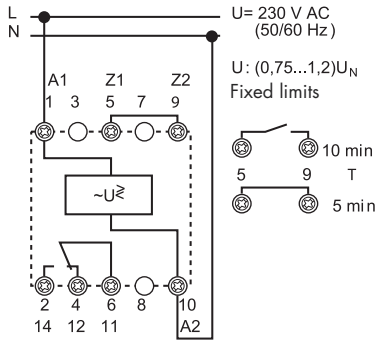
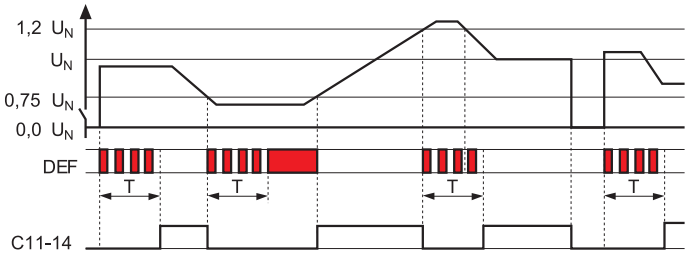
71.91.x.xxx.0300		Normal operation Set point is OK 11-14 is closed	Temperature to high or PTC line break or PTC short circuit 11-14 is open **Will close, if set point is OK**		
71.92.x.xxx.0001 **Memory OFF**		Normal operation Set point is OK 11-14 is closed	Temperature to high or PTC line break or PTC short circuit 11-14 is open **Will close, if set point is OK**		
71.92.x.xxx.0001 **Memory ON** ON OFF ON OFF		Normal operation Set point is OK 11-14 is closed	Temperature to high or PTC line break or PTC short circuit 11-14 is open		Temperature is OK 11-14 is open **Will close at RESET**

Functions

Type 71.11.8.230.0010



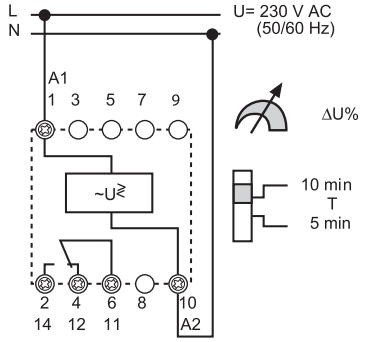


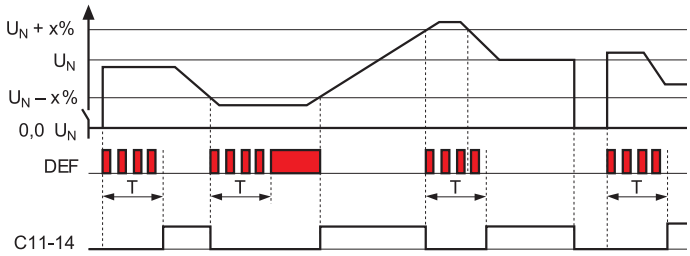
Switch off
Immediately if monitored value is outside of the set points.

Switch on
After expiry of the time T and if monitored value is within the set points.

C = output contact
Normally open 11-14 (6-2) closed.

Type 71.11.8.230.1010



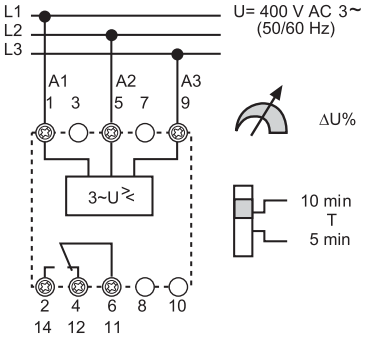


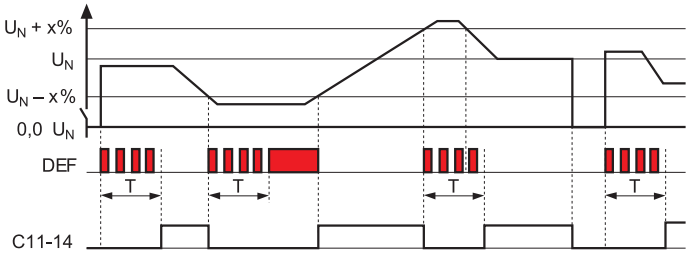
Switch OFF
Immediately if monitored value is outside of the set points.

Switch on
After expiry of the time T and if monitored value is within the set points.

C = output contact
Normally open 11-14 (6-2) closed, all values within the set points.

Type 71.31.8.400.1010



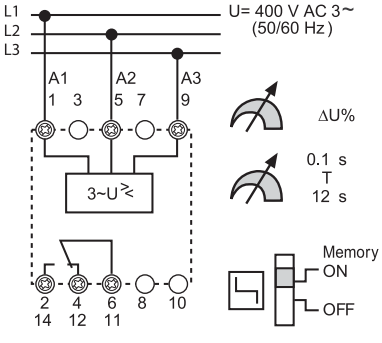


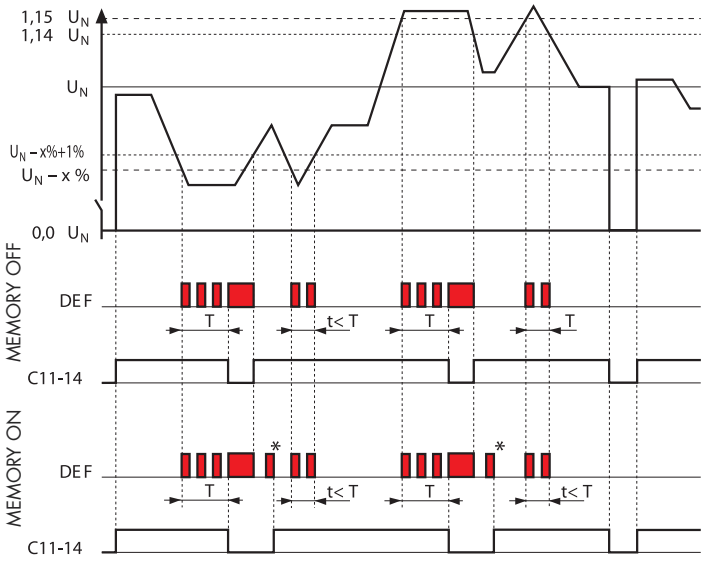
Switch off
Immediately if monitored value is outside of the set points.

Switch on
After expiry of the time T and if monitored value is within the set points.

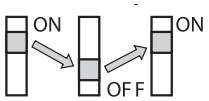
C = output contact
Normally open 11-14 (6-2) closed.

Type 71.31.8.400.1021





*RESET MEMORY = By power-down or switch manipulation from ON to OFF to ON



Switch off
If monitored value is outside of the set points and time T has elapsed.

Switch on - MEMORY OFF
Immediately monitored value returns within limits (off-set by 1% hysteresis).

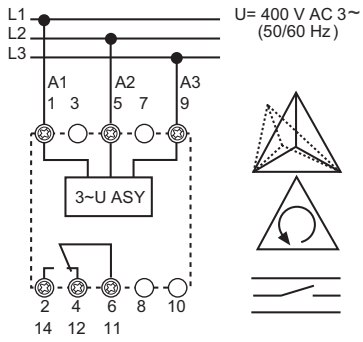
Switch on - MEMORY ON
As above, but subject to the RESET operation having been actioned.

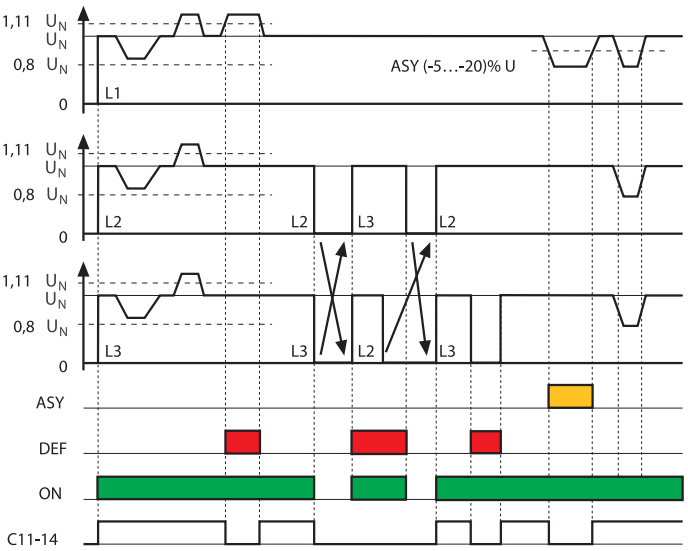
RESET
By Memory switch manipulation from ON to OFF and back to ON, or power down.

C = output contact
Normally open 11-14 (6-2) closed.

Functions

Type 71.31.8.400.2000





Switch off
Phase asymmetry
Incorrect phase rotation
Phase loss

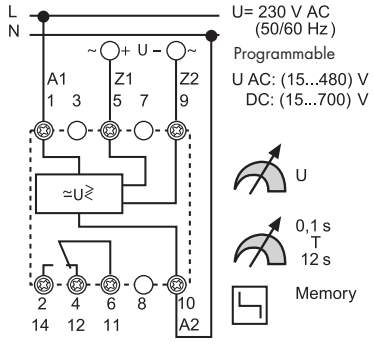
LED • ASY yellow
Phase asymmetry

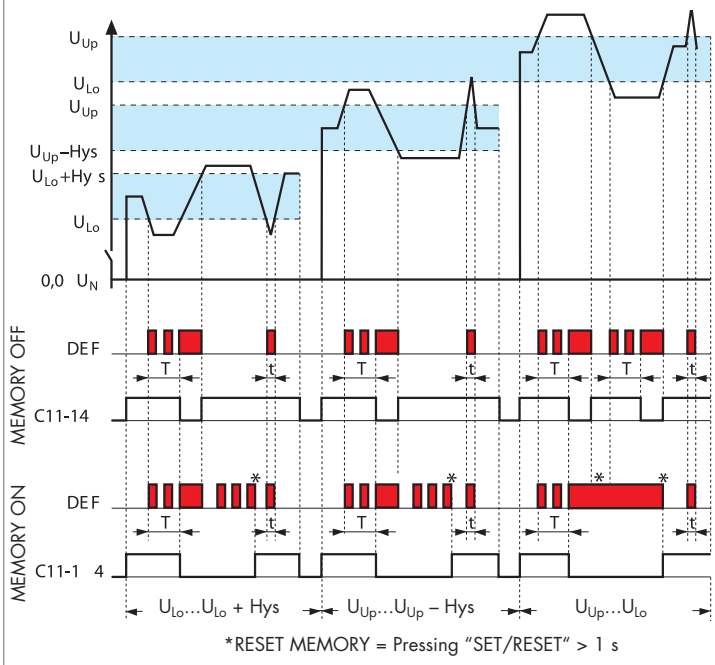
LED • DEF red
Voltage to A1 (1) and/or A2 (5) > 1.11 U_N

LED • ON green
Monitoring system is active and 400 V supply voltage is connected to 1-5 or A1-A2.

C = output contact
Normally open 11-14 (6-2) closed.

Type 71.41.8.230.1021





Switch off
U_{Lo} – mode
If the monitored value is less than the lower-limit and, time T has expired.

U_{Up} – mode
If the monitored value is higher than the upper limit, and time T has expired.

U_{Lo} U_{Up} – mode
If the monitored value of voltage is outside of the upper or lower voltage limits, and time T has expired.

Voltage dips < T do not result in output relay switching off.

Switch on
U_{Lo} or U_{Up} – modes
When passing the hysteresis value.

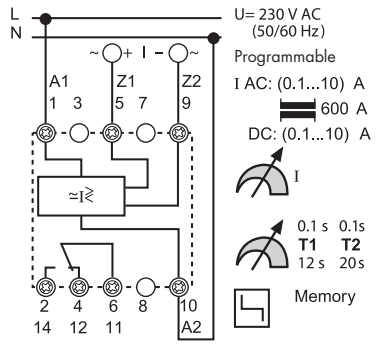
U_{Lo} U_{Up} – mode
When passing the U_{Lo} or U_{Up} value.

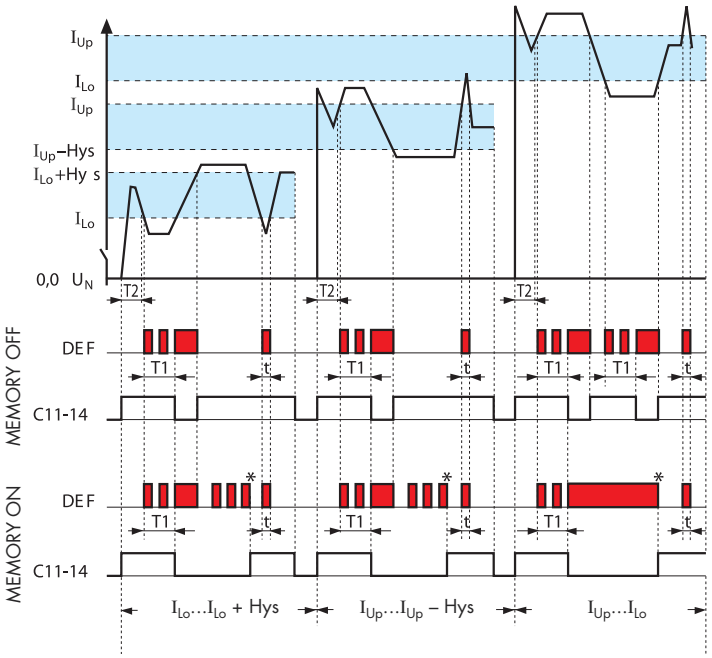
RESET MEMORY
Pressing "SET/RESET" > 1 sec.

C = output contact
Normally open 11-14 (6-2) closed.

Functions

Type 71.51.8.230.1021





*RESET MEMORY = Pressing "SET/RESET" > 1 s

Switch off
I_{Lo} – mode
If the monitored value is less than the lower-limit and, time T1 has expired.

I_{Up} – mode
If the monitored value is higher than the upper limit, and time T1 has expired.

I_{Lo} I_{Up} – mode
If the monitored value of voltage is outside of the upper or lower limits, and time T1 has expired.

Inrush current < T2 is ignored

Current dips < T1 do not result in output relay switching off.

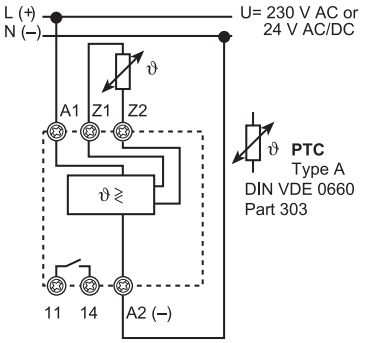
Switch on
I_{Lo} or I_{Up} – modes
When passing the hysteresis value.

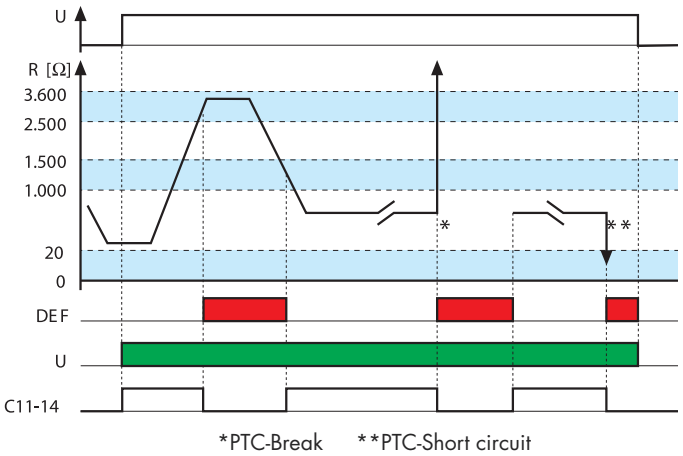
I_{Lo} I_{Up} – mode
When passing the I_{Lo} or I_{Up} value.

RESET MEMORY
Pushing "SET/RESET" > 1 sec.

C = output contact
Normally open 11-14 (6-2) closed.

Type 71.91.x.xxx.0300





*PTC-Break **PTC-Short circuit

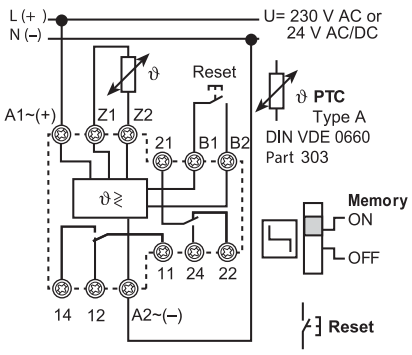
Switch off
- Thermistor line break
- Over temperature R_{PTC} > (2.5...3.6)kΩ,
- Thermistor line short circuit (R_{PTC} < 20Ω)
- Loss of supply

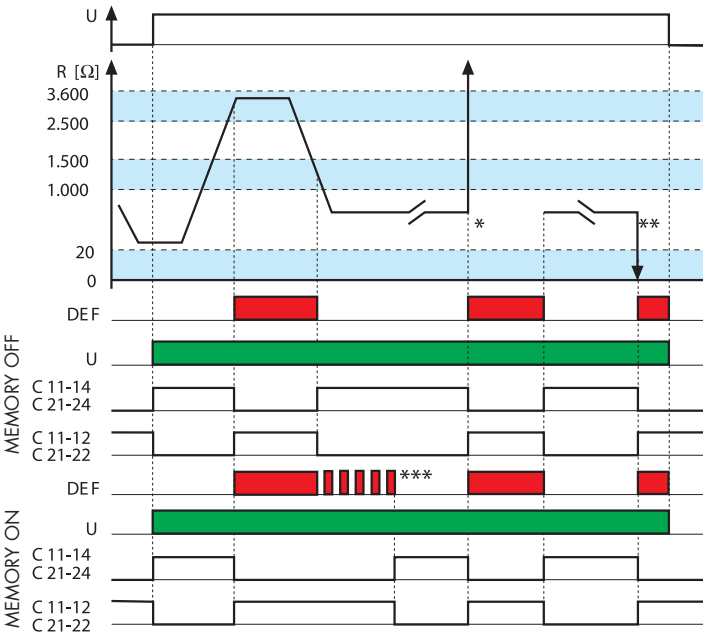
Switch on
Temperature within limits
R_{PTC} > (1.0...1.5)kΩ on power-up.
(1...1.5)kΩ on cooling.

C = output contact
Normally open 11-14
Closed when temperature within limits.

Functions

Type 71.92.x.xxx.0001





*PTC-Break **PTC-Short circuit
*** RESET MEMORY = Operate the RESET key, or interrupt the supply.

Switch off
- Thermistor line break
- Over temperature R_{PTC} > (2.5...3.6)kΩ,
- Thermistor line short circuit (R_{PTC} < 20Ω)
- Loss of supply

Switch on
Temperature within limits (20Ω...2.5kΩ) on power-up.
R_{PTC} > (1...1.5)kΩ on cooling.

Select MEMORY OFF
If monitored value is expected to cross the resetting threshold.

Select MEMORY ON
If monitored value is expected to remain within limits.

RESET MEMORY
Operate the RESET key, or interrupt the supply.

C = output contact
Normally open 11-14 (21-24)
Closed when temperature within limits.

Normally closed 11-22 (21-22)
Closed when temperature outside limits / Power off.

Features

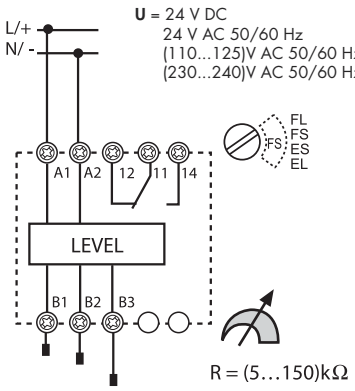
Level control relays for conductive liquids

72.01 - Adjustable sensitivity
72.11 - Fixed sensitivity

- Emptying or filling functions
- LED indicator
- Reinforced insulation (6 kV - 1.2/50 µs) between:
  - supply and contacts
  - electrodes and supply
  - contacts and electrodes
- 35 mm rail (EN 60715) mount
- Control about a single level or between Min./Max. limits
- 72.01 available also for supply 400 V
- 72.01 available also with sensitivity range (5...450) kΩ adjustable
- 72.01 available also for contact loads down to 5 V 1 mA

72.01

- Sensitivity range (5...150) kΩ adjustable
- Delay time (0.5s or 7s) switch selectable
- Emptying or filling functions switch selectable



FL = Filing – 7s delay
FS = Filling – 0.5s delay
ES = Emptying – 0.5s delay
EL = Emptying – 7s delay

72.11

- Sensitivity fixed 150 kΩ
- Delay time fixed: 1s
- Emptying or filling functions link selectable

Features

Priority change relay
Special relay for alternating loads, for applications with pumps, compressors, air conditioning or refrigeration units

- 2 independent NO output, 12 A
- 4 functions
- 2 independent control signals, insulated from supply
- 110...240 V and 24 V AC/DC supply versions
- Modular housing, 35 mm wide
- 35 mm rail (EN 60715) mount
- Cd-free contact material

Screw terminal

Max cable length between electrode and relay (types 72.01/72.11)		m	200 (max. capacitance of 100 nF/km)		

* There is no electrical isolation between electrodes and supply voltage for the 24 V DC types (72.x1.9.024.0000). Therefore, for SELV applications it would be necessary to use a SELV (non-grounded) power supply. In the case of a PELV (grounded) power supply take care to protect the level control relay against harmful circulating currents by ensuring that no electrodes are grounded.
However, there is no such problem for the 24 V AC types (72.x1.8.024.0000) which, by virtue of an internal isolating transformer, assure reinforced isolation between electrodes and supply.

Functions for 72.01 and 72.11

U = Supply voltage
B1 = Max level electrode
B2 = Min level electrode
B3 = Common
= Contact 11-14
Z1-Z2 = Link to select emptying (Type 72.11)

LED	Supply voltage	NO output contact	Contacts Open	Contacts Closed
	OFF	Open	11 - 14	11 - 12
	ON	Open	11 - 14	11 - 12
	ON	Open (Timing in Progress)	11 - 14	11 - 12
	ON	Closed	11 - 12	11 - 14

Function and Run-on time

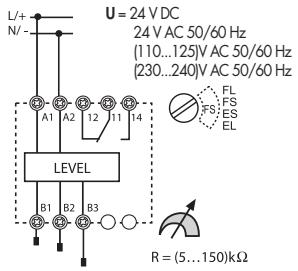
Type 72.01	Type 72.11
FL = Level control by Filling, Long (7sec) run-on delay.	**F** = Level control by Filling, Z1–Z2 open. Run-on time fixed at 1sec.
FS = Level control by Filling, Short (0.5sec) run-on delay.	**E** = Level control by Emptying, Z1–Z2 linked. Run-on time fixed at 1sec.
ES = Level control by Emptying, Short (0.5sec) run-on delay.	
EL = Level control by Emptying, Long (7sec) run-on delay.	

Filling functions

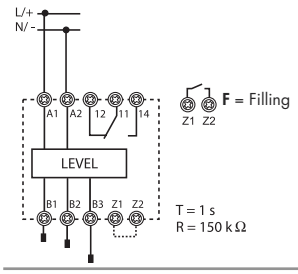
Wiring diagram

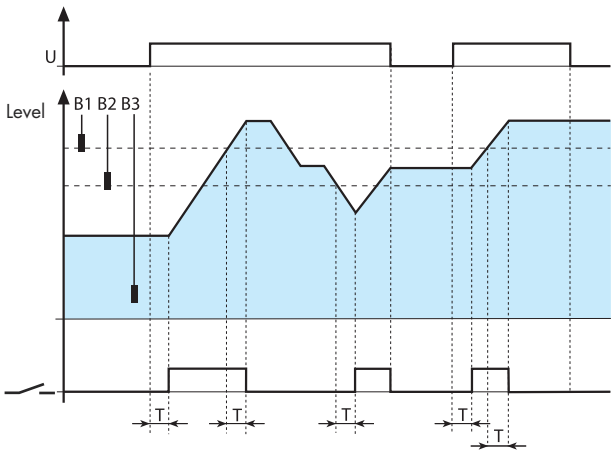
Examples with **3 electrodes**

Type 72.01



Type 72.11





Filling Control – between Min. and Max. levels.
Under normal operation the liquid level can be expected to cycle between the Minimum and the Maximum electrodes, B2 and B1 (plus a degree of over and under-shoot).

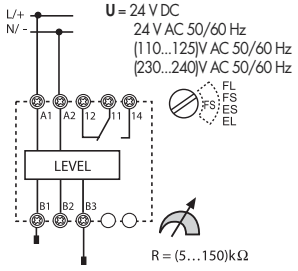
Switch On:
• On "power-up", if the liquid is below B1 the output relay will operate after time T has expired.
• On the liquid level falling below B2, the output relay will operate after time T has expired.

Switch Off:
• On the liquid level reaching electrode B1, the output relay will de-energise after time T has expired.
• On "power-off", the output relay will immediately de-energise.

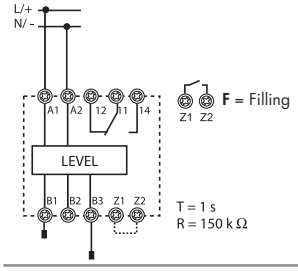
Wiring diagram

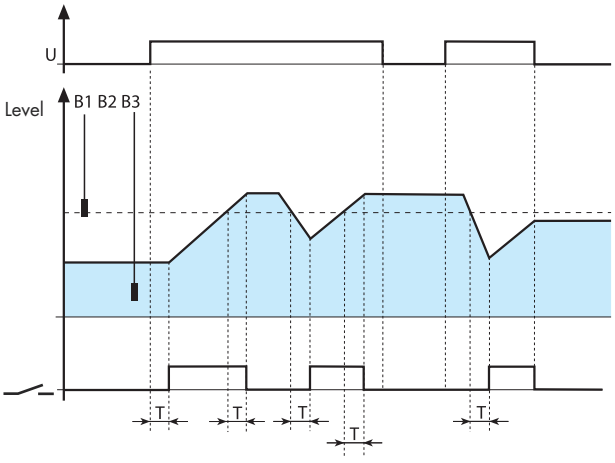
Examples with **2 electrodes**

Type 72.01



Type 72.11





Filling Control – about a single level, B1.
Under normal operation the liquid evel can be expected to cycle about the level set by electrode B1 with a degree of over and under-shoot.

Switch On:
• On "power-up", if the liquid is below B1 the output relay will operate after time T has expired.
• On the liquid level falling below B1, the output relay will operate after time T has expired.

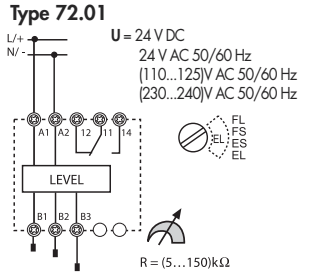
Switch Off:
• On the liquid level reaching electrode B1, the output relay will de-energise after time T has expired.
• On "power-off", the output relay will immediately de-energise.

Emptying functions

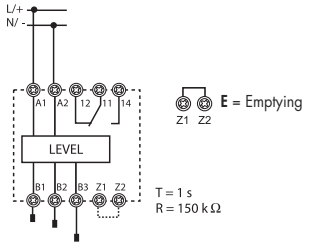
Wiring diagram

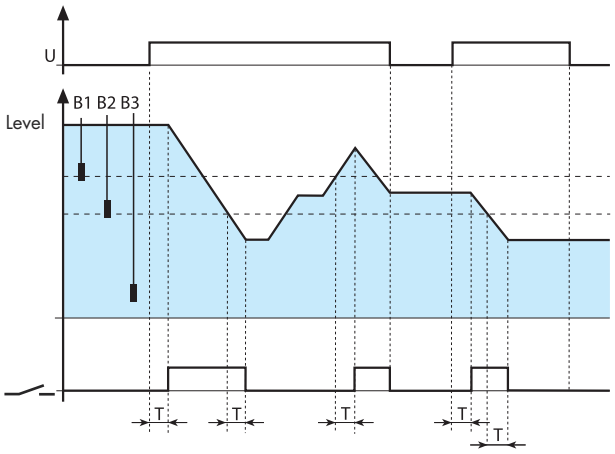
Examples with **3 electrodes**

Type 72.01



Type 72.11





Emptying Control – between Max. and Min. levels.
Under normal operation the liquid level can be expected to cycle between the Maximum and the Minimum electrodes, B1 and B2 (plus a degree of over and under-shoot).

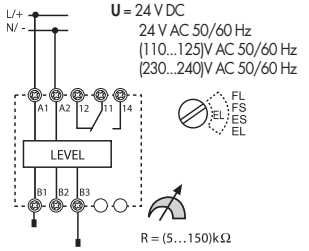
Switch On:
• On "power-up", if the liquid level is above B2 the output relay will operate after time T has expired.
• On the liquid level rising to B1, the output relay will operate after time T has expired.

Switch Off:
• On the liquid level falling below electrode B2, the output relay will de-energise after time T has expired.
• On "power-off", the output relay will immediately de-energise.

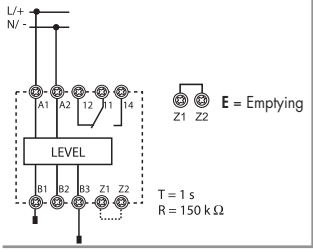
Wiring diagram

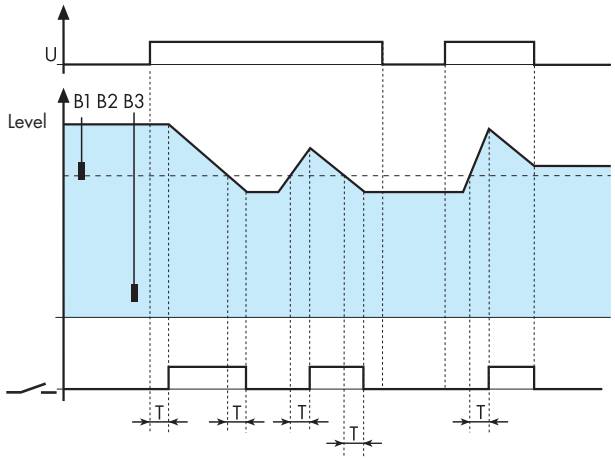
Examples with **2 electrodes**

Type 72.01



Type 72.11





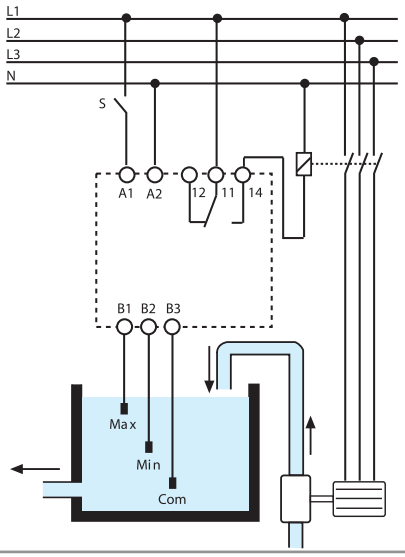
Emptying Control about a single level, B1.
Under normal operation the liquid level can be expected to cycle about the level set by electrode B1 with a degree of over and under-shoot.

Switch On:
• On "power-up", if the liquid is above B1 the output relay will operate after time T has expired.
• On the liquid level rising to B1, the output relay will operate after time T has expired.

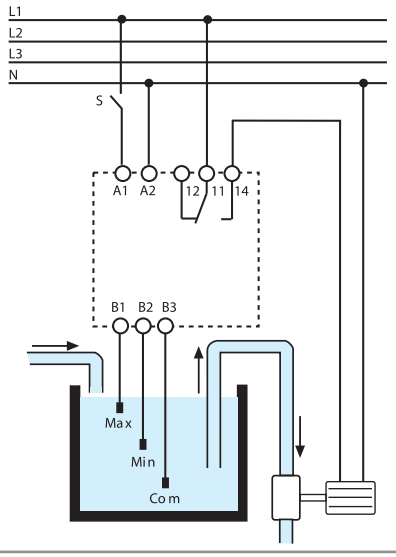
Switch Off:
• On the liquid level falling below electrode B1, the output relay will de-energise after time T has expired.
• On "power-off", the output relay will immediately de-energ

Applications for 72.01 and 72.11

FILLING function:
Examples with 3 electrodes and with a contactor connected to the contact.



EMPTYING function:
Examples with 3 electrodes and with a motor pump connected directly to the contact.



The 72 series level control relays work by measuring the resistance through the liquid, between the common (B3) electrode and Min. and Max. electrodes (B2 and B1). If the tank is metalic, then this can be substituted as the B3 electrode.

Take care to ensure that the liquid has a suitable resistivity – see below:

SUITABLE LIQUIDS
- City water
- Well water
- Rainwater
- Sea water
- Liquids with low-percentage alcohol
- Wine
- Milk, Beer, Coffee
- Sewage
- Liquids fertilizer

UN-SUITABLE LIQUIDS
- Demineralised water
- Fuels
- Oil
- Liquids with high-percentage alcohol
- Liquid gas
- Paraffins
- Ethylene glycol
- Paint

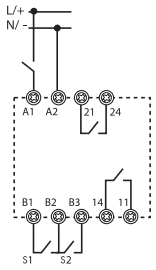
VII-2012, www.findernet.com

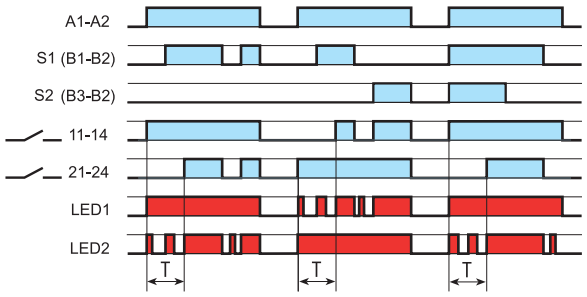
Functions for 72.42

A1-A2 = Supply voltage
S1 (B1-B2) = Control signal 1
S2 (B3-B2) = Control signal 2
⎯⎯ = Contact 1 (11-14) and Contact 2 (21-24)
LED 1 = Output 1
LED 2 = Output 2

LED	
	Device in stand-by, output not activated
	Output not activated, timing in progress
	Output not activated (only functions M1/M2)
	Output activated

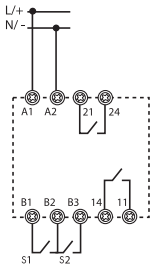
Wiring diagram

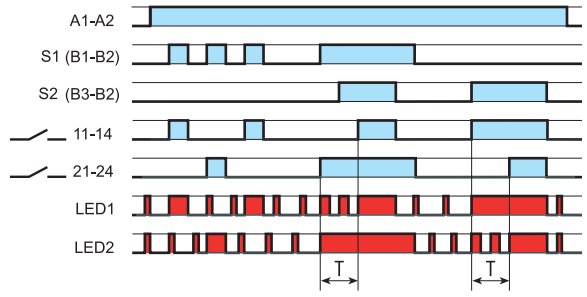




(MI) Outputs alternate on successive applications of supply voltage

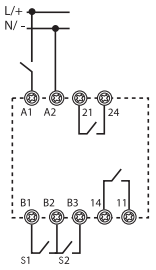
- Application of the supply voltage to A1-A2 forces just one output contact to close, but the contact that closes will alternate between 11-14 and 21-24 on each successive application of the supply – ensuring even wear across both motors.
- The other output contact can be forced closed by the closure of either S1 or S2 - but to limit high current surges the other motor cannot start within T seconds of the first motor.

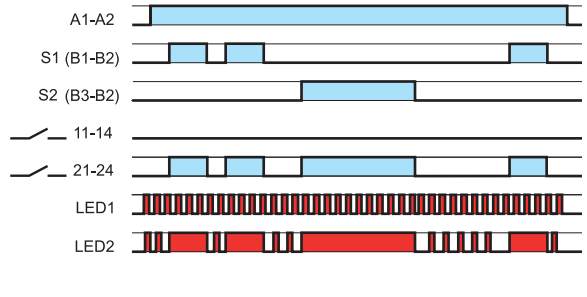




(ME) Outputs alternate according to control signal

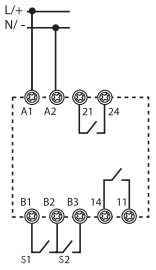
- The supply voltage is permanently applied to A1-A2. When closed, S1 forces just one output contact to close. The contact that closes will alternate between 11-14 and 21-24 on each successive S1 closure - ensuring even wear across both motors.
- If closed, S2 forces both output contacts to close (irrespective of S1). However, to limit high current surges, both motors cannot start within T seconds of each other.

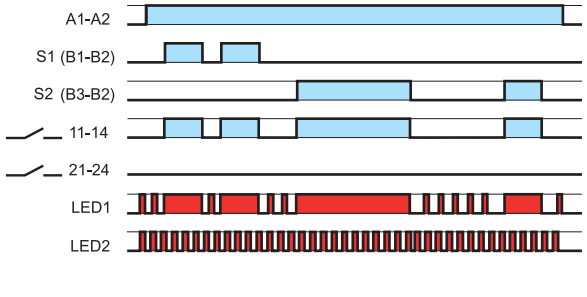




(M2) Output 2 (21-24) only

- Supply permanently applied to A1-A2.
- Closure of either S1 or S2 will close output contact 2 (21-24). Use when load 1 (11-14) is out of service.

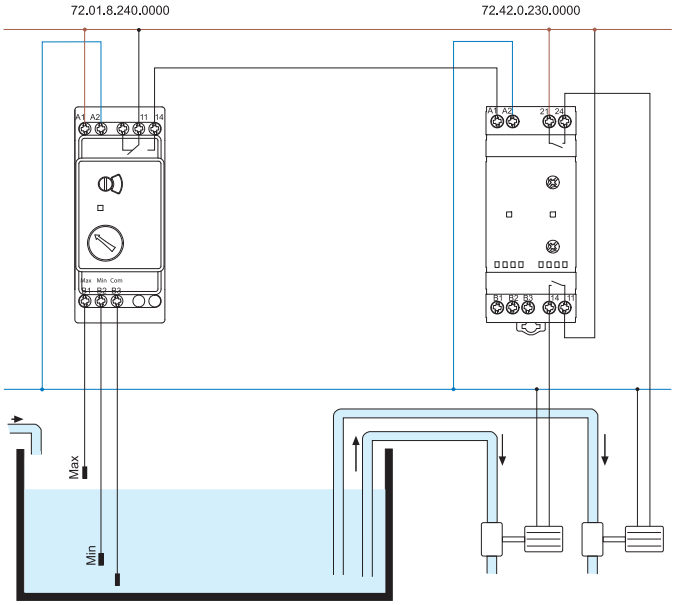




(M1) Output 1 (11-14) only

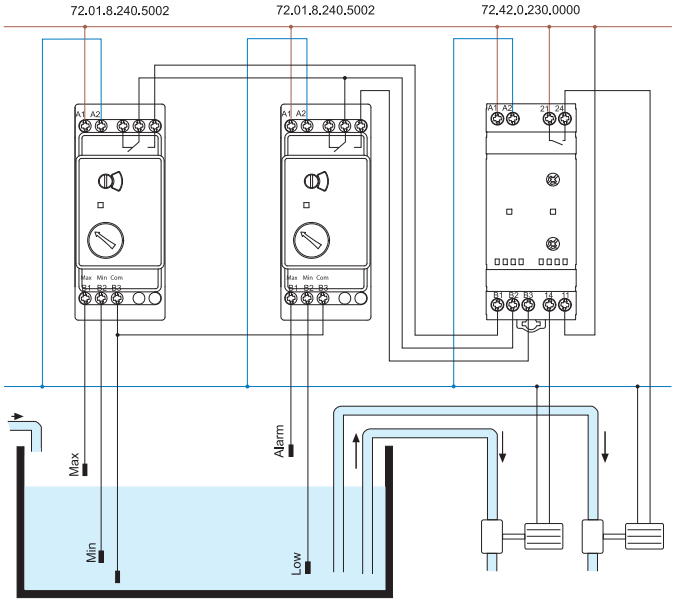
- Supply permanently applied to A1-A2.
- Closure of either S1 or S2 will close output contact 1 (11-14). Use when load 2 (21-24) is out of service.

MI function example



This shows the 72.42 Priority change relay working in conjunction with a single 72.01 level controller. Under normal conditions the liquid level is expected to remain within the range shown as Min to Max. In this case the function of the 72.42 will be to alternate the duty between both pumps, to even wear across both pumps. There is no provision to run both pumps simultaneously.

ME function example



This shows the 72.42 Priority change relay working in conjunction with two 72.01 level controllers. Under normal conditions the liquid level is expected to remain within the range shown as Min to Max. In this case the function of the 72.42 will be to alternate the duty between both pumps, to even wear across both pumps. Should the liquid level rise above the Alarm level then the function of the 72.42 will call for the simultaneous operation of both pumps, by virtue of the signal to terminal B3 from the Alarm/Low level controller.

Note: due to the low level of 72.42 control signals, it is suggested to use level controller 72.01.8.240.5002 because of its superior low load switching capability.

Outline drawings

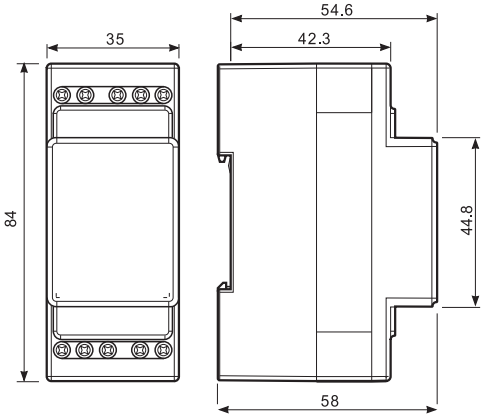
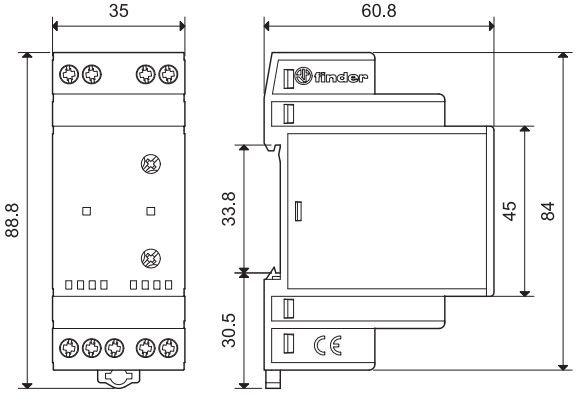
Screw terminal



72.42
Screw terminal



VII-2012, www.findernet.com

Accessories for 72.01 and 72.11

072.01.06

072.02.06

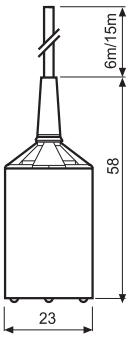
Suspended electrode for conductive liquids, complete with cable. Suitable for level monitoring in wells and reservoirs not under pressure.
Order appropriate number of electrodes - additional to the relay.

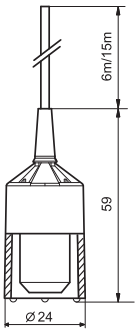
•Electrode compatible with food processing applications (according to European Directive 2002/72 and cod. FDA title 21 part 177):

Cable length: 6 m (1.5 mm²)	072.01.06
Cable length: 15 m (1.5 mm²)	072.01.15

• Electrode for swimming pools with high levels of chlorine, or in salt-water pools with high levels of salinity:

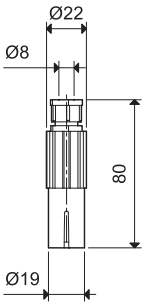
Cable length: 6 m (1.5 mm²)		072.02.06
Technical data		
Max. liquid temperature	°C	+100
Electrode material		stainless steel (AISI 316L)





072.31

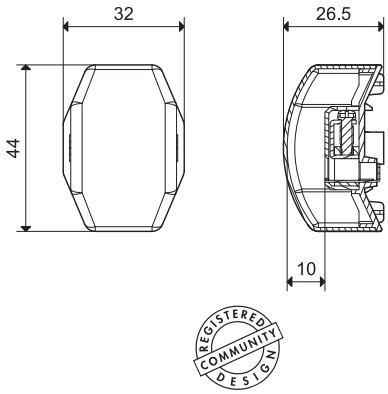
Suspended electrode		
Order appropriate number of electrodes additional to the relay.		072.31
Technical data		
Max liquid temperature	°C	+ 80
Cable grip	mm	Ø ≤ 3...6
Electrode material		stainless steel (AISI 316L)
Max screw torque	Nm	0.7
Max. wire size	mm²	1 x 2.5
	AWG	1 x 14
Wire strip length	mm	9



Accessories for 72.01 and 72.11

072.11

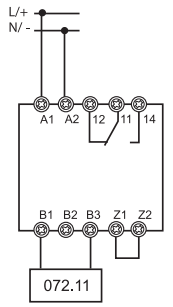
Floor water sensor, designed for the detection and reporting of the presence of floor surface water.			072.11
Technical data			
Electrode material		stainless steel (AISI 316L)	
Wire capability of terminals			
Max screw torque	Nm	0.8	
Max. wire size		solid cable	stranded cable
	mm^2	1 x 6 / 2 x 6	1 x 6 / 2 x 4
	AWG	1 x 10 / 2 x 10	1 x 10 / 2 x 12
Wire strip length	mm	9	
Other data			
Distance between electrodes and floor	mm	1	
Floor fixing screw diameter		Maximum M5	
Maximum cable diameter	mm	10	
Maximum length of cable connecting sensor to relay m		200 (with capacitance of 100 nF/km)	
Max. liquid temperature	°C	+100	



Floor surface water sensor for connection to electrode terminals (B1 and B3) of 72.01 or 72.11 level control relay, set in Emptying function (ES or E respectively).

For ice bank control in refrigeration systems it is suggested to use the high sensitivity (5...450kOhm) types - 72.01.8.024.0002 or 72.01.8.230.0002.

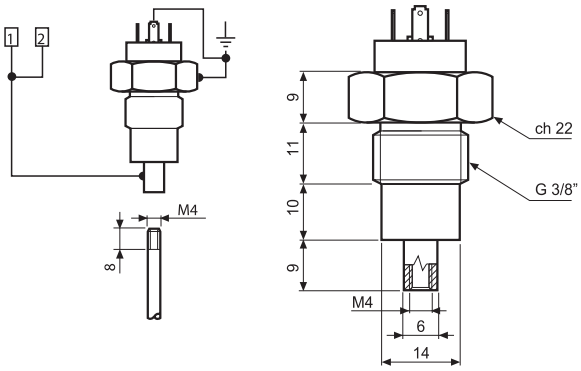
Function



Z1, Z2 only for types 72.11

072.51

Electrode holder with two pole connector, one connected directly to the electrode and the second connected to the grounded installation thread. Suitable for metal tank with G3/8" linkage. Electrode not incuded. Order appropriate number of electrodes holders - additional to the relay.		072.51
Technical data		
Max liquid temperature	°C	+ 100
Max tank pressure	bar	12
Cable grip	mm	Ø ≤ 6
Electrode material		stainless steel (AISI 316L)



VII-2012, www.findernet.com

Accessories for 72.01 and 72.11

Application notes for 72.01 and 72.11

Applications
The main application for these relays is for the sensing and control of the level of conductive liquids.
Selectable options allow for this control to be achieved either through a filling operation or through an emptying operation, and in either case "positive logic" is used.
Level control can be achieved around a single level – using 2 electrodes, or between Minimum and Maximum levels – using 3 electrodes.
Additionally, the 72.01, with its adjustable sensitivity setting, can be ideal for monitoring the conductivity of liquids.

Positive safety logic
These relays work according to the principle that it is the closure of a normally open output contact that will be used to control the pump, both in filling and emptying applications. Consequently, in the event of a failure of the supply local to the relay, the filling or emptying will cease. This is generally considered to be the safest option.

Overrunning of tank on filling
Care must be exercised to ensure that the tank cannot overrun. Factors that have to be considered are the pump performance, the rate of discharge from the tank, the position of the single level electrode (or maximum electrode), and the run-on time delay. Keeping the time delay to a minimum will minimise the possibility of tank overrun, but will increase the installed switching rate.

Prevent dry running of pump on emptying
Care must be exercised to ensure that the pump cannot run dry. Similar considerations must be given as outlined above. In particular, keeping the run-on time delay to a minimum will minimise the risk, but again, it will increase the installed switching rate.

Run-on time
In commercial and light industrial applications the use of a short Run-on time delay is more appropriate, due to the relatively small size of tanks and the consequential need to react quickly to the change in level. Larger scale industrial applications involving larger tanks and powerful pumps must avoid a frequent switching cycle, and the use of the 72.01 set for the longer Run-on time of 7 seconds is suggested.
Note that the short run-on time will always achieve closer control to the desired level(s), but at the cost of more frequent switching.

Electrical life of the output contact
The electrical life of the output contact will be enhanced where a larger distance between the Max. and Min. electrodes (3-electrode control) can be realised. A smaller distance, or level control to a single level (2-electrode control), will result in more frequent switching and therefore a shorter electrical life for the contacts. Similarly, the long run-on time will enhance, and the short time will reduce, electrical life.

Pump control
Small single-phase pumps within the kW (0.55 kW - 230 V AC) rating stated may be driven directly by the level relay output contact. However, where very frequent switching is envisaged, it is better to "slave" a higher power relay or contactor to drive the pump motor. Large pumps (single-phase and three-phase) will of course require an interposing contactor.

Water leakage and condensation in oil lubrication systems
To detect condensed water vapour or water leakage within lubricating systems, monitor by sensors connected to B1 - B3 (Function E or ES, Z1 - Z2 linked). Condensed water vapour has low conductivity, therefore choose monitoring relay type 72.01.8.240.0002 with sensitivity range of (5...450) kOhm and sensor type 072.11.

Floor flooding control
To detect floor water due to spills or flooding, monitor using sensors connected to B1 - B3 (Function E or ES, Z1 - Z2 linked).
Choose monitoring relay type 72.01.8.240.0000 or 72.11.8.240.0000, together with floor water sensor type 072.11.

Electrodes and cable lengths
Normally 2 electrodes or 3 electrodes will be required for control about a single level, or control between Min. and Max. levels, respectively. However, if the tank is made of conductive material it is possible to use this as the common electrode, B3, if electrical connection can be made to it.
The maximum permitted length of cable between the electrode and the relays is 200m, for a cable not exceeding 100nF/km.
A maximum of 2 relays and associated electrodes can be employed in the same tank – if two different levels need monitoring.
Note: It is permitted to make direct electrical connection between terminals B1-B3, and B2-B3, (without using electrodes/liquid), but in this case it is not possible to set up the sensitivity.

Electrode choice
The choice of electrodes may depend on the liquid being monitored. Standard electrodes 072.01.06 and 072.51 are suitable for many applications but some liquids may be corrosive for example, and may therefore require custom made electrodes - but these can usually be used with the 72.01 and 72.11 relays.

On site commissioning
To confirm the suitability of the relay sensitivity to the resistance between electrodes it is suggested that the following checks are made. For convenience it is suggested that the fill function and the shortest run-on time are selected.

Commissioning
Follow these setting-up instructions to achieve correct operation:
72.01
Select the function "FS" (Filling and Short delay of 0.5 s), and set the sensitivity control to 5 kΩ. Ensure that all electrodes are immersed in the liquid - expect the output relay to be ON. Then, slowly rotate the sensitivity control in the 150 kΩ direction until the level relay switches OFF (internal output relay will switch OFF and red LED will switch slowly flash).
(If the level relay does not switch OFF then, either the electrodes are not immersed, or the liquid has too high impedance or the distance between electrodes is too long).
Finally, select the filling or emptying function as required, run in real time and confirm that the level relay works as required.
72.11
Select the Filling function "F", (Z1 – Z2 open). Ensure that all electrodes are immersed in the liquid, but leave electrode B3 disconnected – output relay should be ON. Connect electrode B3, and the level relay should switch OFF
(internal output relay will switch OFF and red LED will switch slowly flash).
(If the level relay does not switch OFF then, either the electrodes are not immersed, or the liquid has too high impedance or the distance between electrodes is too long.)
Finally, select the filling or emptying function as required, run in real time and confirm that the level relay works as required.

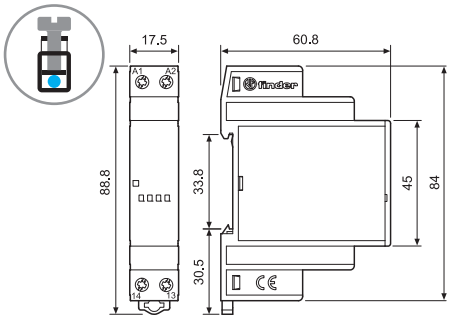
VII-2012, www.findernet.com

Features

5 A modular SSR, 1 NO output

- 17.5 mm housing
- AC output (with back to back SCR)
- 5 kV (1.2/50 µs) insulation between Input and Output
- Zero-crossing and random switch-on versions available
- High switching speed
- High endurance
- Silent switching
- Spark and bounce-free switching
- Low control power
- 35 mm rail (EN 60715) mount

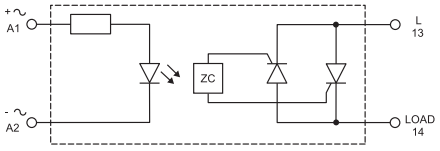
77.01
Screw terminal



* see L77-3 diagram page 3
** see L77-1 and L77-2 diagrams page 3

NEW 77.01.x.xxx.8050

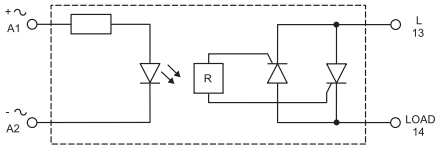
Zero-crossing switch-on
Suggested applications:
- Lamp inrush current reduction (CFL - Compact Fluorescent energy-saving Lamps and similar)
- Heater control
- Solenoid, contactor driver



Simplified circuit diagram

NEW 77.01.x.xxx.8051

Random switch-on
Suggested applications:
- Fine controls involving shorter time (specially motor control)
- AC supply phase different from AC output phase
- 3-phase general purpose



Simplified circuit diagram

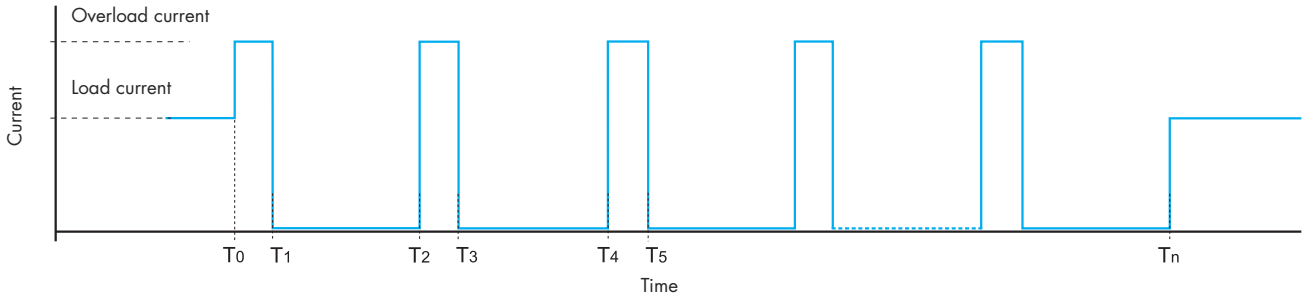
Hiccup mode



Under normal conditions, the 78 Series Power Supply supplies the current required by the load.
However, under abnormal conditions such as a short circuit or heavy overload (T_0) the output voltage will be rapidly reduced to zero - followed by the current (T_1). After approximately 2 seconds (T_1 to T_2), the power supply checks for the persistence of the anomaly over the time period T_2 to T_3 (30 to 100ms - dependent on the type of anomaly). If the anomaly persists, as shown above, the current is again reset to 0 A for a further 2 s (T_3 to T_4). This "hiccup" process is repeated until the anomaly is removed (T_n), whereon the power supply then returns to normal working.

Sheet of marker tags, plastic, 72 tags, 6x12 mm	060.72

019.01

Identification tag, plastic, 1 tag, 17x25.5 mm	019.01

Features

Multi-function and mono-function timer range

80.01 - Multi-function & multi-voltage
80.11 - On-delay, multi-voltage

- 17.5 mm wide
- Six time scales from 0.1s to 24h
- High input/output isolation
- 35 mm rail (EN 60715) mount
- "Blade + cross" - both flat blade and cross head screw drivers can be used to adjust the range and function selectors, the timing trimmer, and to disengage the rail mounting clip
- New multi-voltage versions with "PWM clever" technology

80.01 / 80.11

Features

Mono-function timer range

80.21 - Interval, multi-voltage
80.41 - Off-delay with control signal, multi-voltage
80.91 - Asymmetrical flasher, multi-voltage

- 17.5 mm wide
- Six time scales from 0.1s to 24h
- High input/output isolation
- 35 mm rail (EN 60715) mount
- "Blade + cross" - both flat blade and cross head screw drivers can be used to adjust the range and function selectors, the timing trimmer, and to disengage the rail mounting clip
- New multi-voltage versions with "PWM clever" technology

Functions

U = Supply voltage

S = Signal switch

= Output contact

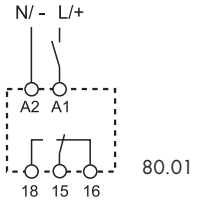
LED*	Supply voltage	NO output contact	Contacts	
			Open	Closed
	OFF	Open	15 - 18	15 - 16
	ON	Open	15 - 18	15 - 16
	ON	Open (Timing in Progress)	15 - 18	15 - 16
	ON	Closed	15 - 16	15 - 18

* The LED on type 80.61 is illuminated only when the supply voltage is applied to the timer; during the timing period the LED is not illuminated.

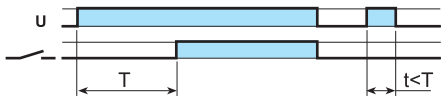
Wiring diagram

Without control signal = Start via contact in supply line (A1).
With control signal = Start via contact into control terminal (B1).

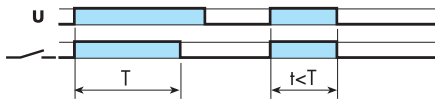
Without control signal



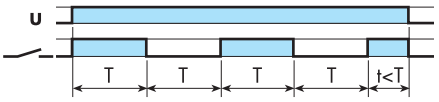
Type
80.01
80.71



(AI) On-delay.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.

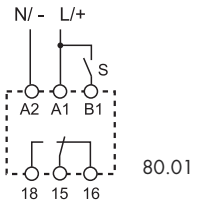


(DI) Interval.
Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

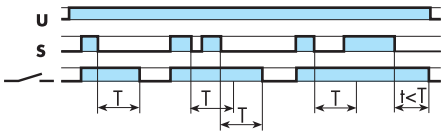


(SW) Symmetrical flasher (starting pulse on).
Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).

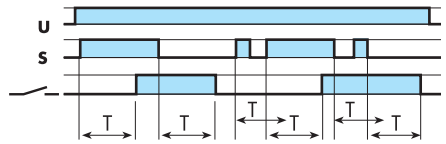
With control signal



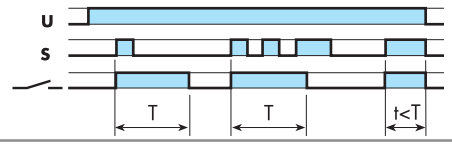
80.01
80.71



(BE) Off-delay with control signal.
Power is permenently applied to the timer. The output contacts transfer immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which time the output contacts reset.

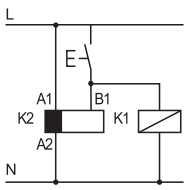


(CE) On- and off-delay with control signal.
Power is permenently applied to the timer. Closing the Signal Switch (S) initiates the preset delay, after which time the output contacts transfer. Opening the Signal switch initiates the same preset delay, after which time the output contacts reset.

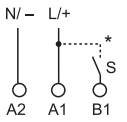


(DE) Interval with control signal on.
Power is permenently applied to the timer.
On momentary or maintained closure of Signal Switch (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.

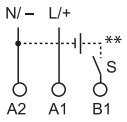
NOTE: The function must be set before energising the timer.



• Possible to control an external load, such as another relay coil or timer, connected to the control signal terminal B1.



* With DC supply, positive polarity has to be connected to B1 terminal (according to EN 60204-1).

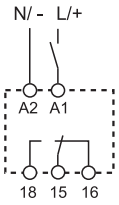


** A voltage other than the supply voltage can be applied to the command Start (B1), example:
A1 - A2 = 230 V AC
B1 - A2 = 12 V DC

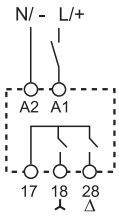
Functions

Wiring diagram

Without control signal

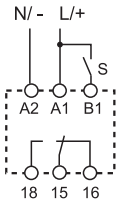


80.11/21/61



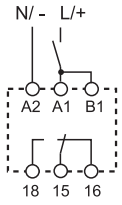
80.82

With control signal



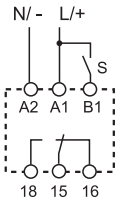
80.41

Without control signal



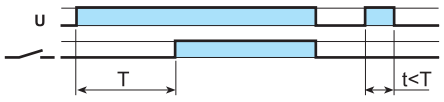
80.91

With control signal



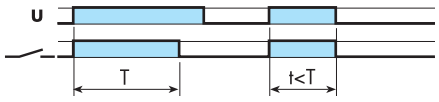
80.91

Type 80.11



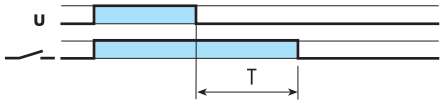
(AI) On-delay.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.

80.21



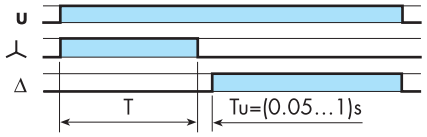
(DI) Interval.
Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

80.61



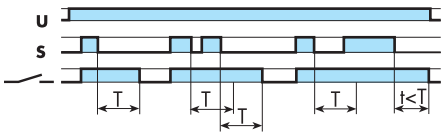
(BI) Power off-delay (True off-delay).
Apply power to timer (minimum 500ms). Output contacts transfer immediately. Removal of power initiates the preset delay, after which time the output contacts reset.

80.82



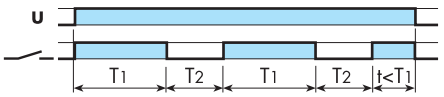
(SD) Star-delta.
Apply power to timer. The star contact (⅄) closes immediately. After preset delay has elapsed the star contact (⅄) resets. After a further transfer time variable from (0.05…1)s the delta contact (Δ) closes and remains in that position, until reset on power off.

80.41

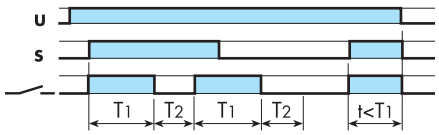


(BE) Off-delay with control signal.
Power is permenently applied to the timer.
The output contacts transfer immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which time the output contacts reset.

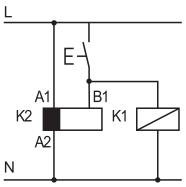
80.91



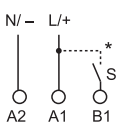
(LI) Asymmetrical flasher (starting pulse on).
Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ON (T1) and OFF (T2) times are independently adjustable.



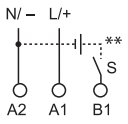
(LE) Asymmetrical flasher (starting pulse on) with control signal
Power is permenently applied to the timer.
Closing Signal Switch (S) causes the output contacts to transfer immediately and cycle between ON (T1) and OFF (T2), until opened.



• Possible to control an external load, such as another relay coil or timer, connected to the control signal terminal B1.



* With DC supply, positive polarity has to be connected to B1 terminal (according to EN 60204-1).



** A voltage other than the supply voltage can be applied to the command Start (B1), example:
A1 - A2 = 230 V AC
B1 - A2 = 12 V DC

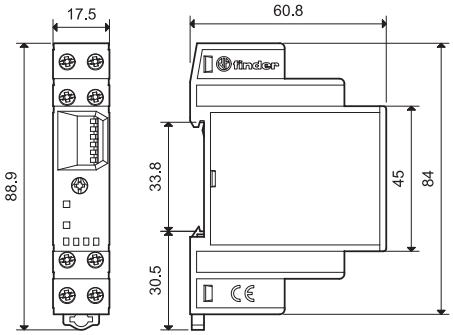
VII-2012, www.findernet.com

Features

Multi-function and multi-voltage timer

- One module 17.5 mm wide housing
- Seven functions (4 with supply start and 3 with control signal)
- Additional Reset function
- Six time ranges from 0.1s to 10h
- 35 mm rail (EN 60715) mounting

81.01
Screw terminal



NEW **81.01**

- Multi-voltage (DC non polarized)
- Multi-function
- 35 mm rail (EN 60715) mounting

AI: On-delay
DI: Interval
SW: Symmetrical flasher (starting pulse on)
SP: Symmetrical flasher (starting pulse off)
BE: Off-delay with control signal
DE: Interval with control signal on

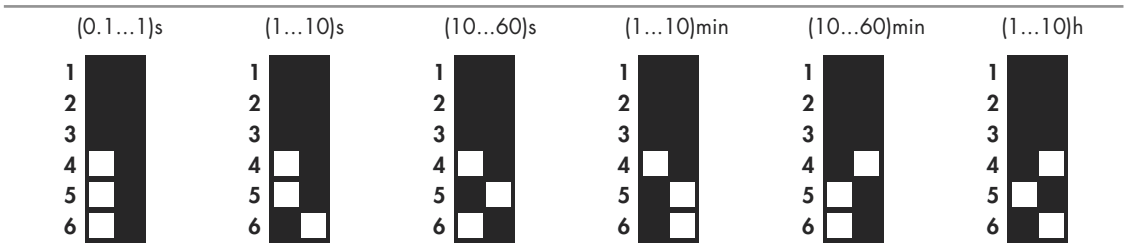
Time range setting



NOTE: time range and function must be set before energising the timer.

VII-2012, www.findernet.com

Functions

U = Supply voltage

S = Signal switch

R = Reset

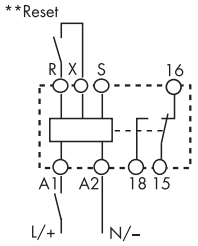
= Output contact

LED (green)	LED (red)	Supply voltage	NO output contact	Contacts Open	Contacts Closed
		OFF	Open	15 - 18	15 - 16
		ON	Open	15 - 18	15 - 16
		ON	Closed	15 - 16	15 - 18

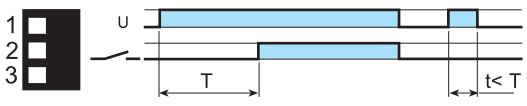
Supply Start = Start via contact in supply line (A1).
Control signal = Start via contact into control terminal (X-S).

Wiring diagram

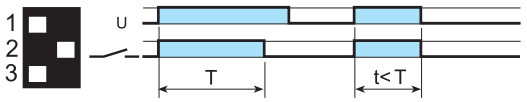
Supply START



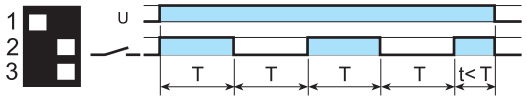
**Connection of the Reset (R-X) is optional



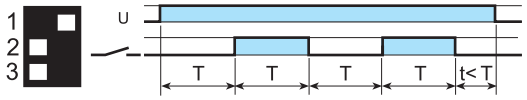
(AI) On-delay.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.



(DI) Interval.
Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

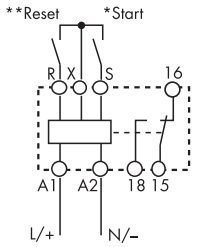


(SW) Symmetrical flasher (starting pulse on).
Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).



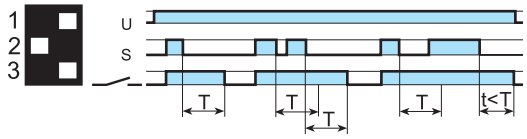
(SP) Symmetrical flasher (starting pulse off).
Apply power to timer. First transfer of contact occurs after preset time has elapsed. The timer now cycles between OFF and ON as long as power is applied. The ratio is 1:1 (time on = time off).

Control signal

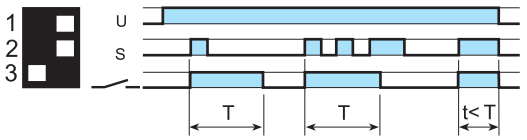


* Terminals R, S & X must not be directly connected to the timer supply voltage, but they should be considered to be at supply voltage potential for the purposes of insulation.

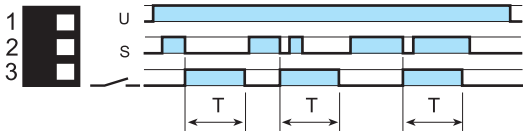
**Connection of the Reset (R-X) is optional



(BE) Off-delay with control signal.
Power is permenently applied to the timer. The output contacts transfer immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which time the output contacts reset.



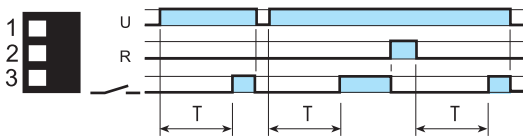
(DE) Interval with control signal on.
Power is permenently applied to the timer.
On momentary or maintained closure of Signal Switch (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.



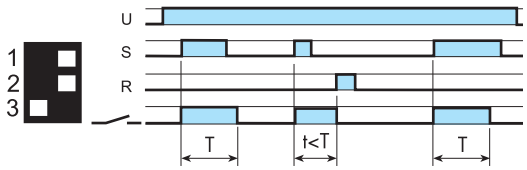
(EEb) Interval with control signal off.
Power is permenently applied to the timer.
On opening of the Signal Switch (S) the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.

RESET function (R)

For each and every function and time range, the timer is immediately reset when the reset switch is closed.



Example:
Supply START; ON delay function
Closing the external reset switch immediately resets the timer. Opening the reset switch re-initiates the timing function.



Example:
Control signal; ON pulse function.
Closing the external reset switch terminates the interval time and resets the timer. To re-start, it is necessary to open the reset switch, before closing the control signal contact.

Features

Mono-function timer range

83.11 - ON-delay, multi-voltage
83.21 - Interval, multi-voltage
83.41 - Off-delay with control signal, multi-voltage

- 1 Pole
- 22.5 mm wide
- Eight time scales from 0.05s to 10 days
- High input/output isolation
- Wide supply range (24...240)V AC/DC
- 35 mm rail (EN 60715) mount
- "Blade + cross" - both flat blade and cross head screw drivers can be used to adjust the range and function selectors, the timing trimmer, and to disengage the rail mounting clip
- Multi-voltage versions with "PWM clever" technology

on Supply terminals	(80 ÷ 230 MHz)		EN 61000-4-6	10 V
Radiated and conducted emission			EN 55022	class A
Other data				
Current absorption on control signal (B1)			< 1 mA	
	- max cable length (capacity of ≤ 10 nF / 100 m)		150 m	
	- when applying a control signal to B1, which is different from the supply voltage at A1/A2		B1 is isolated from A1 and A2 by an opto-coupler, and can therefore be operated at a voltage other than the supply voltage. If using a control signal of between (24... 48)V DC and a supply voltage of (24...240)V AC, ensure that the signal – is connected to A2 and the + is applied to B1, and that L is applied to B1 and N to A2.	
External potentiometer for 83.02			Use a 10 kΩ/ ≥ 0,25 W linear potentiometer. Maximum cable length 10 m. When using an external potentiometer, the timer automatically use its setting in place of the internal setting. Consider the voltage potential at the potentiometer to be the same as the timer supply voltage.	
Power lost to the environment	without contact current	W	1.4

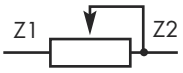
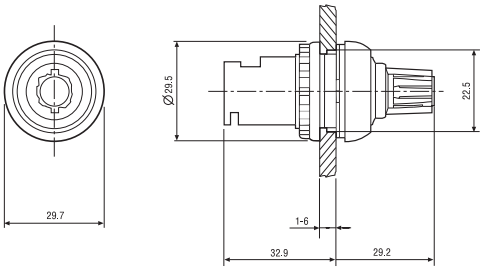
060.72

Sheet of marker tags, for types 83.01/11/21/41/62/82, plastic, 72 tags, 6x12 mm	060.72

087.02.2



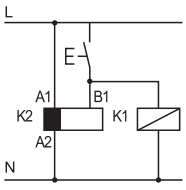
Potentiometer usable as external potentiometer for type 83.02 10 kΩ / 0.25 W linear	087.02.2



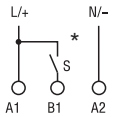
Functions

LED*	Supply voltage	NO output contact	Contacts	
			Open	Closed
	OFF	Open	15 - 18 25 - 28	15 - 16 25 - 26
	ON	Open	15 - 18 25 - 28	15 - 16 25 - 26
	ON	Open (Timing in Progress)	15 - 18 25 - 28	15 - 16 25 - 26
	ON	Closed	15 - 16 25 - 26	15 - 18 25 - 28

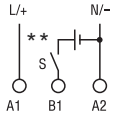
* The LED on type 83.62 is illuminated when supply voltage is supplied to timer.



• Possible to control an external load, such as another relay coil or timer, connected to the control signal terminal B1.



* With DC supply, positive polarity has to be connected to B1 terminal (according to EN 60204-1).



** A voltage other than the supply voltage can be applied to the control signal (B1), example:
A1 - A2 = 230 V AC
B1 - A2 = 12 V DC

Functions

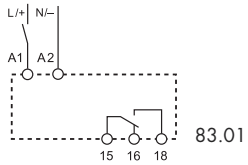
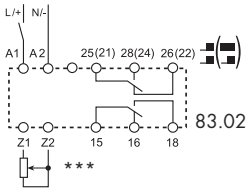
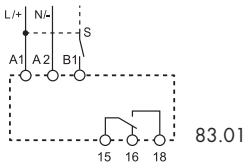
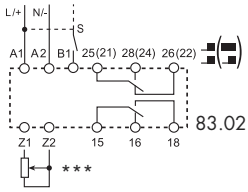
Multi-function
without control signal





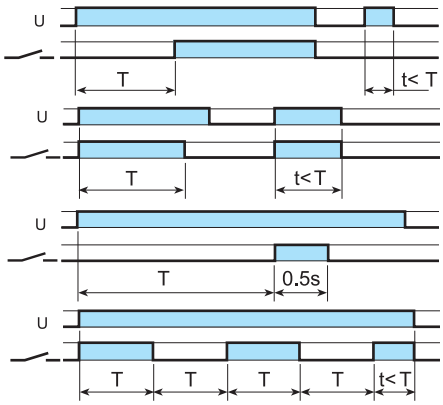
with control signal





*** Type 83.02: regulated using an external potentiometer (10 kΩ - 0.25 W).

Type
83.01
83.02

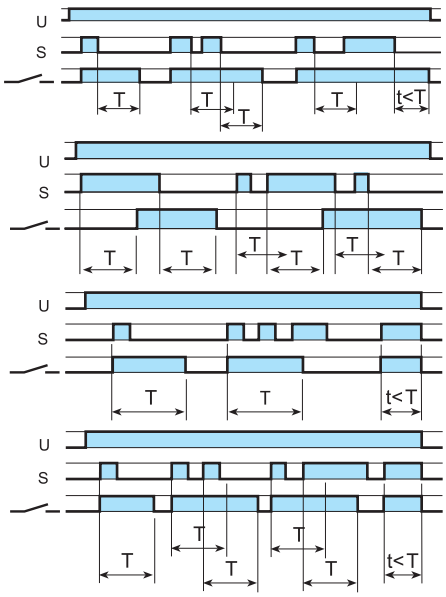


(AI) On-delay.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.

(DI) Interval.
Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

(GI) Pulse delayed.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs after a fixed time of 0.5s.

(SW) Symmetrical flasher (starting pulse on).
Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).



(BE) Off-delay with control signal.
Power is permenently applied to the timer. The output contacts transfer immediately on closure of the control signal (S). Opening the control signal initiates the preset delay, after which time the output contacts reset.

(CE) On- and off-delay with control signal.
Power is permenently applied to the timer.
Closing the control signal (S) initiates the preset delay, after which time the output contacts transfer. Opening the control signal initiates the same preset delay, after which time the output contacts reset.

(DE) Interval with control signal on.
Power is permenently applied to the timer.
On momentary or maintained closure of control signal (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.

(WD) Watchdog (Retriggerable interval with control signal on).
Power is permanently applied to the timer.
On momentary or maintained closure of control signal (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset; subsequent closures of control signal during the delay will extend the time. If the closure of the control signal (S) is longer than the preset time (T) then the output contacts reset.

NOTE: The timing function must be set when the timer is de-energised. Or for the 83.02, when the contact mode selector is in the OFF position.

83.02 type

Contact mode selector	Functions without control signal (example: AI)	Functions with control signal (example: BE)
2 timed contacts	 Both output contacts (15-18 and 25-28) follow the timing function	 Both output contacts (15-18 and 25-28) follow the timing function
OFF	 Both output contacts [15-18 and 25(21)-28(24)] stay permanently open	 Both output contacts [15-18 and 25(21)-28(24)] stay permanently open
1 timed + 1 instantaneous contact	 The output contact 15-18 follows the timing function The output contact 21-24 follows the power supply (U)	 The output contact 15-18 follows the timing function The output contact 21-24 follows the control signal (S)

Type		
83.11		**(AI) On-delay.** Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.
83.21		**(DI) Interval.** Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.
83.62		**(BI) Power off-delay (True off-delay).** Apply power to timer (minimum 500 ms). Output contacts transfer immediately. Removal of power initiates the preset delay, after which time the output contacts reset.
83.82		**(SD) Star-delta.** Apply power to timer. The star contact (⅄) closes immediately. After preset delay has elapsed the star contact (⅄) resets. After a further time (settable from 0.05s to 1s) the delta contact (Δ) closes and remains in that position, until reset on power off.
83.41		**(BE) Off-delay with control signal.** Power is permenently applied to the timer. The output contacts transfer immediately on closure of the control signal (S). Opening the control signal initiates the preset delay, after which time the output contacts reset.
83.91		**(LI) Asymmetrical flasher (starting pulse on)- (Z1-Z2 open).** Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ON and OFF times are independently adjustable.
		**(PI) Asymmetrical flasher (starting pulse off) - (Z1-Z2 linked).** Apply power to timer. Output contacts transfer after time T1 has elapsed and cycle between OFF and ON for as long as power is applied. The ON and OFF times are independently adjustable.
		**(LE) Asymmetrical flasher (starting pulse on) with control signal - (Z1-Z2 open).** Power is permenently applied to the timer. Closing control signal (S) causes the output contacts to transfer immediately and cycle between ON and OFF, until opened.
		**(PE) Asymmetrical flasher (starting pulse off) with control signal - (Z1-Z2 linked).** Power is permenently applied to the timer. Closing the control signal (S) initiates delay T1 after which the output contacts transfer and continue to cycle between OFF and ON, until the control signal is opened.

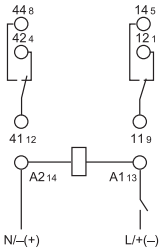
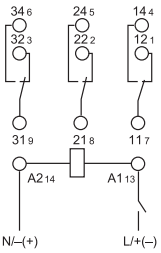
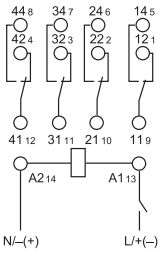
Type: 85.02, 85.03, 85.04



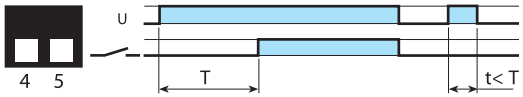
85.02



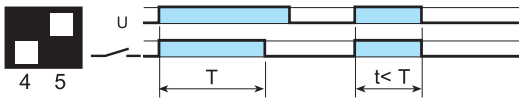
85.03



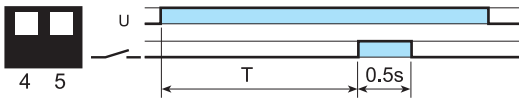
85.04



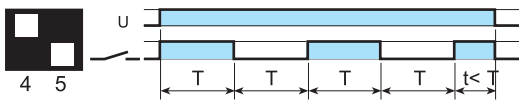
(AI) On-delay.
Apply power to timer.
Output contacts transfer after preset time has elapsed.
Reset occurs when power is removed.



(DI) Interval.
Apply power to timer.
Output contacts transfer immediately.
After the preset time has elapsed, contacts reset.



(GI) Pulse delayed.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs after a fixed time of 0.5s.



(SW) Symmetrical flasher (starting pulse on).
Apply power to timer.
Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied.
The ratio is 1:1 (time on = time off).

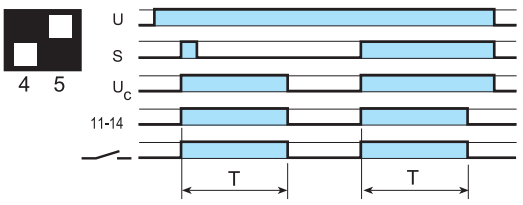
U = Supply voltage

S = Signal switch

U_C = Supply voltage to the timer

11-14 = Self-holding contact

= Output contact



Signal ON Pulse
On mometary closure of Signal Switch (S) > 50 ms, the output contacts transfer and remain so (with self-holding on contact 11-14) for the duration of the preset delay, after which they reset.

Features

Timer modules for use in conjunction with relay & socket.

86.00 - Multi-function & multi-voltage timer module
86.30 - Bi-function & multi-voltage timer module

- Timer module type 86.00 for 90, 92, 96 series sockets and type 86.30 for 90, 92, 94, 95, 96, 97 series sockets
- Wide supply voltage range: 12...240 V AC/DC (86.00) 12...24 V AC/DC or 230...240 V AC (86.30)
- LED indicator

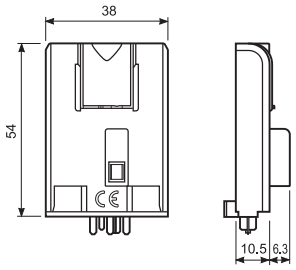
86.00

- Time scale: from 0.05s to 100h
- Multi-function
- Plug-in for use with 90.02, 90.03, 92.03 and 96.04 sockets

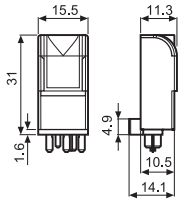
86.30

- Time scale: from 0.05s to 100h
- Bi-function
- Plug-in for use with 90.02, 90.03, 92.03, 94.02, 94.03, 94.04, 95.03, 95.05, 95.55, 96.02 96.04, 97.01, 97.02, 97.51 and 97.52 sockets

86.00



86.30



AI: On-delay
DI: Interval
SW: Symmetrical flasher (starting pulse on)
BE: Off-delay with control signal
CE: On- and off-delay with control signal
DE: Interval with control signal on
EE: Interval with control signal off
FE: Interval with control signal on and off

Ordering information

Example: 86 series multi-function timer module, (12...240)V AC/DC supply voltage.

8 6 . 0 0 . 0 . 2 4 0 . 0 0 0 0

Series

Type
0 = Multi-function (AI, DI, SW, BE, CE, DE, EE, FE)
3 = Bi-function (AI, DI)

No. of poles
See 40, 44, 46, 55, 56, 60 and 62 series relays
Poles for chosen relay/socket combination - according to chart below

Supply voltage
024 = (12...24)V AC/DC (86.30 only)
120 = (110...125)V AC (86.30 only)
240 = (12...240)V AC/DC (86.00 only)
240 = (230...240)V AC (86.30 only)

Supply version
0 = AC (50/60 Hz)/DC
8 = AC (50/60 Hz)

Combinations

Number of poles	Relay type	Socket type	Timer module
1	40.31	95.03	86.30
1	40.61	95.05	86.30
1	46.61	97.01/97.51	86.30

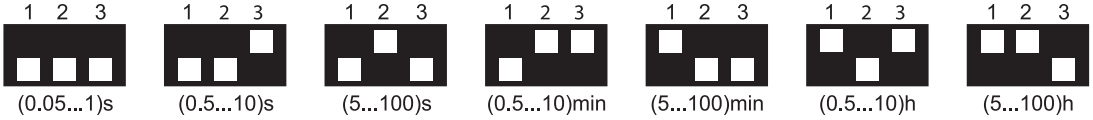
Current absorption on signal control (B1)	mA	1	—	
Power lost to the environment	without contact current W	0.1 (12 V) - 1 (230 V)	0.2	
	with rated current	See 56, 60 and 62 series relays	See 40, 44, 46, 55, 56, 60, 62 series relays	

Time scales



NOTE: Time scales and functions must be set before energising the timer.
To achieve the minimum time setting of 0.05 seconds it is necessary to use one of the functions with control signal.
When setting very short times it may be necessary to take into account the operate time of the relay used.

Functions

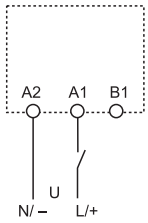
U = Supply voltage
S = Signal switch
= Output contact

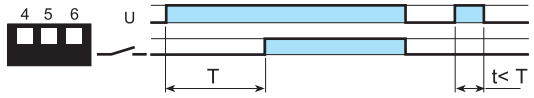
LED Type 86.00	LED Type 86.30	Supply voltage	NO output contact
		OFF	Open
		ON	Open
		ON	Open (timing in progress)
		ON	Closed

Without control signal = Start via contact in supply line (A1).
With control signal = Start via contact into control terminal (B1).

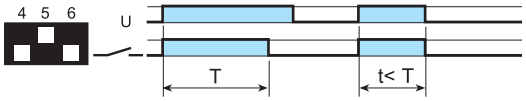
Wiring diagram — Type 86.00

Without control signal

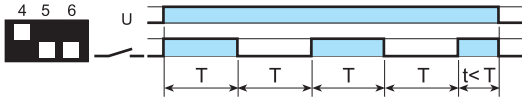




(AI) On-delay.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.

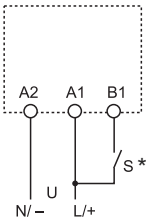


(DI) Interval.
Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

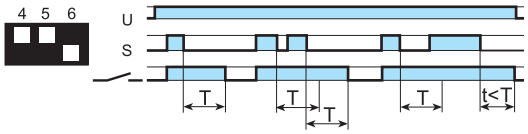


(SW) Symmetrical flasher (starting pulse on).
Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).

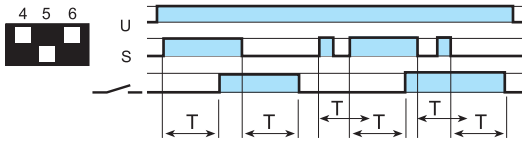
With control signal



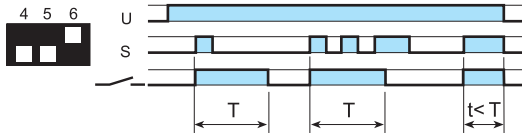
* With DC supply, positive polarity has to be conneted to B1 terminal (according to EN 60204-1). Switch S should be exclusively used to provide the control signal to terminal B1. (Do not connect any other load at this point).



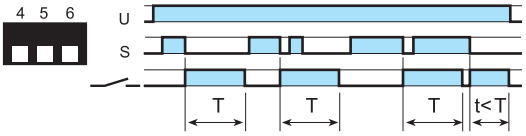
(BE) Off-delay with control signal.
Power is permenently applied to the timer.
The output contacts transfer immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which time the output contacts reset.



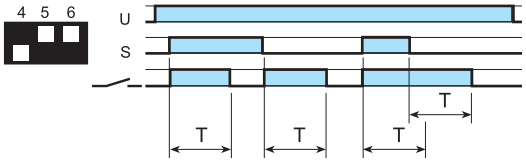
(CE) On- and off-delay with control signal.
Power is permenently applied to the timer.
Closing the Signal Switch (S) initiates the preset delay, after which time the output contacts transfer. Opening the Signal switch initiates the same preset delay, after which time the output contacts reset.



(DE) Interval with control signal on.
Power is permenently applied to the timer.
On momentary or maintained closure of Signal Switch (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.

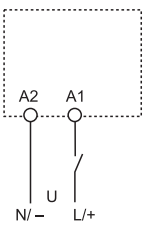


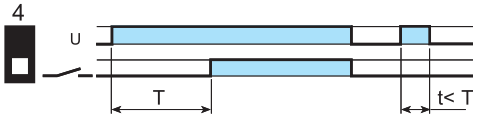
(EE) Interval with control signal off.
Power is permenently applied to the timer.
On opening of the Signal Switch (S) the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.



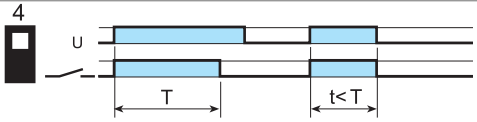
(FE) Interval with control signal on and off.
Power is permenently applied to the timer.
Both the opening and closing of the Signal Switch (S) initiates the transfer of the output contacts. In both instances the contacts reset after the delay period has elapsed.

Wiring diagram — Type 86.30





(AI) On-delay.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.



(DI) Interval.
Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

Other data					
Signal control (B1)					
	- current absorption		1 mA		
	- max cable length (capacity of ≤ 10 nF / 100 m)		250 m		
	- when applying a control signal to B1, which is different from the supply voltage at A1/A2		B1 is isolated from A1 and A2 by an opto-coupler, and can therefore be operated at a voltage other than the supply voltage		
Note: when applying a control signal to B1 it is recommended to attach a bypass resistance 56 kOhm/2 W across B1 - A2			If using a control signal of between (24... 48)V DC and a supply voltage of (24...240)V AC; ensure that the signal – is connected to A2 and the + is applied to B1, and that L is applied to B1 and N to A2		
External potentiometer for 87.02			Use a 10 kΩ/ ≥ 0,25 W linear potentiometer. Maximum cable length 10 m. When using an external potentiometer, remove the bridge between Z1 and Z2, and set the timer'spotentiometer to its minimum setting. Consider the voltage potential at the potentiometer to be the same as the timer supply voltage.		
Power lost to the environment			**87.01/02/11/21/31/41/91**	**87.61/62**	**87.82**

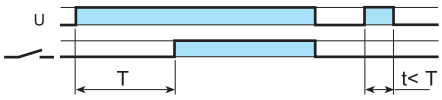
* A voltage other than the supply voltage can be applied to the command START (B1).
Example:
A1 - A2 = 230 V AC
B1 - A2 = 24 V AC

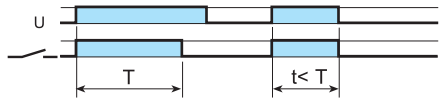
** Type 87.02: regulated using an external potentiometer (10 kΩ - 0.25 W).

NB.: remove link between Z1-Z2 and position the Timer potentiometer on "zero".

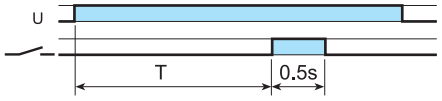
Type
87.01
87.02



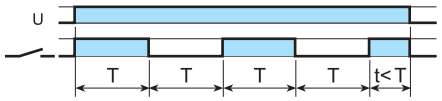
(AI) On-delay.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.



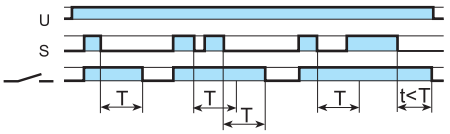
(DI) Interval.
Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.



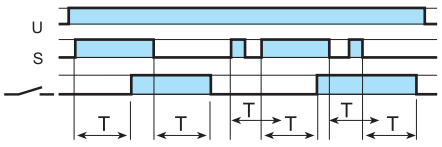
(GI) Pulse delayed.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs after a fixed time of 0.5s.



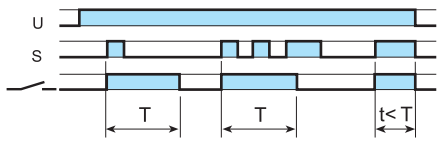
(SW) Symmetrical flasher (starting pulse on).
Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).



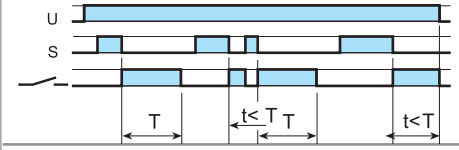
(BE) Off-delay with control signal.
Power is permenently applied to the timer. The output contacts transfer immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which time the output contacts reset.



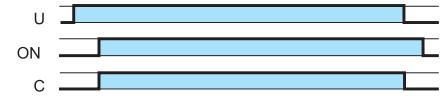
(CE) On- and off-delay with control signal.
Power is permenently applied to the timer.
Closing the Signal Switch (S) initiates the preset delay, after which time the output contacts transfer. Opening the Signal switch initiates the same preset delay, after which time the output contacts reset.



(DE) Interval with control signal on.
Power is permenently applied to the timer.
On momentary or maintained closure of Signal Switch (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.



(EE a) Interval with control signal off.
Power is permenently applied to the timer.
On opening of the Signal Switch (S) the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.



Permanently ON.
Selecting the function ON when power is applied to the relay the first contact transfers immediately and remains in that position.

Permanently OFF.
The contact returns to the original position when the OFF function is selected.

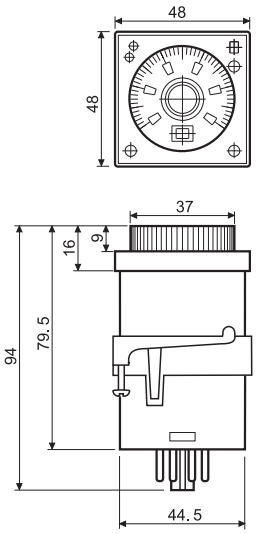
Type		
87.11		**(AI) On-delay.** Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.
87.21		**(DI) Interval.** Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.
87.31		**(SW) Symmetrical flasher (starting pulse on).** Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).
87.61 87.62		**(BI) Power off-delay (True off-delay).** Apply power to timer (minimum 300 ms). Output contacts transfer immediately. Removal of power initiates the preset delay, after which time the output contacts reset.
87.82		**(SD) Star-delta.** Apply power to timer. The star contact (⅄) closes immediately. After preset delay has elapsed the star contact (⅄) resets. After a further fixed time of ~60 ms the delta contact (Δ) closes and remains in that position, until reset on power off.
87.41		**(BE) Off-delay with control signal.** Power is permenently applied to the timer. The output contacts transfer immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which time the output contacts reset.
87.91 switch position		**(LI) Asymmetrical flasher (starting pulse on).** Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ON and OFF times are independently adjustable.
switch position		**(PI) Asymmetrical flasher (starting pulse off).** Apply power to timer. Output contacts transfer after time T1 has elapsed and cycle between OFF and ON for as long as power is applied. The ON and OFF times are independently adjustable.
switch position		**(LE) Asymmetrical flasher (starting pulse on) with control signal.** Power is permenently applied to the timer. Closing Signal Switch (S) causes the output contacts to transfer immediately and cycle between ON and OFF, until opened.
switch position		**(PE) Asymmetrical flasher (starting pulse off) with control signal.** Power is permenently applied to the timer. Closing the Signal Switch (S) initiates delay T1 after which the output contacts transfer and continue to cycle between OFF and ON, until the Signal Switch is opened.

Features

Multi-voltage and multi-function timer range
Front panel or socket mount

- 8 - 11 pin plug-in version available
- Time scales from 0.05s to 100h
- "1 delayed contact +1 instantaneous contact" version available (type 88.12)
- Front panel mounting fixing included
- 90 series sockets

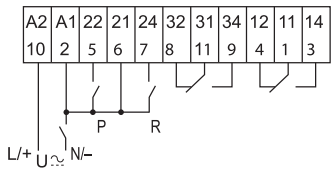


88.02

- Multi-function
- 11 pin
- Plug-in for use with 90 series sockets

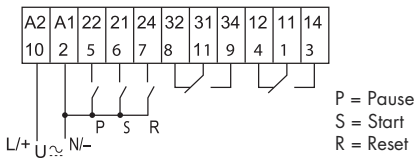
AI: On-delay
DI: Interval
GI: Pulse delayed
SW: Symmetrical flasher (starting pulse on)

without control signal



BE: Off-delay with control signal
CE: On- and off-delay with control signal
DE: Interval with control signal on

with control signal



88.12

- Multi-function
- 8 pin, 2 timed contacts or 1 timed + 1 instantaneous contact
- Plug-in for use with 90 series sockets

AI a: On-delay (2 timed contacts)
AI b: On-delay (1 timed + 1 instantaneous contact)
DI a: Interval (2 timed contacts)
DI b: Interval (1 timed + 1 instantaneous contact)

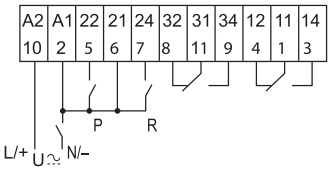
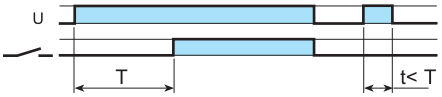
Wiring diagram

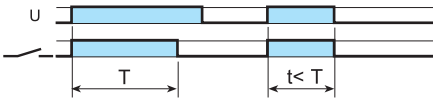
Type 88.02

without control signal

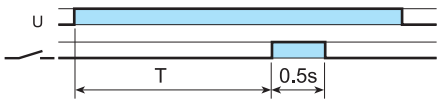




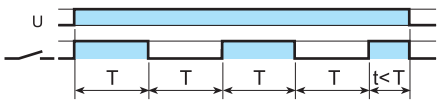
(AI) On-delay.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.



(DI) Interval.
Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

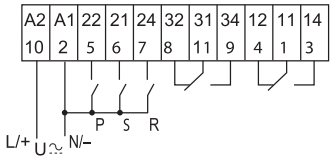


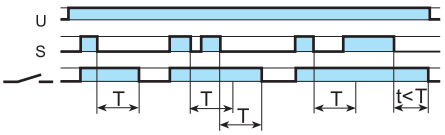
(GI) Pulse delayed.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs after a fixed time of 0.5s.



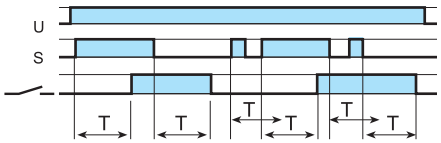
(SW) Symmetrical flasher (starting pulse on).
Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).

with control signal

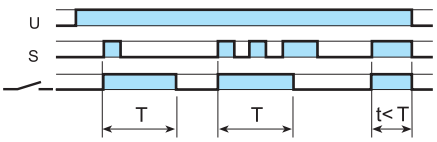




(BE) Off-delay with control signal.
Power is permenently applied to the timer.
The output contacts transfer immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which time the output contacts reset.



(CE) On- and off-delay with control signal.
Power is permenently applied to the timer.
Closing the Signal Switch (S) initiates the preset delay, after which time the output contacts transfer. Opening the Signal switch initiates the same preset delay, after which time the output contacts reset.



(DE) Interval with control signal on.
Power is permenently applied to the timer.
On momentary or maintained closure of Signal Switch (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.

RESET (R)
A momentary closure of the reset switch (2-7) will reset the timer. Longer term closure of the reset switch will hold the timer in the reset state. This is applicable for all functions.

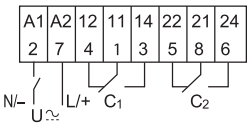
PAUSE (P)
Closure of the pause switch (2-5) will immediately halt the timing process, but the elapsed time will be retained, and the current state of the output contacts will be maintained.
On opening of the pause switch, timing resumes from the retained value. This is applicable for all functions.

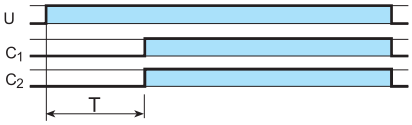
Functions

Wiring diagram

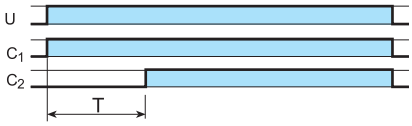
Type 88.12

without control signal

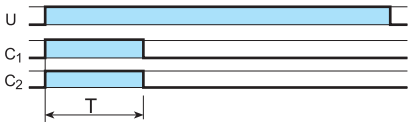




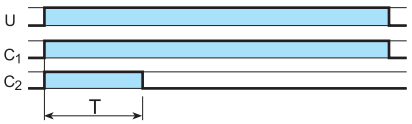
(AI a) On-delay (2 timed contacts).
Apply power to timer.
Contacts (C_1 and C_2) transfer after preset time has elasped. Reset occurs when power is removed.



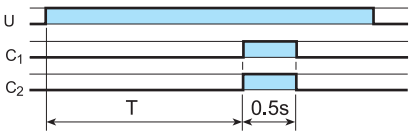
(AI b) On-delay
(1 timed contact + 1 instantaneous contact).
Apply power to timer. Output contact (C_1) transfers immediately. Contact (C_2) transfers after the preset time has elasped. Reset occurs when power is removed.



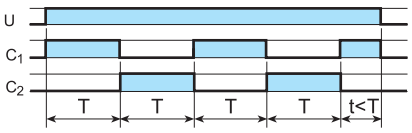
(DI a) Interval (2 timed contacts).
Apply power to timer.
Output contacts (C_1 and C_2) transfer immediately.
After preset time has elasped, the contacts reset.



(DI b) Interval (1 timed contact + 1 instantaneous contact).
Apply powert to timer. Output contacts (C_1 and C_2) transfer immediately. After preset time has elasped, the contact (C_2) resets. Contact (C_1) resets when power is removed.



(GI) Pulse delayed.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs after a fixed time of 0.5s.



(SW) Symmetrical flasher (starting pulse on).
Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).

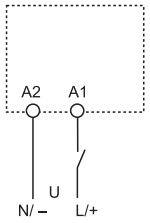
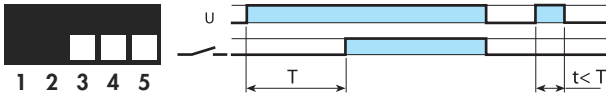
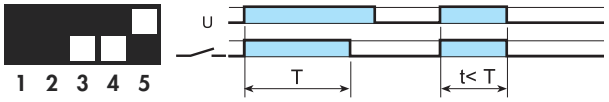
Wiring diagram

U = Supply voltage **S** = Signal switch = Output contact

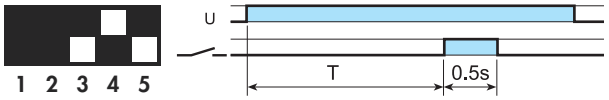




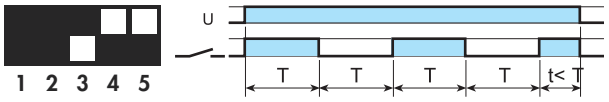
(AI) On-delay
Apply power to timer.
Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.



(DI) Interval
Apply power to timer.
Output contacts transfer immediately.
After the preset time has elapsed, contacts reset.

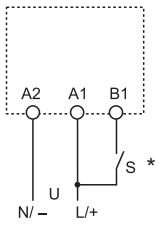


(GI) Pulse (0.5s) delayed
Apply power to timer.
Output contacts transfer after preset time has elapsed.
Reset occurs after a fixed time of 0.5s.

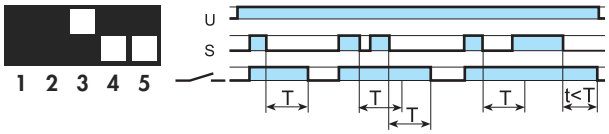


(SW) Symmetrical flasher (starting pulse on)
Apply power to timer.
Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied.
The ratio is 1:1 (time on = time off).

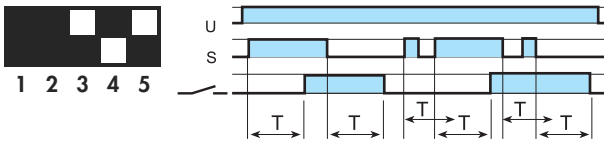
With control signal



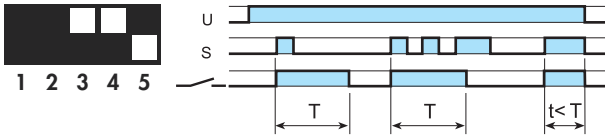
* With DC supply, positive polarity has to be conneted to B1 terminal (according to EN 60204-1).



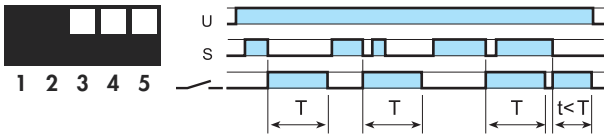
(BE) Off-delay with control signal
Power is permenently applied to the timer. The output contacts transfer immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which time the output contacts reset.



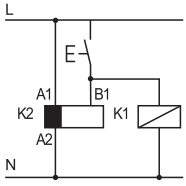
(CE) On- and off-delay with control signal
Power is permenently applied to the timer. Closing the Signal Switch (S) initiates the preset delay, after which time the output contacts transfer. Opening the Signal switch initiates the same preset delay, after which time the output contacts reset.



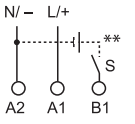
(DE) Interval with control signal on
Power is permenently applied to the timer. On momentary or maintained closure of Signal Switch (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.



(EE) Interval with control signal off
Power is permenently applied to the timer. On opening of the Signal Switch (S) the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.



- Possible to control an external load, such as another relay coil or timer, connected to the control signal terminal B1.



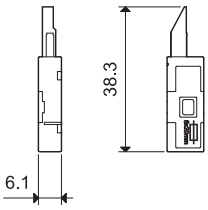
** A voltage other than the supply voltage can be applied to the command Start (B1), example:
A1 - A2 = 24 V AC
B1 - A2 = 12 V DC

Accessories

093.63

Output fuse module	093.63

- Patent-pending solution for easy load protection
- For 5 x 20 mm fuses up to 6 A, 250 V
- Easy visibility of the fuse condition through the window
- Quick connection to socket

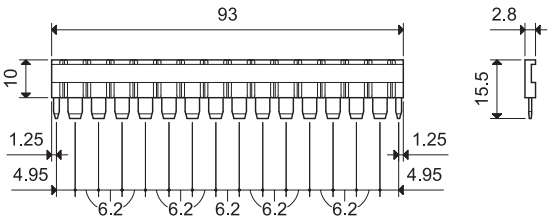


093.16

093.16.0

093.16.1

16-way jumper link	093.16 (blue)	093.16.0 (black)	093.16.1 (red)
Rated values	36 A - 250 V		
Possibility of multiple connection, side by side			

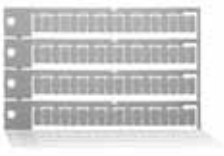


093.60

Dual-purpose plastic separator (1.8 mm or 6.2 mm separation)	093.60

1. By breaking off the protruding ribs (by hand), the separator becomes only 1.8 mm thick; useful for the visual separation of different groups of interfaces, or necessary for the protective separation of different voltages of neighbouring interfaces, or for the protection of cut ends of jumper links.

2. Leaving the ribs in place provides 6.2mm separation. Simply cutting (with scissors) the relevant segment(s) permits the interconnection across the separator of 2 different groups of interface relays, using the standard jumper link.



060.72

Sheet of marker tags, plastic, 72 tags, 6x12 mm	060.72

Features

Relays for automatic control of lighting according to the ambient light level

Integral light sensor

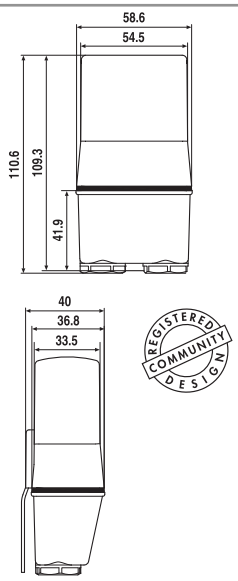
For pole or wall mounting

10.32 - 2 NO 16A output contacts
10.41 - 1 NO 16A output contact

- Double pole Live and Neutral switching possible with the 10.32
- Sensitivity adjustment from 1 to 80 lux
- Cadmium free contact material
- Cadmium free light sensor (IC photo diode)
- Electronic circuit - transformer isolated
- Italian Patent "light feedback compensation" innovative principle
  Compatible with slow starting gas discharge lamps (up to 10 minutes)
- For the first 3 working cycles the delay time (On and Off) is reduced to zero in order to aid installation
- Available for supply 230 and 120 V AC (50/60 Hz)

10.32

- Double pole switching - 2 NO 16A for Live and Neutral switching



10.41

- Single pole switching - 1 NO 16A for Live switching

Approvals (according to type)					

Features

Relays for automatic control of lighting according to the ambient light level

Integral light sensor

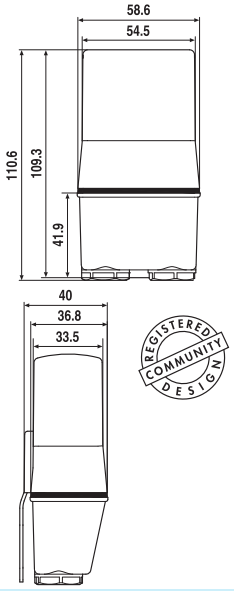
For pole or wall mounting

10.42 - Two independent 16A outputs with individual lux setting
10.51 - Miniature single 12A NO output
10.61 - Mounting on street light body

- Sensitivity adjustment from 1 to 80 lux
- Fixed sensivity 10 lux (± 20%) - (10.61 type)
- Cadmium free contact material
- Cadmium free light sensor (IC photo diode)
- Electronic circuit - transformer isolated (10.42 type)
- Italian Patent "light feedback compensation" innovative principle (10.51 type)
- For the first 3 working cycles the delay time (On and Off) is reduced to zero in order to aid installation
- Available for supply 230 and 120 V AC (50/60 Hz)
- Prewired with silicone wire, 500 mm length (10.61 type)

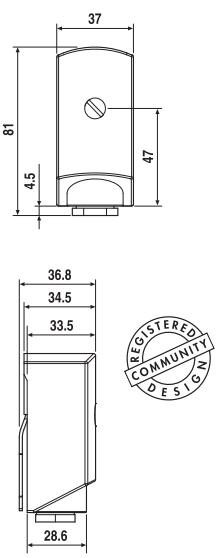
10.42

- Two independent outputs - 2 NO 16A



10.51

- Single pole switching - 1 NO 12A
- Miniature size



NEW 10.61

- Single pole switching - 1 NO 16 A

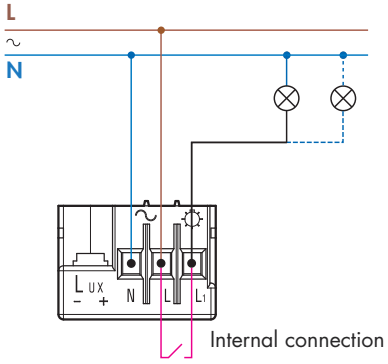
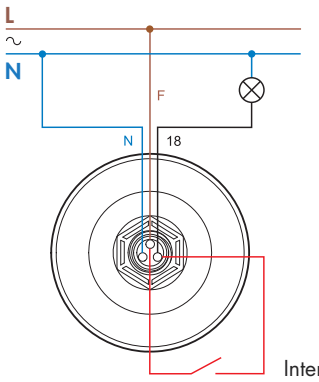
Type 10.42



Type 10.51

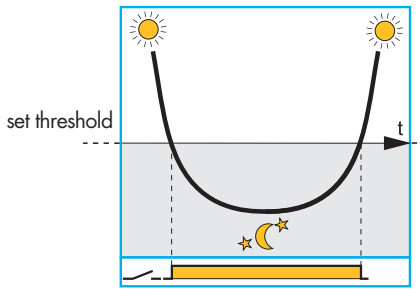


Type 10.61

V1-2012, www.findernet.com

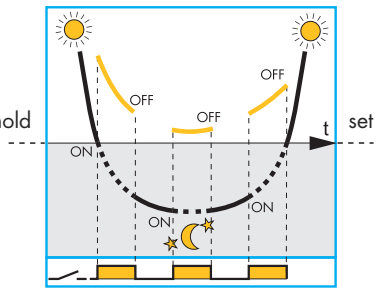
Advantage of the "light feedback compensation" principle

Light dependent relay where the lighting being controlled does not influence the light level seen by the light sensor



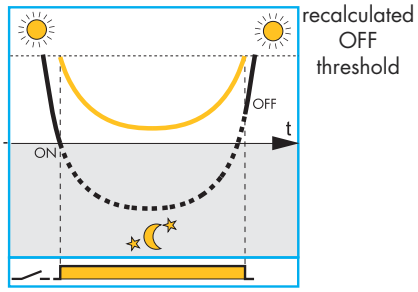
Correct functioning - provided the sensor can be shielded from the effects of the controlled lighting switching On and Off

Traditional light dependent relay where the lighting being controlled influences the light level seen by the light sensor



Incorrect functioning where the lamps cycle between On and Off, because their effect is being detected by the light sensor

Type 10.32, 10.41 and 10.51 light dependent relay with "light feedback compensation"



The innovative principle of "light feedback compensation" avoids the annoying and damaging effects of the lamps repeatedly "hunting" between On and Off, due to poor installation

Ambient light level as measured by the light dependent relay's integral light sensor.

Ambient light + controlled light level as measured by the light dependent relay's integral light sensor.

Notes

1. It is good practice to try to achieve a correct installation where the light emitted from the lamp(s) does not influence the light level seen by the sensor, although the "light feedback compensation" principle will help when this is not fully achievable. In this case it should be appreciated that the "light feedback compensation" principle may delay slightly the time of Switch Off - beyond the ideal.
2. The compensation principle is not effective where the combined effect of the ambient light and the controlled lighting exceeds 120 lux.
3. The 10.32 and 10.41 types are compatible with gas discharge lamps that attain full output within 10 minutes, since the electronic circuit monitors lamps' light output over a 10 minutes period to achieve a true assessment of its contribution to the overall lighting level.

Features

Relays for automatic control of lighting according to ambient light level - with separate light sensor

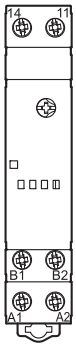
11.31 - 1 NO 16 A output contact
- Sensitivity adjustment from 1 to 100 lux
- One module, 17.5mm wide
- Low energy consumption
- 24 V DC/AC supply version available

11.41 - 1 CO 16 A output contact
- European patent "Zero hysteresis" for energy saving;
- Italian patent "Light feedback compensation" principle
- Selector with 4 positions:
  - Standard range (threshold setting 1...80 lx)
  - High range (threshold setting 30...1000 lx)
  - continuous light (helpful during installation and initial testing and for maintenance purposes)
  - light off (useful for vacations)

- For the first 3 working cycles the delay time (On and Off) is reduced to zero in order to aid installation
- LED status indication
- SELV separation between contact and supply circuit
- Double insulation between supply and light sensor
- 35 mm rail (EN 60715) mount
- Cadmium free contact material
- Cadmium free light sensor (IC photo diode)

NEW 11.31

- 1 pole
- 17.5 mm wide



NEW 11.41

- 1 pole
- "zero hysteresis"
- 4 position selector

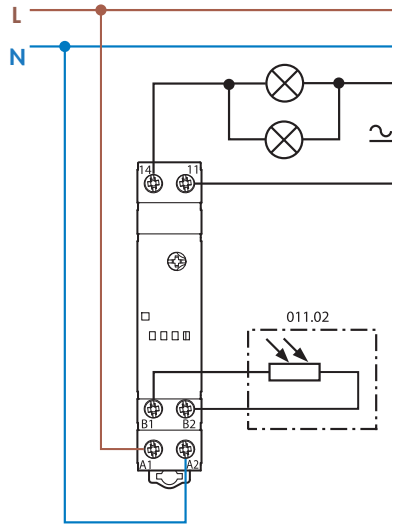
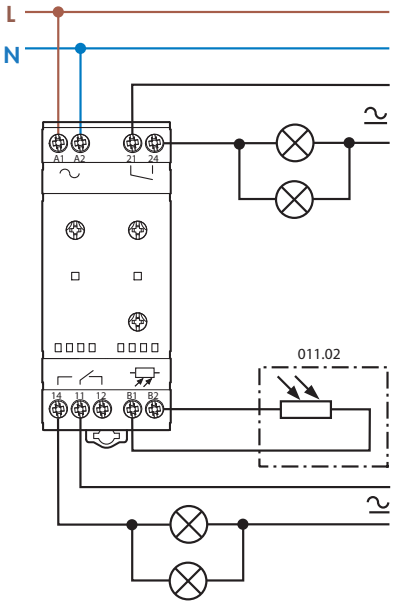
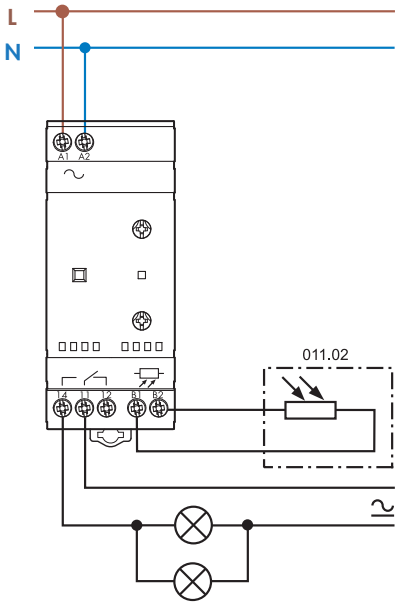
Type 11.31



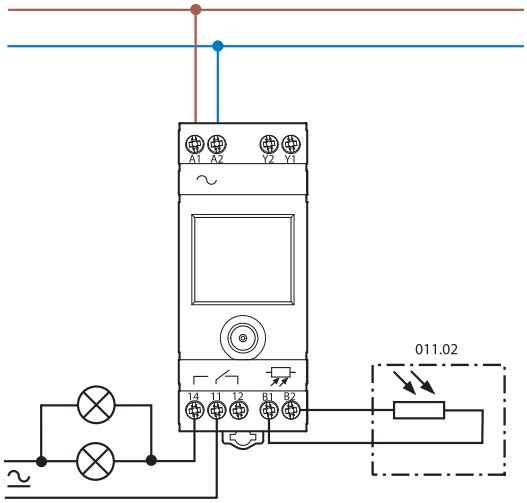
Type 11.42



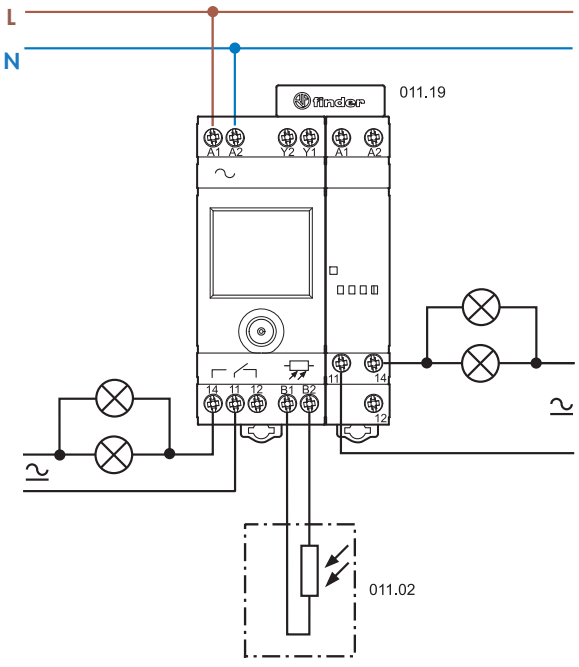
Type 11.41



Type 11.91



Type 11.91 + 19.91

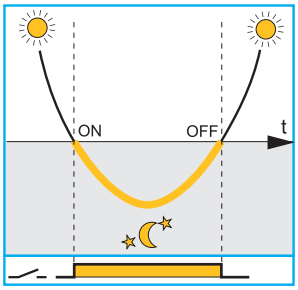


VI-2012, www.findernet.com

Advantage of the "Zero hysteresis" patented circuit:

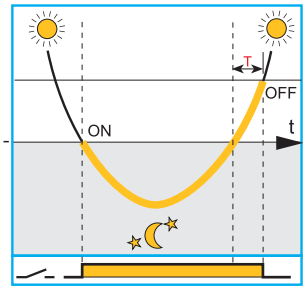
ensures reliable switching without wasting energy

TYPE 11.41 "ZERO HYSTERESIS" LIGHT DEPENDENT RELAYS



Switch OFF level = Switch ON level. Patented "Zero Hyseresis" circuitry ensures reliable switching without wasting energy.

TRADITIONAL LIGHT DEPENDENT RELAYS



"Traditional" light dependent relays incorporate switching hysteresis to prevent malfunctioning or tripping. This results in an unnecessary delay in switching off, and a resulting waste of energy (over period T).

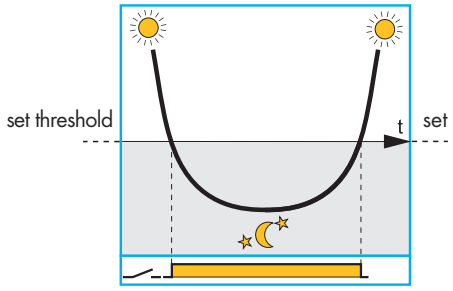
Brightness of the natural light

The NO of the light dependent relay is closed (light is switched on)

Advantage of the "light feedback compensation" principle:

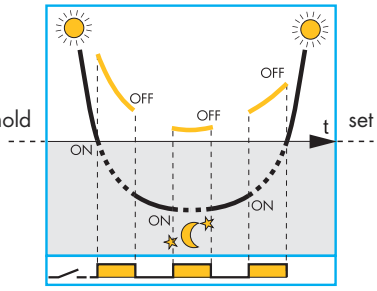
avoids the effect of the lamps repeatedly "hunting" between On and Off, due to poor installation

Light dependent relay where the lighting being controlled does not influence the light level seen by the light sensor



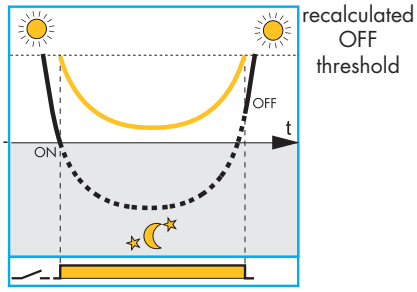
Correct functioning - provided the light sensor can be shielded from the effects of the controlled lighting switching On and Off

Traditional light dependent relay where the lighting being controlled influences the light level seen by the light sensor



Incorrect functioning where the lamps cycle between On and Off, because their effect is being detected by the light sensor

Type 11.41 and 11.91 light dependent relay with "light feedback compensation"



The innovative principle of "light feedback compensation" avoids the annoying and damaging effects of the lamps repeatedly "hunting" between On and Off, due to poor installation

Ambient light level as measured by the light dependent relay's light sensor.

Ambient light + controlled light level as measured by the light dependent relay's light sensor.

Notes

1. It is good practice to try to achieve a correct installation where the light emitted from the lamp(s) does not influence the light level seen by the light sensor, although the "light feedback compensation" principle will help when this is not fully achievable. In this case it should be appreciated that the "light feedback compensation" principle may delay slightly the time of Switch Off - beyond the ideal.
2. The compensation principle is not effective where the combined effect of the ambient light and the controlled lighting exceeds a maximum value (200 lux for the 11.91, 160/2,000 lux for standard/high range of the 11.41).
3. The 11.41 and 11.91 types are compatible with gas discharge lamps that attain full output within 10 minutes, since the electronic circuit monitors lamps' light output over a 10 minute period to achieve a true assessment of its contribution to the overall lighting level.

Functions 11.91

	Switch-OFF time	Switch-ON time		Application examples
11 14	NO	NO		Working as a standard light-dependent relay
	YES	NO	OFF	Working where lighting is not required from 10 PM onwards
	YES	YES	OFF ON	Working where lighting is not required between 1 AM and 5 AM
AUX Y1 Y2				Additional output - light dependent without time switch intervention

All the functions and the values can be set through the front joystick and are displayed on the front LCD.

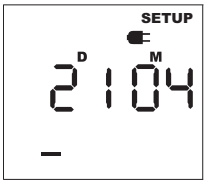
Display mode

During normal operation, with AC supply connected, the following is displayed:
- the current time
- the current lux level (upper bars)
- the set lux threshold (lower bars)
- the status (open/closed) of the 11-14 output contact
- the "moon" symbol (only if the current lux level is lower than the set threshold). It also indicates that the Auxiliary output is On, although the main output contact 11-14 may be On, depending on the chrono program.
- the "chrono" symbol (only if a switch-off time is enabled).

From **Display mode** it is possible to enter **Program mode** or **Set-up mode** with a short or long (> 2s) press respectively, to the joystick centre. From **Display mode** it is also possible to enter **Hand mode**, where (independently of the lux level and the Chrono program) the 11-14 output contact is forced into the On or Off position with a long (> 2s) press of the joystick upper or lower quadrants, respectively. The "hand" symbol is then displayed. A long press to the opposite quadrant will reset the hand mode.

Program mode

In this mode it is possible to set the lux threshold level, to enable and to set the switch-off time, to enable and to set the switch-on time. With a short press to the joystick right or left quadrant it is possible to progress from one program step to another (accepting the values set). At any program step it is possible to modify the set values with a short press to the joystick upper or lower quadrant. A long (> 1s) press allows the fast increment (or decrement) of values. A short press to the joystick centre will resume the display mode.



Set-up mode

In this mode it is possible to set the current year, month, day, hour and minute (in this order) and to enable european "Daylight saving".
With a short press to the joystick right or left quadrant it is possible to progress from one set-up step to another (accepting the values set); in any step it is possible to modify the set values with a short press to the joystick upper or lower quadrant. A long (> 1s) press allows the fast increment (or decrement) of values.
A short press to the joystick centre will resume the display mode.
Note: the product is supplied with central european time factory set and "Daylight saving" enabled.

Power-off mode

If the 230 V AC supply is not connected, the relay enters power-off mode and to ensure the long life of the built-in back-up battery only the clock is maintained active. The display turns off and no other operation (including light measurement) is performed.
With a press to the joystick during power-off mode it is possible to "awaken" the device and to enter program or set-up mode (the"electrical plug" symbol is displayed); after about 1 minute inactivity the power-off mode is resumed.
Note: with the supply not connected, the program or set-up modes absorb a higher current than the power-off mode, thus influencing the battery life.

V1-2012, www.findernet.com

Auxiliary output

A solid state output at terminals Y1-Y2 is provided (rated 12 V DC, 80 mA 1 W max.): this can be used with the power module **19.91.9.012.4000** connected by the dedicated **011.19** connector. Or, it is possible to connect a suitable relay (for example, 38-48-49-4C-58-59 interface module) provided the coil is within the rating, and the wiring does not exceed 40 cm length. The auxiliary output is driven exclusively by the light sensor of the device, and is consequently independent of the time switch. With the main contact, this permits a flexible lighting system controlled by the ambient light, both with and without the influence of the time switch function.

060.72

Sheet of marker tags, for types 11.31, 11.41, 11.42, 19.91, plastic, 72 tags, 6x12 mm | 060.72

019.01

Identification tag, for types 11.41 and 11.42, plastic, 1 tag, 17x25.5 mm | 019.01

Features

Mechanical time switches
- Daily time setting *
- Weekly time setting **

- **Type 12.01** - 1 Pole 16 A CO (SPDT) 35.8 mm width
- **Type 12.11** - 1 Pole 16 A NO (SPST-NO) 17.6 mm width
- **Type 12.31-0000** daily - 1 Pole 16 A CO (SPDT)
- **Type 12.31-0007** weekly - 1 Pole 16 A CO (SPDT)
- Minimum time interval setting: 1h (12.31-0007) 30 min (12.01) 15 min (12.11 - 12.31-0000)

* Same program every day

** Different program possible for each of the 7 days of the week

For outline drawing see page 10

Approvals (according to type)	CE EAC			

Features

12.51 - Digital (analogue-style) time switch, daily/weekly programming

- 30 minutes interval setting
- Easily configurable for daily or weekly programming

12.81 - Digital astro-switch

- Astro program: calculation of sunrise and sunset times through date, time and location coordinates
- Location coordinates easily settable for most European countries trough post codes
- Offset function: allows programming of switching times offset from the astronomical time (up to +– 90', with 10' steps)

- Summer/winter European time
- 1 CO 16 A output contact
- LCD status indication, set-up and programming
- Back-light display
- Internal battery for set-up and programming without supply, easily replaceable from the front
- Protective separation between supply and contacts
- 35 mm rail (EN 60715) mount
- Cadmium free contact material

Ordering information

Example: 12 series digital/analogue time switch, 1 CO 16 A contact, 230 V AC supply

1 2 . 5 1 . 8 . 2 3 0 . 0 0 0 0

Series

Type
0 = Daily, 35.8 mm wide
1 = Daily, 17.5 mm wide
3 = Daily or Weekly, 72x72 mm
5 = Digital/analogue time switch, 35 mm wide
2 = Weekly, 35.8 mm wide
7 = Weekly, 17.5 mm wide
8 = Astro-switch, 35 mm wide
9 = Weekly "Astro", 35.8 mm wide

No. of poles
1 = 1 CO (SPDT), 16 A
2 = 2 CO (DPDT), 16 A (type 12.22 and 12.92)

Supply version
0 = AC (50/60 Hz)/DC (types 12.21.0.012, 12.21.0.024, 12.22.0.024, 12.71.0.024)
8 = AC (50/60 Hz)

Supply voltage
012 = 12 V AC/DC
024 = 24 V AC/DC
120 = 120 V AC
230 = 230 V AC

Option
0 = With power back-up
1 = Without power back-up (type 12.11)

Special version
0 = Standard
9 = Programming via PC type 12.91.8.230.0090

Option
0 = Standard
0 = Daily only for 12.31
7 = Weekly only for 12.31

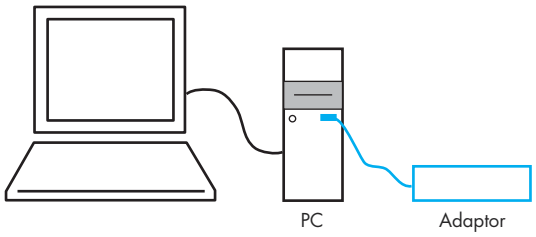
012.90

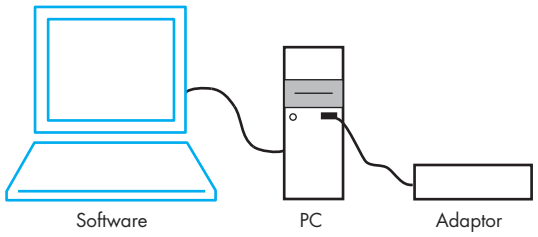
PC programming kit for type 12.71, 12.91.8.230.0090 | 012.90

This special PC programming kit, permits fast and easy programming of the Time Switch with a PC or Laptop.
The program transfer can be done by the special Key Memory (supplied with the 12.91.8.230.0090) or directly by the Time switch 12.71.
Contents: Programming adaptor, USB cable (1.8 meter length), Software.

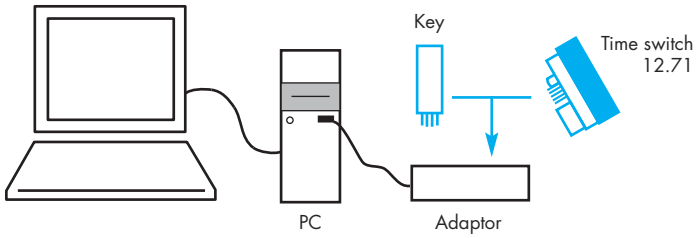
1. Connect adaptor



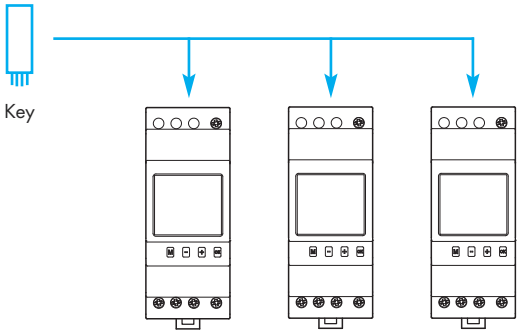
2. Start Software

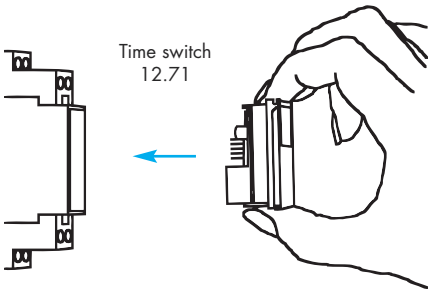


3. Connect time switch



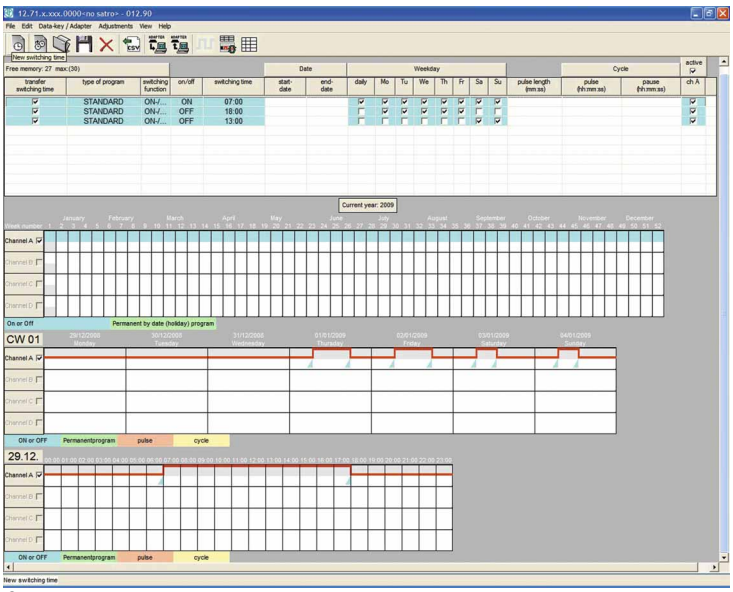
4. Transfer the Program

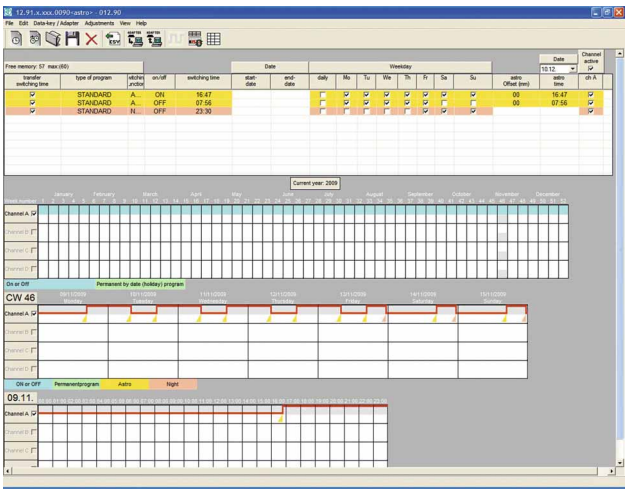




PC Programming software

Easy and intuitive software to create programs for the Time Switch, in a few fast steps. For Windows 2000/XP/Vista.





Battery replacement type 12.51 and 12.81

Accessories type 12.51 and 12.81

Functions type 12.51

All the functions and the values can be set through the front joystick and are displayed on the front LCD.

Display mode

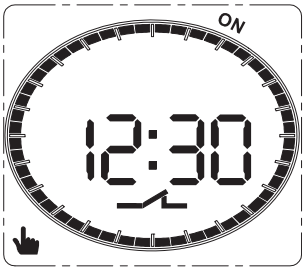
During normal operation, with AC supply connected, the following is displayed:

- the current time (hours and minutes)
- the status (ON/OFF and symbol of contact open/closed) of the 11-14 output contact
- the program for the current day (each solid segment represents an half-hour interval set to ON)

From **Display mode** it is possible to enter in **Program mode** or **Setup mode** respectively with a short or long (> 2") press to the joystick centre ◎.

Hand mode

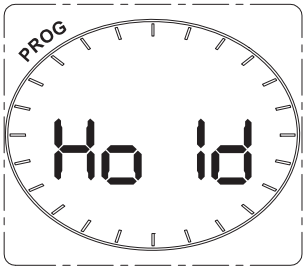
From **Display mode** it is also possible to enter in **Hand mode**, where (independently from the program) the 11-14 output contact is forced to the ON or OFF position with a long (> 2") press to the joystick ⊕ or ⊖ directions, respectively. The "hand" symbol is then displayed.
A long press in the opposite direction will exit the hand mode.



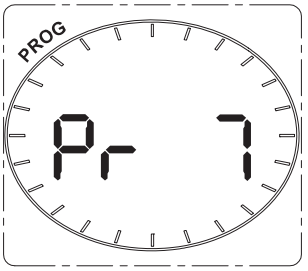
Setup mode

In this mode it is possible to set (in the following order):

- daily/weekly function
- current year
- current day
- current month
- current hour
- current minute
- enable/disable european summer time.

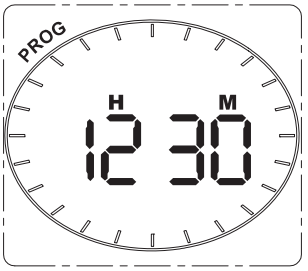


With a short press of the joystick → or ←, it is possible to pass from one setup step to another (confirming the set values); in any step it is possible to modify the set values with a short press to the joystick ⊕ or ⊖. A sustained (> 1") press results in the fast increasing (or decreasing) of values.



A short press to the joystick centre ◎ will restore the Display mode.

Note: the product is supplied factory set to Central Europe time with european summer time enabled.

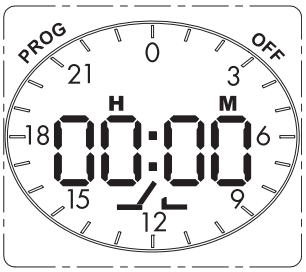


V1-2012, www.findernet.com

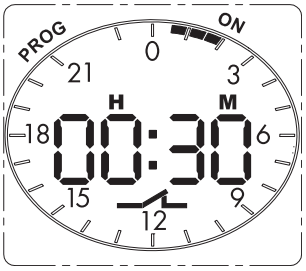
Functions type 12.51

Program mode (daily)

In this mode it is possible to set the "pattern" of time segments, which define the ON time of the 11-14 output contact. This "pattern" will be the same for all days of the week (daily).



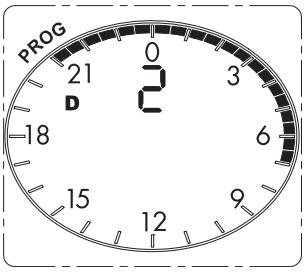
Entering Programming mode (from Display mode) with a short press to ◎ takes the digital time to 00:00 (and any previously programmed segment pattern is displayed). Stepping backwards ◀ or forwards ▶ in time displays the appropriate segment time and the appropriate open or closed contact status for that time segment.
At any step it is possible to change the segment status with a short press to the joystick ▲ (for ON) or ▼ (for OFF) as appropriate, and this also automatically advances the time to the next segment, and always in a clockwise direction. If the joystick is pressed several times in, say, the ▲ direction then each successive segment will assume the ON status. If it is then pressed several times in the ▼ direction then each successive segment will assume the OFF status. This allows the rapid setting of many consecutive segments with the same status.



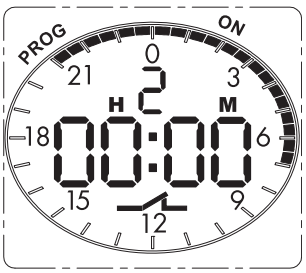
A short press to the joystick centre ◎ will restore the display to the Display mode.

Program mode (weekly)

In this mode it is possible to set a different "pattern" of time segments for each day of the week (weekly).



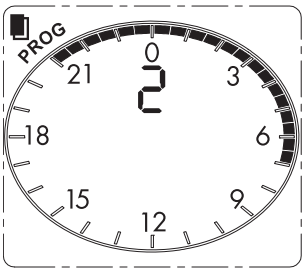
Entering Programming mode (from Display mode) with a short press to ◎ takes the display to the programming mode, for the current day. With a subsequent short press to ◀ or ▶ it is possible to pass from one day to another (Monday is day 1).
With the desired day selected it is possible to enter the programming mode for that day by pressing ▼.
Program the segments for that day by following the same procedure as described above for daily mode.
When all 48 segments have been set, accept with a short press to ◎. Then progress to the next day by pressing the joystick in the ◀ or ▶ direction. Repeat programming for the next day, and then repeat for other remaining days.



At any time return to the Display mode with a short press to the joystick centre ◎.

COPY FUNCTION

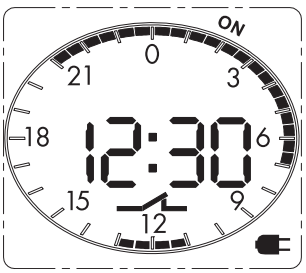
View the particular day to be copied (using ◀ or ▶ as described above) and copy with a short press to ▲ (the "copy icon" will then appear).
Then select another day, using ◀ or ▶, and paste the copied program with a short press to ▲.
This can be repeated for other days.



A short press to the joystick centre ◎, or ▼, will exit the copy function.

Power-save mode

If the 230 V AC supply is not connected, the time switch enters power-save mode: only the clock is maintained active whilst the display turns off so as to guarantee a long life for the built-in back-up battery.
With a press to the joystick it is possible to "awake" the device and enter Display mode (with the "plug" symbol displayed). A further press to ◎ will enter the program or set-up mode as explained in the Display mode section above.
After about 1 minute of inactivity the power-save mode will start again. During program or set-up the current absorption is higher than in power-save mode, thus influencing the battery life.
In this mode the display back-light is not active. It is activated following a press to the joystick only with the 230 V AC supply connected, but after about 1 minute of inactivity the display back-light will turn off, and to activate it again it is necessary to press the joystick again.

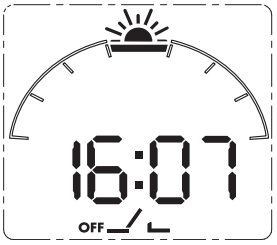


Functions type 12.81

All the functions and the values can be set through the front joystick and are displayed on the front LCD.

Display mode

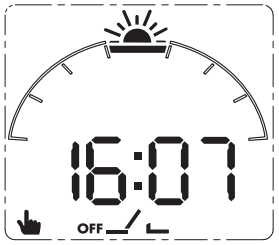
During normal operation, with AC supply connected, the following is displayed:
- the current time (hours and minutes)
- the status (ON/OFF and symbol of contact open/closed) of the 11-14 output contact



From **Display mode** it is possible to enter in **Program mode** or **Setup mode** respectively with a short or long (> 2") press to the joystick centre ◎.

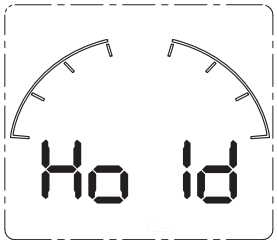
Hand mode

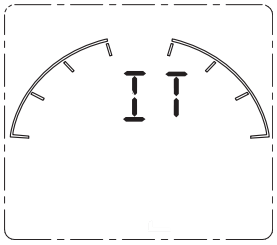
From **Display mode** it is also possible to enter in **Hand mode**, where (independently from the program) the 11-14 output contact is forced to the ON or OFF position with a long (> 2") press to the joystick ⊕ or ⊖ directions, respectively. The "hand" symbol is then displayed.
A long press in the opposite direction will exit the hand mode.



Setup mode

In this mode it is possible to set (in the following order):
- country (using Internet websites extension, e.g. IT, DE, FR..)
- post-code (CP, setting only the first 2 digits, 00 to 99),
- current year
- current day
- current month
- current hour
- current minute
- enable/disable european summer time.

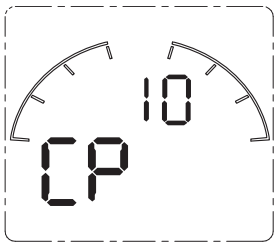




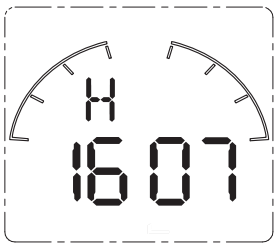
With a short press of the joystick → or ←, it is possible to pass from one setup step to another (confirming the set values); in any step it is possible to modify the set values with a short press to the joystick ⊕ or ⊖. A sustained (> 1") press results in the fast increasing (or decreasing) of values.

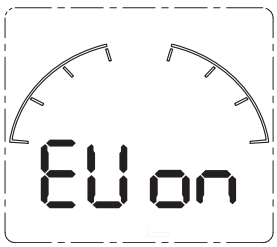
A short press to the joystick centre ◎ will restore the Display mode.

When the post-code is set to – – (between 99 and 00), the manual setting of geographic coordinates is possible: moving right side the joystick, it is visualized the latitude (settable between 30 and 64°North), then the longitude (settable between 16°West and 50°East), finally the Time Zone (Gmt, settable to 00-Greenwich time, 01-Central Europe time, 02-Eastern Europe time or 03-European Russia time); then year and the other setting follows.



Note: the product is supplied with the following factory settings:
- Central Europe time,
- european summer time enabled,
- country Italy,
- post-code 00 (the capital city Rome).





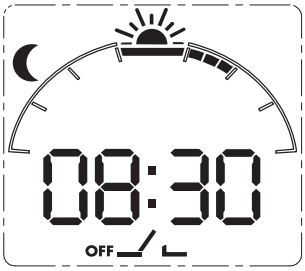
Functions type 12.81

Program mode (anticipate/delay setting)

In this mode it is possible to set independently:

- the anticipate (or the delay) of the light turn-off time in the morning with respect to the "astronomic" sunrise time, depending on the area (post-code or geographical coordinates) set and on the actual day;
- the anticipate (or the delay) of the light turn-on time in the evening with respect to the "astronomic" sunset time.

After entering in Program mode, it is displayed the "astronomic" sunrise time (indicated by the rising sun following the moon, the OFF and the open contact symbols); with a short pressure of the joystick respectively → or ←, it is possible to delay/anticipate, with 10 minutes step, the light turn-off time. This setting will be obviously valid all days, that is the light will always turn-off, for example, 30 minutes after the "astronomic" sunrise.



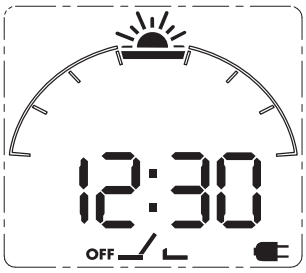
A short pressure of the joystick + or − side will show the "astronomic" sunset time (indicated by the falling sun preceding the moon, the ON and the closed contact symbols); with a short pressure of the joystick respectively → or ←, it is possible to delay/anticipate, with 10 minutes step, the light turn-on time. This setting will be obviously valid all days, that is the light will always turn-on, for example, 30 minutes before the "astronomic" sunset.

A short pressure of the joystick + or − side will continue to alternate the display/setting of turn-off time (sunrise) with the turn-on time (sunset).

A short press to the joystick centre ◎ will restore the display to the Display mode.

Power-save mode

If the 230 V AC supply is not connected, the time switch enters power-save mode: only the clock is maintained active whilst the display turns off so as to guarantee a long life for the built-in back-up battery. With a press to the joystick it is possible to "awake" the device and enter Display mode (with the "plug" symbol displayed). A further press to ◎ will enter the program or set-up mode as explained in the Display mode section above.



After about 1 minute of inactivity the power-save mode will start again. During program or set-up the current absorption is higher than in power-save mode, thus influencing the battery life.

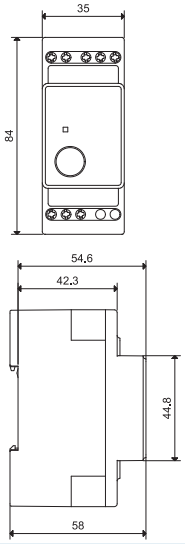
In this mode the display back-light is not active. It is activated following a press to the joystick only with the 230 V AC supply connected, but after about 1 minute of inactivity the display back-light will turn off, and to activate it again it is necessary to press the joystick again.

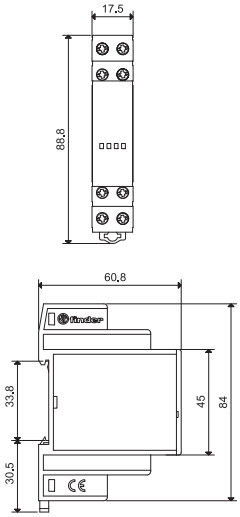
Features

13.01 - Quiet operating electronic step/ monostable relay
1 Pole output contact

13.12 - Call & Reset Relay 2 Pole output contact

- Selectable Step or Monostable operation (type13.01)
- Call relay with reset command suitable for residential and commercial applications: public bathroom, hospital, hotel (type 13.12).
- Control input can be continuously applied
- Longer mechanical and electrical life, and much quieter than electromechanical step relays
- Suitable for SELV applications according to IEC 364, (type 13.01)
- Type 13.01 available also for supply 12 and 24 V AC/DC
- Type 13.12 available at 12 V AC/DC and 24 V AC/DC only
- 35 mm rail (EN 60715) mount
- Cadmium free contact material (type 13.01)

13.01	13.12
	
• Step or monostable relay • 35 mm rail (EN 60715) mount	• Call relay with reset command • 1 CO (SPDT) + 1 NO (SPST-NO) • 35 mm rail (EN 60715) mount • 17.5 mm wide
	




* For version 24 V U_{max} = 33.6 V
** During impulse only.

Features

13.81 - Quiet operation - electronic step relay Rail mount - 1 Pole output contact

13.91 - Quiet operation - electronic step relay and timing step relay (10 minutes)

- Use with 3 or 4 wire connection, with automatic recognition by the relay
- Control input can be continuously applied
- Longer mechanical and electrical life, and much quieter than electromechanical step relays
- Can be mounted behind blanking plates, as widely used in residential wiring systems such as; BTicino: Axolute, Matix, Living e Magic, Gewiss: GW24, Vimar: Plana e Idea ... (type 13.91)
- Box clamp terminals (type 13.81 and 13.91)
- "Zero crossing" load switching (type 13.81 and 13.91)
- 35 mm rail (EN 60715) or flange mount
- Cadmium free contact material

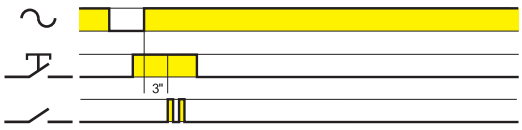
Functions

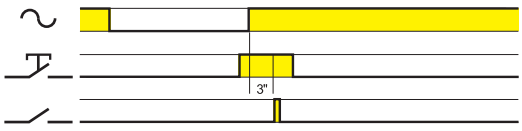
Type	Functions	
13.01		**Monostable** On closure of a switch between terminals (B2-B3) the output contact will close, and remain so, until the switch opens.
		**Step relay (bistable)** After every impulse (B1-B2), the output contact changes state - alternately switching from open to closed and vice versa.
13.12		**Call and Reset relay** On momentary closure of the Set switch (S), the output contact closes. Only a momentary closure of the Reset switch (R) will open the output contact.
13.81		(RI) **Step relay** After every impulse, the output contact changes state - alternately switching from open to closed and vice versa.
13.91		(RI) **Step relay** After every impulse, the output contact changes state - alternately switching from open to closed and vice versa.
		(IT) **Timing step relay** On initial impulse the output contact closes and timing starts for the pre-set duration (fixed 10 min); On expiry of the time delay, the output contact opens. During the timing period it is possible to immediately open the contact with a further impulse.

Operating mode setup for type 13.91

RI → IT



IT → RI



a) Remove the supply voltage
b) Press the control button
c) Apply the supply to the relay, keeping the button closed.
After 3 second, the light will flash twice to indicate the selection of the "IT" function, or flash once for "RI" function.

Features

Range of electronic staircase timers

- 17.5 mm wide
- Time setting from 30 seconds to 20 minutes
- "Zero crossing" load switching
- "Switch-off early warning" - model 14.01
- Suitable for 3 or 4 wire systems, with automatic recognition (14.01 and 14.71) or via "pushbutton configuration" (14.81)
- LED status indicators (14.01 and 14.71)
- Cadmium free contact material
- Can be used with illuminated push - buttons
- "Blade + cross" - both flat blade and cross head screw drivers can be used to adjust the function selector, the timing trimmer, and to disengage the 35 mm rail mounting clip
- European Patent

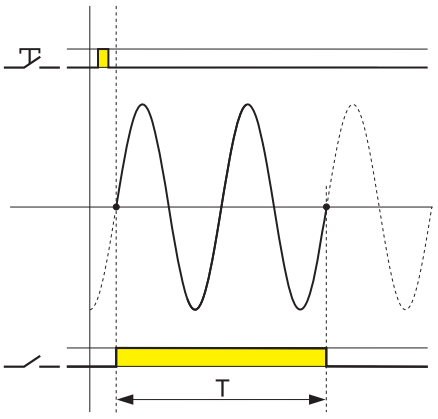
		mm^2	1x6 / 2x4	1x4 / 2x2.5
		AWG	1x10 / 2x12	1x12 / 2x14

Zero crossing switching



1. Lower inrush current protects and increases lamp life
2. Lower inrush current reduces the possibility of contact welding
3. The current at switch-off is also lower, reducing stress and wear on the contacts

Note
Using the type 14.91, the lamps are switched on directly by the pushbutton

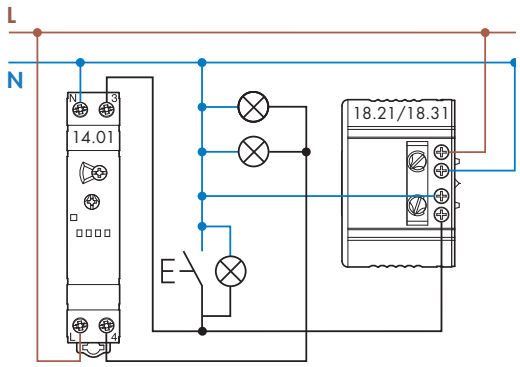
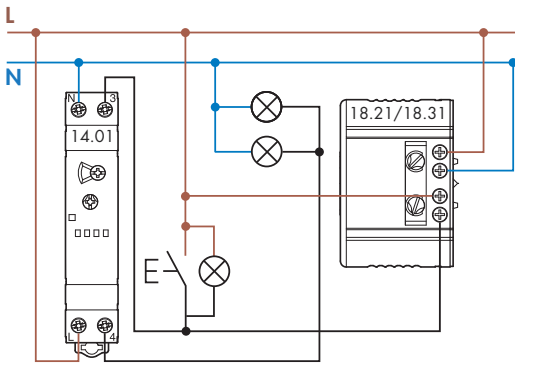
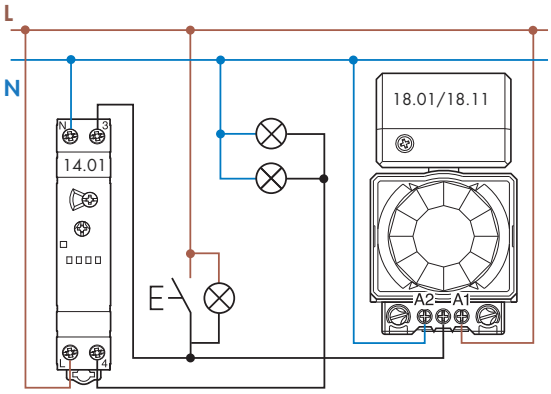
Wiring diagrams - 14.01 triggered by PIR movement detector (18 series)

3 wire connection (with 18.21.8.230.0300 or 18.31.8.230.0300 only)



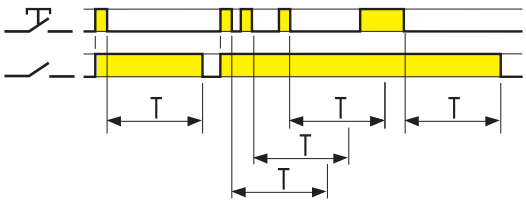
4 wire connection (with 18.01.8.230.0000, 18.11.8.230.0000, 18.21.8.230.0300 or 18.31.8.230.0300)



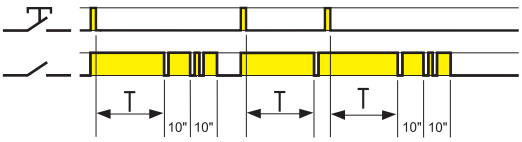


Functions

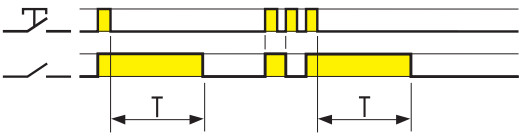
Type 14.01 Functions selectable with front rotary selector



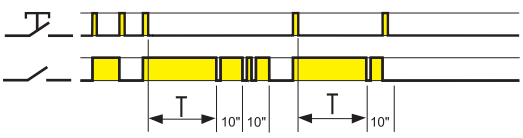
(BE) Staircase relay
On initial impulse the output contact closes and timing starts for the pre-set duration; subsequent impulses during the timing period will extend the timing period by the full pre-set value.
On expiry of the time delay, the output contact opens.



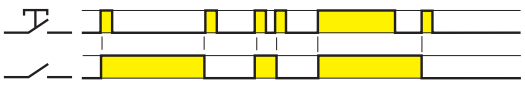
(BP) Staircase relay with early warning
On initial impulse the output contact closes and the timing starts for the pre-set duration.
After the timing period, the output contact blinks off once; 10secs later the contact blinks off twice, and after a further 10secs the contact opens.
During the pre-set and 20 second warning time, it is possible, by a further impulse, to extend the time by the full pre-set value.



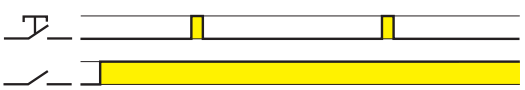
(IT) Timing step relay
On initial impulse the output contact closes and timing starts for the pre-set duration; On expiry of the time delay, the output contact opens.
During the timing period it is possible to immediately open the contact with a further impulse.



(IP) Timing step relay with early warning
On initial impulse the output contact closes and timing starts for the pre-set duration; After the timing period, the output contact blinks off once; 10 secs later the contact blinks off twice, and after a further 10 secs the contact opens.
During the pre-set and 20 second warning time, it is possible to immediately open the output contact by a further impulse.



(RI) Step relay
After every impulse, the output contact changes state - alternately switching from open to closed and vice versa.

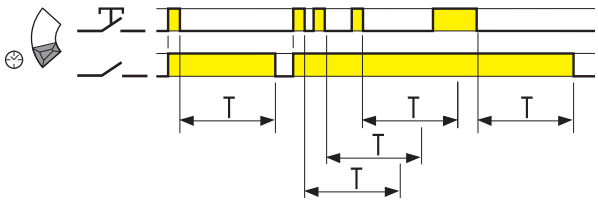


Light ON
With this function set - the output contact stays permanently closed.

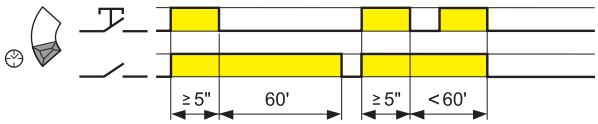
NOTE: The blinking within the Early Warning functions (BP and IP) could cause re-start problems for fluorescent lamps with electromagnetic chokes (both conventional and compact types); We consequently suggest not to use such lamps with these functions.

Functions

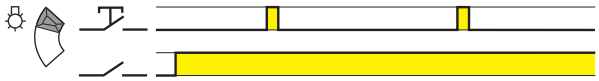
Type 14.71 Functions selectable with front selector



Staircase relay
On initial impulse the output contact closes and timing starts for the pre-set duration; subsequent impulses during the timing period will extend the timing period by the full pre-set value.
On expiry of the time delay, the output contact opens.

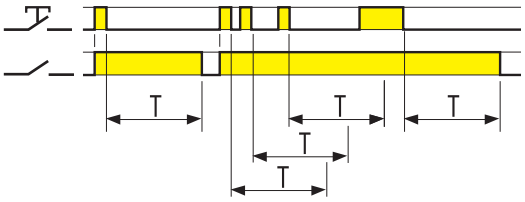


"Staircase maintenance" function
An impulse of ≥ 5 seconds will close the output contact for 60 minutes, after which time the contact will open. Ideal for maintenance or cleaning activities. The 60' timing can be interrupted by a further impulse of ≥ 5 seconds, the output contact opens.

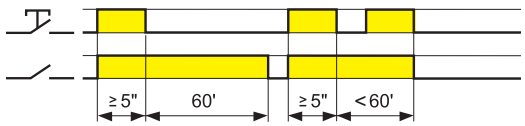


Light ON
With this function set - the output contact stays permanently closed.

Type 14.81

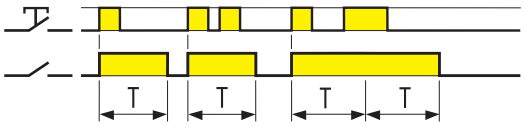


Staircase relay
On initial impulse the output contact closes and timing starts for the pre-set duration; subsequent impulses during the timing period will extend the timing period by the full pre-set value.
On expiry of the time delay, the output contact opens.



"Staircase maintenance" function
An impulse of ≥ 5 seconds will close the output contact for 60 minutes, after which time the contact will open. Ideal for maintenance or cleaning activities. The 60' timing can be interrupted by a further impulse of ≥ 5 seconds, which will re-establish the staircase timer function; so on expiry of the staircase time delay, the output contact opens.

Type 14.91



Signal ON pulse
On initial impulse the output contact closes, and remain so for the duration of the preset delay. On expiry of the time delay, the output contact opens.

VI-2012, www.findernet.com

Features

Electronic step relay and dimmer for control of lighting levels

- Suitable for incandescent and halogen lighting loads (with or without transformer or electronic supply)
- Version compatible with energy saving (CFL or LED) dimmable lamps and with all types of electromagnetic transformers, even under no-load conditions (15.81)
- Use with 3 or 4 wire connection
- "Soft" On and Off transitions
- Two selectable operating modes: with or without previous light level memory
- Step (15.51) or linear (15.51/15.81) dimming
- Thermal protection against overload
- Self resetting thermo-fuse for extreme protection (15.81)
- 230 V AC supply, 50 or 60 Hz versions (15.51)
- 230 V AC supply, 50/60 Hz with automatic recognition of frequency (15.81)

Screw terminal

Nominal voltage (U_N) V AC (50/60 Hz)	230 (6)	230
Operating range	$(0.8...1.1)U_N$	$(0.8...1.1)U_N$
Stand-by power consumption W	≤ 1	≤ 0.8
Technical data		
Ambient temperature range °C	–10...+50 (7)	–10...+50 (8)
Protection category	IP 20	IP 20
Approvals (according to type)	CE EAC	CE EAC

Note

(1) select "incandescent lamp" ( ) position on the front selector
(2) one transformer only. Power-up only with the lamp load connected
(3) select "transformer" ( ) position on the front selector. Preferably, no more than 2 transformers
(4) one transformer only
(5) select "CFL" ( ) position on the front selector, and set the appropriate minimum dimming value (dependent on lamp type)
(6) specific 60 Hz version available (see ordering information)
(7) it is not recommended to mount more than one dimmers in the same wall box, unless adequate ventilation is provided or the lamp load is less than 100 W
(8) with lamp load > 300 W, adequate ventilation must be provided - a gap of 5 mm on both side of the dimmer is suggested

Not compatible with illuminated push-buttons.

Ordering information

Example: type 15.51, electronic step relay and dimmer, 230 V AC.

Thermal protection and signaling

LED (15.81 types)	Supply voltage	Thermal protection
	OFF	–
	ON	–
	ON	ALARM

ALARM
The internal thermal protection will detect an unsafe temperature, due to overload or incorrect installation, and will turn the dimmer output off.
It is possible to turn the dimmer on, by push button, only when the temperature reduces to a safe level (after 1 to 10 minutes, depending on installation conditions) and after removing the cause of the overload.

Functions (15.51 types)

Type	Setting	Step dimming
15.51...0400	**see "Operating mode setup"**	**Operating mode 1 (with memory):** the previous light level is memorized.  **Long control pulse:** The light level is progressively raised or lowered through a maximum of 10 incremental steps. **Short control pulse:** Alternately switches between On and Off. When switching On, the light level assumes the value set during the previous On state.
15.51...0400	**see "Operating mode setup"**	**Operating mode 2 (without memory):** on switch off, the light level is not memorized.  **Long control pulse:** The light level is progressively raised or lowered through a maximum of 10 incremental steps. **Short control pulse:** Alternately switches On or Off between the maximum light level and the off state.

Type	Setting	Linear dimming
15.51...0404	**see "Operating mode setup"**	**Operating mode 3 (with memory):** the previous light level is memorized.  **Long control pulse:** The light level is progressively raised or lowered. **Short control pulse:** Alternately switches between On and Off. When switching On, the light level assumes the value set during the previous On state.
15.51...0404	**see "Operating mode setup"**	**Operating mode 4 (without memory):** on switch off, the light level is not memorized.  **Long control pulse:** The light level is progressively raised or Lowered. **Short control pulse:** Alternately switches On or Off between the maximum light level and the off state.

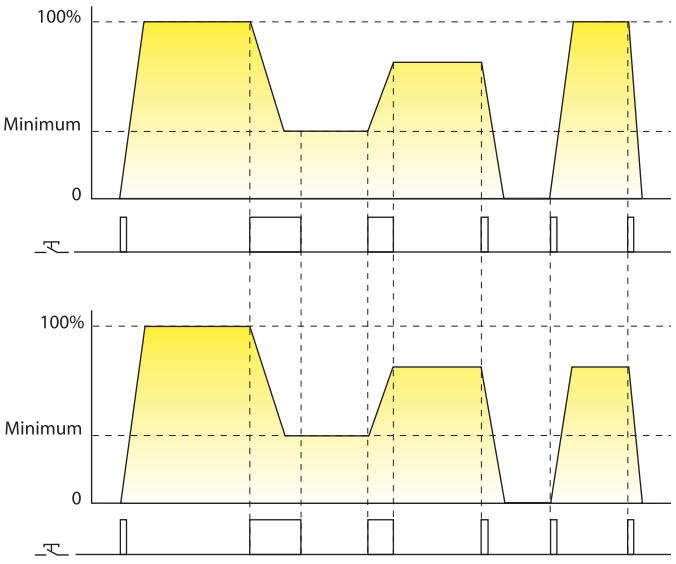
Operating mode setup

Type 15.51

On **15.51** operating mode 1 is preset, but it is possible to change it using the following sequence:
a) remove the supply voltage;
b) press the control button;
c) apply the supply to the relay, keeping the button closed for 3 second;
d) on button release, the light will flash twice to indicate the selection of operating mode 2, or flash once for operating mode 1.
Repeating the above steps will alternately change between operating modes.

Functions (15.81 type)

15.81



Operating mode without memory: at switch-off, the light level is not memorized.

Long control pulse: The light level is progressively raised or lowered in linear way. The lowest value depend on the "minimum dimming level" regulator setting.

Short control pulse: Alternately switches between On and Off between the maximum light level and the off state.

Operating mode with memory: the previous light level is memorized.

Long control pulse: The light level is progressively raised or lowered in linear way. The lowest value dependent on the "minimum dimming level" regulator setting

Short control pulse: Alternately switches between On and Off.
When switching On, the light level assumes the value set during the previous On state.

Type of load	Selector setting		Regulator setting
	With memory (M)	Without memory (~~M~~)	
• Incandescent lamps • 230 V halogen lamps • 12/24 V halogen lamps with electronic transformer/ballast			It is suggested to set the "minimum dimming level" at the lowest value, so that the complete dimming range is available. But if it is necessary to avoid too low a level of illumination, a higher value can be set. 
• Dimmable compact fluorescent lamps (CFL) • Dimmable LED lamps			It is suggested to initially set the "minimum dimming level" at an intermediate value and then if necessary, readjust for a level found to be compatible with the lamp being used. 
• 12/24 V halogen lamps with toroidal or E-core electromagnetic transformer			It is suggested to set the "minimum dimming level" at the lowest value, so that the complete dimming range is available. But if it is necessary to avoid too low a level of illumination, a higher value can be set.

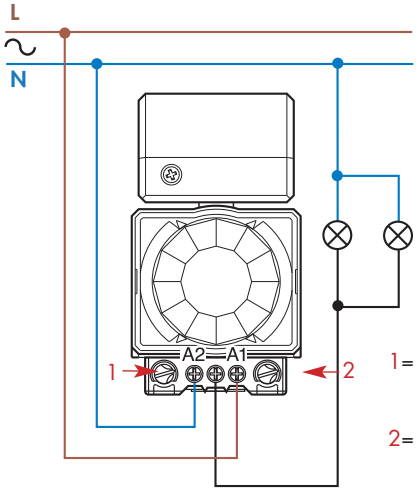
Other data		
Screw torque	Nm	0.5
Max. cable size	mm^2	1.5

- Following the initial power-on, and power-on following a power interruption, the detector makes a hardware-software initialisation for approximately 30 seconds. However, the behavior of the output during this 30 seconds will depend on certain circumstances:
  - If the detector was in the On state before the power interruption, and if the lighting level is (currently) below the pre-set threshold, then the output contact will immediately close when the power is re-applied, for the time delay set by the potentiometer (irrespective of whether movement is being detected).
  - If the detector was in the Off state before the power interruption, or if the ambient light is currently over the pre-set threshold, then the detector will not switch-on until the end of the initialisation phase (assuming movement is then detected).

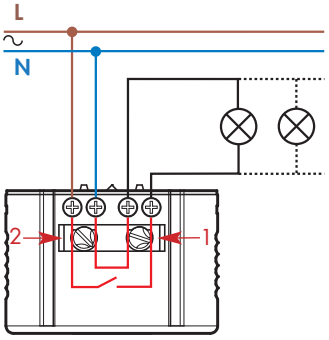
Wiring diagram

Type 18.01 / 18.11



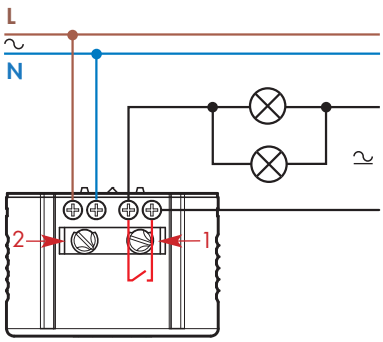
1= ambient light intervention threshold
2= light on time following last detection

Type 18.21 / 18.31 / 18.31...0031



1= ambient light intervention threshold
2= light on time following last detection

Type 18.21-0300 / 18.31-0300



1= ambient light intervention threshold
2= light on time following last detection

The output relay will remain On for the pre-set time, following the last detection of movement.

Beam limiter for 18.21 and 18.31 PIR movement detectors

Reduces the area of survey to 2 meters diameter (versus 8m) at an installation height of 2.8 meters.
(Note: with the beam limiter the ambient light intervention threshold feature will be increased significantly)

V1-2012, www.findernet.com

Features

1 or 2 Pole 16 A Step relays for direct 35 mm rail (EN 60715) mounting

- 17.4 mm wide
- Test button with mechanical indicators
- Choice of 6 switching sequences
- AC coils and DC coils
- Identification label
- Possible to connect illuminated push buttons with the additional part 026.00
- 35 mm rail (EN 60715) mount
- Cadmium free contact material
- Italian Patent

20.21

- Single phase switch 1 NO (SPST-NO)
- 35 mm rail (EN 60715) mount

20.22, 24, 26, 28

- Double phase switch

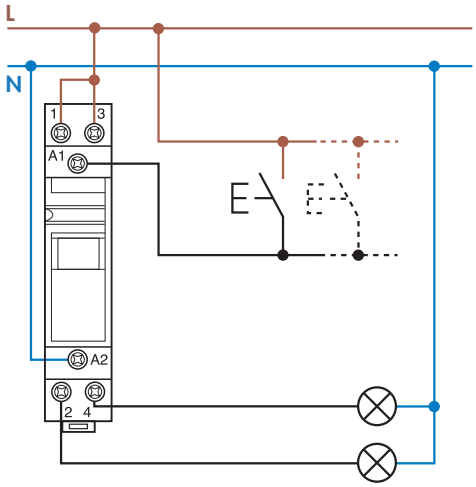
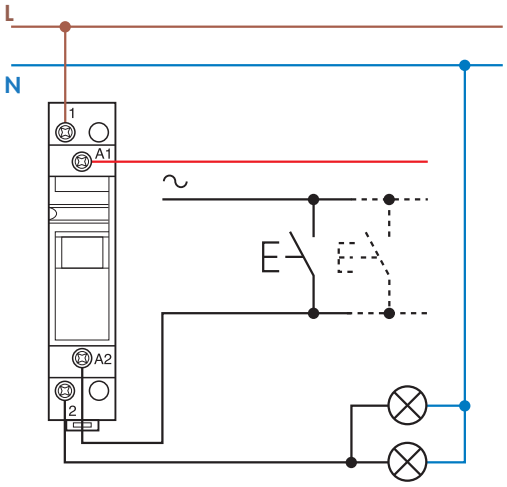
Wiring diagrams



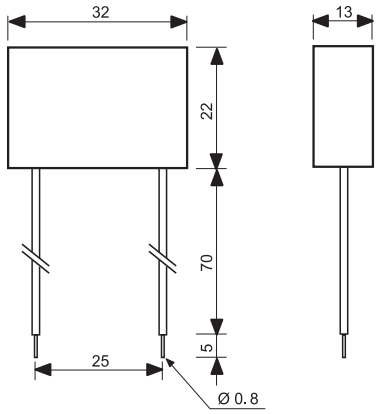
Example: 230 V AC supply voltage.



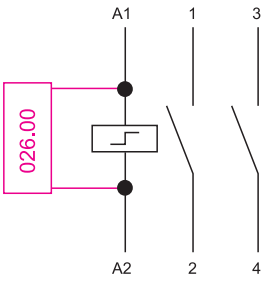
Example: 24 V AC supply voltage.

Accessories

Module for use with illuminated push-buttons



Type 026.00
Sealed construction, 7.5 cm insulated flexible wire termination.



Example of wiring diagram of type 026.00
This module is necessary when using between 1 and a maximum of 15 illuminated push buttons in the coil circuit (Each 1.5 mA max, 230 V AC). It must be connected in parallel to the coil of the relay.

020.01

Adaptor for panel mounting, 17.5 mm wide	020.01

020.24

Sheet of marker tags, plastic, 24 tags, 9x17 mm	020.24

Features

25 A modular contactor - 2 pole

- 17.5 mm wide
- NO contact gap ≥ 3 mm, double break
- Continuous duty for the coil and contacts
- AC/DC silent coil (with varistor protection)
- Protective separation (reinforced insulation) between coil and contacts
- Mechanical and LED indicators as standard
- Auto-On-Off selector version available
- AgNi and $AgSnO_2$ contact versions available
- Compliant with EN 61095: 2009
- Auxiliary contact module available, quick-assembly with the main contactor (1 NO + 1 NC and 2 NO versions)
- 35 mm rail (EN 60715) mount

22.32...1xx0 / 22.32...4xx0

Ordering information

Exemple: 22 series, modular contactor 25 A, 4 NO contacts, coil 230 V AC/DC, $AgSnO_2$ contacts, Auto-On-Off selector + mechanical indicator + LED.

									A	B	C	D
2	2	.	3	4	.	0	.	2 3 0	.	4	3	4	0

Series

Type
3 = 25 A modular contactor range

Number of contacts
2 = 2 pole
4 = 4 pole

Coil version
0 = AC(50/60 Hz)/DC

Coil rated voltage
See coil specifications

D: Special versions
0 = Standard

C: Options
2 = mechanical indicator + LED
4 = Auto-On-Off selector + mechanical indicator + LED

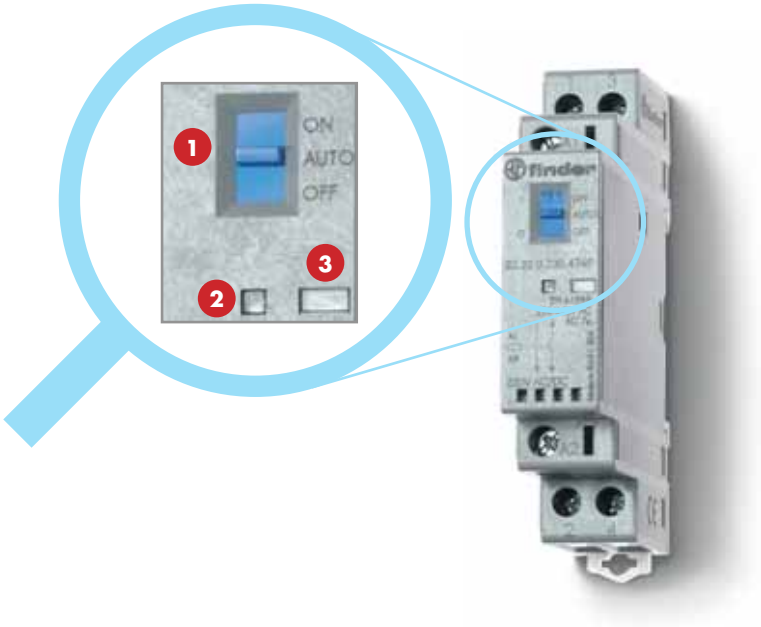
B: Contact circuit
3 = All NO contacts
4 = All NC contacts (22.32 only)
5 = 1 NO + 1 NC
6 = 2 NO + 2 NC
7 = 3 NO + 1 NC

A: Contact material
1 = AgNi
4 = $AgSnO_2$

Selecting features and options: only combinations in the same row are possible.
Preferred selections for best availability are shown in **bold.**

Type	Coil version	A	B	C	D
22.32	AC/DC	**1 - 4**	**3** - 4 - 5	**2 - 4**	0
22.34	AC/DC	**1 - 4**	**3** - 6 - 7	**2 - 4**	0

Auto-On-Off selector + mechanical indicator + LED (xx40 option)



1 Selector

The three-position manual selector has the following functions:

- **ON position** - the contacts are latched in the operated state (NO contacts - closed and NC contacts - open), the mechanical indicator is visible in its window, the LED is not illuminated.
- **AUTO position** - the state of contacts, mechanical indicator and LED follow the coil supply voltage.
- **OFF position** - even if terminals A1 - A2 are supplied with rated voltage, the coil is not energized, and so the contacts remain in the non-operated state, the mechanical indicator is not visible and the LED is not illuminated.

2 LED

3 Mechanical indicator

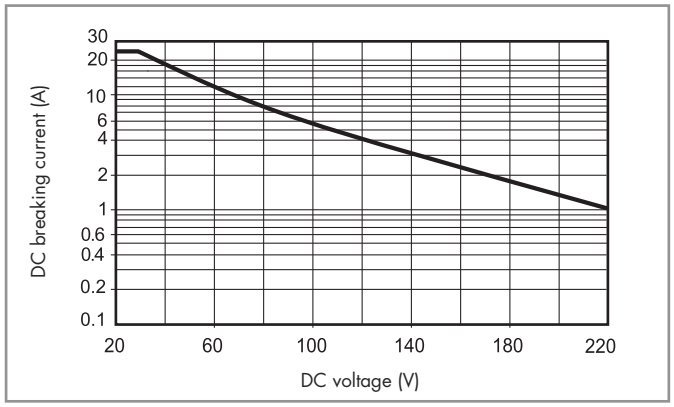
Contact specification

Ratings and utilization categories according to EN 61095: 2009

Utilization category	Typical applications	Load characteristics	Rated current (A)	Rated operational voltage (V)		Rated electrical life (cycles)			
						2-pole AgNi contacts (22.32...1xx0)	2-pole $AgSnO_2$ contacts (22.32...4xx0)	4-pole AgNi contacts (22.34...1xx0)	4-pole $AgSnO_2$ contacts (22.34...4xx0)
				across the pole	between phases				
AC-7a	Slightly inductive loads	cos φ = 0.8	25	250	440	$70 \cdot 10^3$ (NO) $30 \cdot 10^3$ (NC)	$30 \cdot 10^3$	$150 \cdot 10^3$ (NO) $100 \cdot 10^3$ (NC)	$30 \cdot 10^3$
AC-7b	Motor loads	cos φ = 0.45 $I_{making} = 6\ I_{breaking}$	10	250	440	$30 \cdot 10^3$	$30 \cdot 10^3$	$30 \cdot 10^3$	$30 \cdot 10^3$
AC-7c	Compensated electric discharge lamps	cos φ = 0.9 C = 10 µF/A	10	230	400	—	$30 \cdot 10^3$	—	$30 \cdot 10^3$

H 22 - Maximum DC1 breaking capacity



- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of ≥ $100 \cdot 10^3$ can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load.
  Note: the release time for the load will be increased.

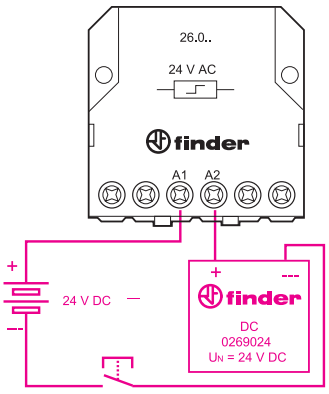
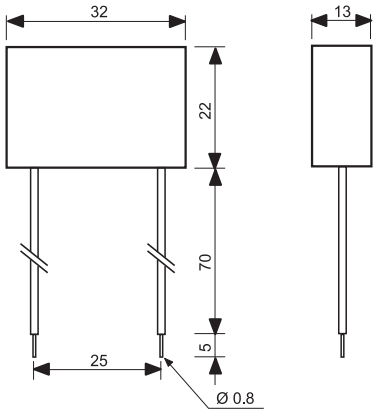
Operating range: (0.9...1.1)U_N
Type: 026.9.024
Nominal voltage: 24 V DC
Max temperature: + 40 °C
Operating range: (0.9...1.1)U_N

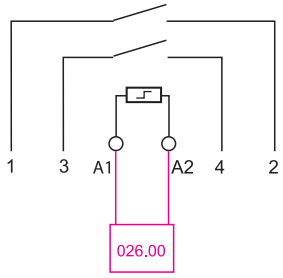


Example of wiring for 24 V DC control application.

Module for use with illuminated push buttons (230 V AC applications)



Type 026.00
Sealed construction, 7.5 cm insulated flexible wire termination.



Example of wiring diagram of type 026.00
This module is necessary when using between 1 and a maximum of 15 illuminated push buttons in the coil circuit (Each 1 mA max, 230 V AC). It must be connected in parallel to the coil of the relay (see diagram).

Features

1 or 2 Pole electromechanical step relay, for electrically common coil and contact circuits

27.0x - Connect up to 24 illuminated push buttons with the addition of module 027.00

27.2x - Connect up to 15 illuminated push buttons (without additional module) - incorporates coil power limiter to permit continuous coil energisation

- Choice of 3 switching sequences
- Screw terminal connections
- AC coil
- Panel mount
- Cadmium free contact material
- Italian Patent

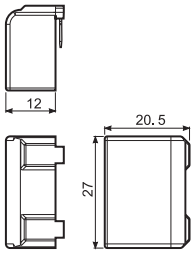
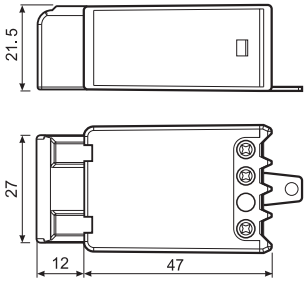
Accessories for types 27.01, 27.05, 27.06

Module for illuminated push-button (230 V AC applications)



Type 027.00
This module is necessary if using up to a maximum of 24 illuminated push-buttons (1 mA max, 230 V AC) in the switching input circuit. It must be plugged directly into the relay.



Type 27.0x + 027.00

Index - General technical information

Reference standards and values

Unless expressly indicated otherwise, the products shown in this catalogue are designed and manufactured according to the requirements of the following European and International Standards:
- **EN 61810-1**, **EN 61810-2**, **EN 61810-7** for electromechanical elementary relays
- **EN 50205** for relays with forcibly guided contacts
- **EN 61812-1** for timers
- **EN 60669-1** and **EN 60669-2-2** for electromechanical step relays
- **EN 60669-1** and **EN 60669-2-1** for light-dependent relays, electronic step relays, light dimmers, staircase switches, movement detectors and monitoring relays.

Other important standards, often used as reference for specific applications, are:
- **EN 60335-1** and **EN 60730-1** for domestic appliances
- **EN 50178** for industrial electronic equipments

According to EN 61810-1, all technical data is specified under standard conditions of 23°C ambient temperature, 96 kPa pressure, 50% humidity, clean air and 50 Hz frequency. The tolerance for coil resistance, nominal absorption and rated power values is ± 10%.
Unless expressly indicated otherwise, the standard tolerances for mechanical drawings are ± 0.1 mm.

Operating & installation conditions

Coil operating range: In general, Finder relays will operate over the full specified temperature range, according to:
• Class 1 – 80% to 110% of nominal coil voltage, or
• Class 2 – 85% to 110% of nominal coil voltage.
Outside the above Classes, coil operation is permitted according to the limits shown in the appropriate "R" chart.
Unless expressly indicated otherwise, all relays are suitable for 100% Duty Cycle (continuous energisation) and all AC coil relays are suitable for 50 and 60 Hz frequency.

Excessive peak voltage limiting: Overvoltage protection (varistor for AC, diode for DC) is recommended in parallel with the coil for nominal voltages ≥ 110 V for the relays of 40, 41, 44, 46 series.

Residual current: When AC relay coils are controlled via a proximity switch, or via cables having length > 10 m, the use of a "residual current bypass" module is recommended, or alternatively, fit a resistor of 62kOhm/1 watt in parallel with the coil.

Ambient temperature: The Ambient temperature as specified in the relevant specification and "R" chart relates to the immediate environment in which the component is situated, as this may be greater than the ambient temperature in which the equipment is located. Refer to page IX for more detail.

Condensation: Environmental conditions causing condensation or ice formation in the relay are not permitted.

Installed orientation: The component's specification is unaffected (unless expressly stated otherwise) by its orientation, (provided it is properly retained, eg by a retaining clip in the case of socket mounted relays).

RC contact suppression: If a resistor/capacitor network is placed across a contact to suppress arcing, it should be ensured that when the contact is open, the leakage current through the RC network does not give rise to a residual voltage across the load (typically the coil of another relay or solenoid) any greater than 10% of the load's nominal voltage - otherwise, the load may hum or vibrate, and reliability can be affected. Also, the use of an RC network across the contact will destroy the isolation normally afforded by the contact (in the open position).

Guidelines for automatic flow solder processes

In general, an automatic flow solder process consists of the following stages:

Relay mounting: Ensure that the relay terminals are straight and enter the PC board perpendicular to the PC board. For each relay, the catalogue illustrates the necessary PC board hole pattern (copper side view). Because of the weight of the relay, a plated through hole printed circuit board is recommended to ensure a secure fixation.

Flux application: This is a particularly delicate process. If the relay is not sealed, flux may penetrate the relay due to capillary forces, changing its performance and functionality.
Whether using foam or spray fluxing methods, ensure that flux is applied sparingly and evenly and does not flood through to the component side of the PC board.
By following the above precautions, and assuming the use of alcohol or water based fluxes, it is possible to satisfactorily use relays with protection category RT II.

Preheating: Set the preheat time and heat to just achieve the effective evaporation of the flux, taking care not to exceed a component side temperature of 100°C (212°F).

Soldering: Set the height of the molten solder wave such that the PC board is not flooded with solder. Ensure the solder temperature and time are kept to 260°C (500°F) and 3 seconds maximum.

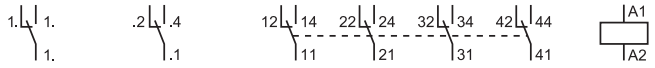
Cleaning: The use of modern "no-clean" flux avoids the necessity of washing the PC board. In special cases where the PC board must be washed the use of wash-tight relays (option xxx1 - RT III) is strongly recommended. After cleaning it is suggested to break the pin on the relay cover. This is necessary to guarantee the electrical life at maximum load as quoted in the catalogue; otherwise ozone generated inside the relay (dependent on the switching load and frequency) will reduce the electrical life. Even so, avoid washing the relay itself, particularly with aggressive solvents or in washing cycles using low temperature water, as this may cause thermal shock to the PC board components. The user should establish compatibility between his cleaning fluid and the relay plastics.

Terminology & definitions

All the following terms used in the catalogue are commonly used in technical language. However, occasionally, National, European or International Standards may prescribe the use of different terms, in which case these will be mentioned in the appropriate descriptions that follow.

Terminal marking

European Standard EN 50005 recommends the following numbering for the marking of relay terminals:
- .1 for common contact terminals (e.g. 11, 21, 31...)
- .2 for NC contact terminals (e.g. 12, 22, 32...)
- .4 for NO contact terminals (e.g. 14, 24, 34...)
- A1 and A2 for coil terminals
- B1, B2, B3 etc. for Signal inputs
- Z1 & Z2 for potentiometer or sensor connection



Pole Number | Contact configuration Number | Example: Relay with 4 poles

For delayed contacts of timers the numbering will be:
- .5 for common contact terminals (e.g. 15, 25,...)
- .6 for NC contact terminals (e.g. 16, 26, ...)
- .8 for NO contact terminals (e.g. 18, 28,...)

IEC 67 and American standards prescribe:
progressive numbering for terminals (1,2,3,....13,14,..) and sometimes A and B for coil terminals.

Contact specification

Symbol	Configuration	EU	D	GB	USA
	Make contact (Normally Open)	NO	S	A	SPST-NO DPST-NO nPST-NO
	Break contact (Normally Closed)	NC	Ö	B	SPST-NC DPST-NC nPST-NC
	Changeover	CO	W	C	SPDT DPDT nPDT

n = number of poles (3,4,...), S = 1 and D = 2

Contact Set: The contact set comprises all the contacts within a relay.

Single contact: A contact with only one point of contact.

Twin/Bifurcated contact: A contact with two points of contact, which are effectively in parallel with each other. Very effective for switching small contact loads such as analogue, transducer, low signal or PLC input circuits.

Double break contact: A contact comprising two points of contact in series with each other. Particularly effective for switching DC loads. The same effect can be achieved by wiring two single contacts in series.

Micro interruption: Interruption of a circuit, without any specific requirements for distance or dielectric strength across the contact gap. All Finder relays comply or exceed this.

Micro disconnection: Adequate contact separation in at least one contact so as to provide functional safety. A dielectric strength requirement must be achieved across the contact gap. All Finder relays comply with this class of disconnection.

Full disconnection: Contact separation for the disconnection of conductors so as to provide the equivalent of basic insulation between those parts intended to be disconnected. There are requirements for both the dielectric strength and the dimensioning of the contact gap.
Finder relays types 45.91, 56.xx - 0300, 62.xx - 0300 and 65.x1 - 0300 comply with this category of disconnection.

Rated current: This coincides with the *Limiting continuous current* - the highest current that a contact can continuously carry within the prescribed temperature limits. It also coincides with the *Limiting cycling capacity*, i.e. the maximum current that a contact is capable of making and breaking under specified conditions. In virtually all cases the Rated current is also the current that, when associated with the Rated switching voltage, gives rise to the Rated load (AC1). (The exception being the 30 series relay).

Maximum peak current: The highest value of inrush current (≤ 0.5 seconds) that a contact can make and cycle (duty cycle ≤ 0.1) without undergoing any permanent degradation of its characteristics due to generated heat. It also coincides with the *limiting making capacity*.

Rated switching voltage: This is the switching voltage that when associated with the Rated current gives rise to the Rated load (AC1). The Rated load is used as the reference load for electrical life tests.

Maximum switching voltage: This represents the maximum nominal voltage that the contacts are able to switch and for the relay to meet the insulation and design requirements called for by the insulation coordination standards.

Rated load AC1: The maximum AC resistive load (in VA) that a contact can make, carry and break repeatedly, according to classification AC1 (see Table 1). It is the product of rated current and rated voltage, and is used as the reference load for electrical life tests.

Rated load AC15: The maximum AC inductive load (in VA) that a contact can make, carry and break repeatedly, according to classification AC15 (see Table 1), called "AC inductive load" in EN 61810-1:2008, Annex B.

Single-phase motor rating: The nominal value of motor power that a relay can switch.
(The figures are given in kW; the horsepower rating can be calculated by multiplying the kW value by 1.34 i.e. 0.37 kW = 0.5 HP).
Note: "inching" or "plugging" is not permitted.
If reversing motor direction, always allow an intermediate break of > 300 ms, otherwise an excessive inrush peak current (caused from change of polarity of motor capacitor) may occur, causing contact welding.

Nominal lamp ratings: Lamp ratings for 230V AC supply for:
- Incandescent (tungsten filament) lamps
- Standard and halogen filled types
- Fluorescent lamps without power factor compensation
- Fluorescent lamps compensated to Cos φ ≥ 0.9 (using conventional power factor correction capacitors)

For other lamp types, such as HID, or Electronic Ballast driven fluorescent lamp loads – please enquire.

Breaking capacity DC1: The maximum value of DC resistive current that a contact can make, carry and break repeatedly, according to classification DC1 (see Table 1).

Minimum switching load: The minimum values of power, voltage and current that a contact can reliably switch. For example, if minimum values are 300 mW, 5 V / 5 mA:
- with 5 V the current must be at least 60 mA;
- with 24 V the current must be at least 12.5 mA;
- with 5 mA the voltage must be at least 60 V.

For gold contact variants, loads no less than 50 mW, 5 V / 2 mA are suggested.
With 2 gold contacts in parallel, it is possible to switch 1 mW, 0.1 V / 1 mA.

Electric life tests: The Electrical life at rated load AC1; as specified in the Technical data, represents the life expectancy for an AC resistive load at rated current and 250 V.
(This value can be used as the relay B_{10} value; see "Electrical life "F-chart" and "Reliability" sections).

Electrical life "F-chart": The "Electrical life (AC) v contact current" chart indicates the life expectancy for an AC resistive load for different values of contact current. Some charts also indicate the results of electrical life tests for Inductive AC loads with a power factor of Cos φ = 0.4 (applicable for both the contact closing and opening).
In general, the reference load voltage applicable to these life expectancy charts is Un= 250 V AC. However, the life indicated can also be assumed to be approximately valid for voltages between 125 V to 277 V. Where the life expectancy chart shows a curve for 440 V, the life indicated can also be assumed to be approximately valid for voltages up to 480 V.

Note: Life, or number of cycles, from these charts can be taken as indicating the B_{10} statistical value for the purposes of reliability calculations. And, this value multiplied by 1.4 could be taken as an approximation to the related MCTF (Mean Cycles To Failure) figure. (Failure, in this case, refers to the contact "wear-out" mechanism that occurs at relatively high contact loads.)

Predicting life expectancy at voltages lower than 125 V:
For load voltages < 125 V (i.e.110 or 24 V AC), the electrical life will rise significantly with decreasing voltage. (A rough estimate can be made using a multiplying factor of 250/2Un and applying it to the life expectancy appropriate to the 250 V load voltage).
Estimating switching current at voltages greater than 250 V: For load voltages higher than 250 V (but less than the maximum switching voltage specified for the relay), the maximum contact current should be limited to the Rated load AC1 divided by the voltage being considered. For example, a relay with rated current and rated load AC1 of 16 A and 4000 VA respectively, is able to switch a maximum current of 10 A at 400 V AC: the corresponding electrical life will be approximately the same as that at 16 A 250 V.

Unless otherwise specified, the following test conditions apply:
- Tests performed at the maximum ambient temperature.
- Relay coil (AC or DC) energised at rated voltage.
- Load test applied to the NO contacts.
- Switching frequency for elementary relays: 900 cycles/h with 50% duty cycle (25 % for relays with rated current > 16 A and for 45.91 and 43.61 types).
- Switching frequency for step relays: 900 cycles/h for the coil, 450 cycles/h for the contact, 50% duty cycle.
- Electrical life expectancy values are valid for relays with standard contact material; data for optional materials are available on request.

Load reduction factor versus Cos φ: The load current for AC loads which comprise both an inductive and resistive component can be estimated by applying a reduction factor (k) to the resistive contact current (according to the load's Cos φ). Such loads should not be taken as appropriate for electric motors or fluorescent lamps, where specific ratings are quoted. They are however, appropriate for inductive loads where the current and Cos φ are substantially the same at "make" and "break", and are also widely specified by international relay standards as reference loads for performance verification and comparison.

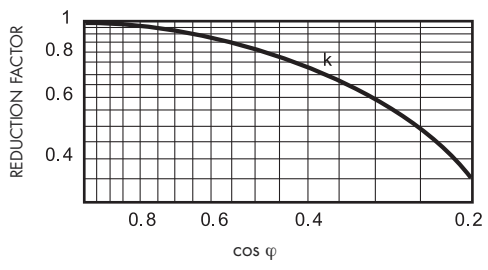


TABLE 1 ***Contact load classifications*** *(related to the utilization categories defined in EN60947-4-1 and EN60947-5-1)*

Load classification	Supply type	Application	Switching with relay
AC1	AC single-phase AC three-phase	Resistive or slightly Inductive AC loads.	Work within the relay data.
AC3	AC single-phase AC three-phase	Starting and stopping of Squirrel cage motors. Reversing direction of rotation only after motor has stopped rotating. Three-phase: Motor reversal is only permitted if there is a guaranteed break of 50ms between energisation in one direction and energisation in the other. Single-phase: Provision of 300ms "dead break" time when neither relay contacts are closed - during which time the capacitor discharges harmlessly through the motor windings.	For single-phase: keep to the relay data. For three-phase: see "Three-phase motors" section.
AC4	AC three-phase	Starting, Stopping and Reversing direction of rotation of Squirrel cage motors. Jogging (Inching). Regenerative braking (Plugging).	Not possible using relays. Since, when reversing a phase connection, severe contact arcing will occur.
AC14	AC single-phase	Control of small electromagnetic loads (<72 VA), power contactors, magnetic solenoid valves, and electromagnets.	Assume a peak inrush current of approx. 6-times rated current, and keep this within the the specified "Maximum peak current" for the relay.
AC15	AC single-phase	Control of small electromagnetic loads (>72 VA), power contactors, magnetic solenoid valves, and electromagnets.	Assume a peak inrush current of approx. 10-times rated current, and keep this within the specified "Maximum peak current" for the relay.
DC1	DC	Resistive loads or slightly inductive DC loads. (The switching voltage at the same current can be doubled by wiring 2 contacts in series).	Work within relay data (see the diagram "Maximum DC1 breaking capacity").
DC13	DC	Control of electromagnetic loads, power contactors, magnetic solenoid valves, and electromagnets.	This assumes no inrush current, although the switch off over-voltage can be up to 15 times the rated voltage. An approximation of the relay rating on a DC inductive load with 40 ms L/R can be made using 50 % of the DC1 rating. If a freewheeling diode is wired in parallel to the load, it can be considered the same value as DC1. See the diagram "Maximum DC1 breaking capacity"

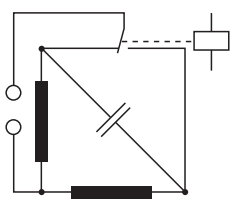
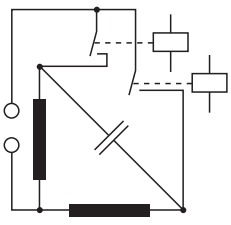
Capacitor start motors: Single phase 230V AC capacitor start motors have a starting current of about 120% of the rated current. However, damaging currents can result from an instantaneous reversal of the direction of rotation. In the first diagram, high circulating currents can cause severe arcing across the contact gap, as the changeover contacts make an almost instantaneous reversal of polarity to the capacitor. Measurements have shown a peak current of 250A for a 50 Watt motor, and up to 900A for a 500 Watt motor. This inevitably leads to welding of the contacts. Reversing the direction of such motors should therefore use two relays, as the second diagram shows, whereby in the control to the relay coils a "dead break" of approximately 300 ms is provided. The delay can either be provided by another control component such as a Timer, or through the Microprocessor etc., or by connecting a suitable NTC resistance in series with each relay coil. Cross interlocking the coil circuits of both relays will not produce the required delay! Moreover, the use of anti-weld contact material will not solve the problem.



Incorrect AC motor reversal:
Contact is in the intermediate state for less than 10ms – insufficient time to allow the energy in the capacitor to dissipate before the electrical connection is remade to the opposite polarity.



Correct AC motor reversal:
Provision of 300 ms "dead break" time when neither relay contacts are closed - during which time the capacitor discharges harmlessly through the motor windings.

Three-phase alternating current loads: Larger three-phase alternating current loads should preferably be switched with contactors according to EN 60947-4-1 Electromechanical contactors and motor starters. Contactors are similar to relays but they have their own characteristics; typically compared to relays:
· They can normally switch different phases at the same time.
· They are physically much larger.
· Their design and construction usually features double break contacts.
· They can withstand certain short-circuit conditions.
There is nevertheless, some overlap between relays and contactors regarding switching characteristics and applications.
However, when switching three-phase alternating current with relays, consider and take into account:
- The isolation co-ordination, i.e. the voltage stress and the degree of pollution between the contacts according to the insulation rated voltage.
- And, avoid the use of the NO relay versions with 3mm contact gaps, unless the isolation afforded by the contact gap is specifically required.

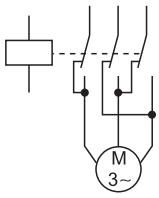
Three-phase motors: Higher power three-phase motors are often switched by a 3-pole contactor, where there is high isolation/separation between phases. However, for space, size and other reasons, relays are also called upon to switch 3-phase motors.

TABLE 3
Motor ratings v relay series

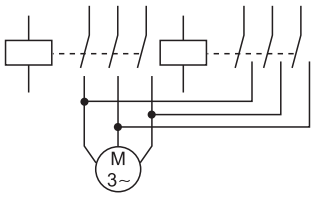
Relay series	Motor Power (400 V 3 phase)		Permissible degree of pollution	Impulse voltage
	kW	PS(hp)		
55.33, 55.13	0.37	0.50	2	4
56.34, 56.44	0.80	1.10	2	4
60.13, 60.63	0.80	1.10	2	3.6
62.23, 62.33, 62.83	1.50	2.00	3	4

62 series relay is also capable to switch 1 hp 480 V 3 phase motors

Reversing the motor: Take particular care if it is required to change the motor direction by reversing two of the supply phases applied to the motor terminals, as this will result in severe damage unless there is a "dead time" between the changeover. Therefore, use one relay for the forward direction and another for the reverse direction (as the following diagram). And, most importantly, ensure that there is a "dead time" of no less than 50ms - when neither relay coil is energised. Simple cross interlocking of the relay coils will not produce a Time delay! However, choosing a tougher, anti-weld contact material may further improve the reliability and performance, and is advised.



Incorrect three-phase motor reversal:
The electrical stress of opposing phase voltages across the contact gap, together with contact arcing can result in a phase to phase short-circuit.



Correct three-phase motor reversal:
"Dead break" time of >50 ms, during which time neither the Forward nor the Reverse relay contacts are closed.

Notes:
1. For AC3 category (starting and switching off) - motor reversal is only permitted if there is a guaranteed break of 50ms between energisation in one direction and energisation in the other. Observe the maximum starts per hour, according to the motor manufacturer's recommendation.
2. AC4 category (starting, plugging, reversing and inching/jogging) is not possible with relays or small contactors. In particular, the direct reversing of phase connections for "plugging" will result in severe contact arcing leading to a short-circuit within the relay or contactor.
3. Under certain circumstances it may be preferable to use three single pole relays to control each phase individually, and so achieve greater separation between the phases. (Any relatively small time difference between the operation times of the three relays is insignificant compared to the much slower operation of contactors.)

Switching different voltages within a relay: Switching different voltages in a relay e.g. 230 V AC with one contact and 24 V DC with a neighboring contact is possible -provided that the Insulation type between adjacent contacts is at least of Basic level. However, note that the equipment standard might demand a higher level that is not possible using adjacent contacts on the same relay. The possibility of using more than one relay could be considered.

Contact resistance: Measured, according to Application Category (Table 4), at the external terminals of the relay. It is a final test value, not necessarily reproducible subsequently. It has little effect on relay reliability for most applications since a typical value would be < 50 mΩ (measured with 24 V 100 mA).

Contact categories according to EN 61810-7: The effectiveness with which a relay contact can make an electrical circuit depends on several factors, such as the material used for the contact, its exposure to environmental pollution and its design etc.. Therefore, for reliable operation, it is necessary to specify a Contact Category, which is defined in terms of the characteristics of the load. The appropriate Contact Category will also define the voltage and current levels used to measure the contact resistance. All Finder relays are category CC2.

TABLE 4 *Contact categories*

Contact category	Load characteristic	Contact Resistance Measurement	
CC0	Dry circuit	30 mV	10 mA
CC1	Low load without arcing	10 V	100 mA
CC2	High load with arcing	30 V	1 A

TABLE 5 *Contact materials characteristics*

Material	Property	Typical application
AgNi + Au (Silver Nickel Gold plated)	- Silver-nickel base with a galvanic hard gold plating of 5 µm typical thickness - Gold is not attacked by industrial atmospheres - With small loads, contact resistance is lower and more consistent compared to other materials **NOTE:** 5 µm hard gold plating is completely different to 0.2µm gold flashing, which allows only protection in storing, but no better performance in use.	Wide range applications: - Small load range (where gold plating erodes very little) from 50 mW (5 V - 2 mA) up to 1.5 W/24 V (resistive load). - Middle load range where gold plating erodes after several operations and the property of basic AgNi becomes dominant. **NOTE:** for switching lower load, typically 1mW (0.1 V - 1 mA), (for example in measuring instruments), it is recommended to connect 2 contacts in parallel.
AgNi (Silver Nickel)	- Standard contact material for most relay applications - High wear resistance - Medium resistance to welding	- Resistive and slightly inductive loads - Rated current up to 12 A - Inrush current up to 25 A
AgCdO (Silver Cadmium Oxide)	- High wear resistance with higher AC loads - Good resistance to welding	- Inductive and motor loads - Rated current up to 30 A - Inrush current up to 50 A
$AgSnO_2$ (Silver Tin Oxide)	- Excellent resistance to welding	- Lamp and capacitive loads - Very high Inrush current (up to 120 A) loads

Coil specification

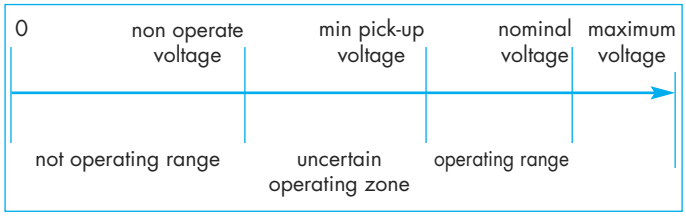
Nominal voltage: The nominal value of coil voltage for which the relay has been designed, and for which operation is intended. The operating and performance characteristics are with respect to the coil at nominal voltage.

Rated power: The DC power value (W) or the apparent AC power value (VA with closed armature) which is absorbed by the coil at 23°C and at rated voltage.

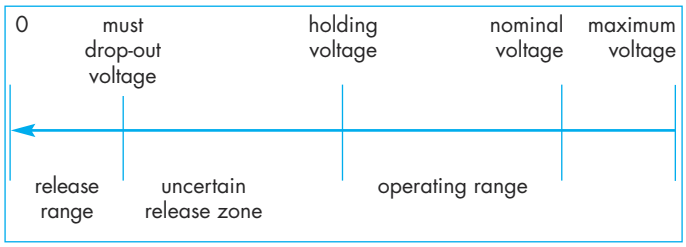
Operating range: The range of input voltage, in nominal voltage applications, in which the relay works in the whole range of ambient temperatures, according to operating class:
- class 1: $(0.8...1.1)U_N$
- class 2: $(0.85...1.1)U_N$

In application where the coil voltage doesn't meet the tolerances of nominal voltage, the diagrams "R" shows the relation of maximum coil voltage permitted and pick-up voltage (without pre-energisation) versus ambient temperature.

ENERGIZATION VOLTAGE



DE-ENERGIZATION VOLTAGE



Non-operate voltage: The highest value of input voltage at which the relay will not operate (not specified in the catalogue).

Minimum Pick-up voltage (Operate voltage): The lowest value of applied voltage at which the relay will operate.

Maximum permitted voltage: The highest applied coil voltage that the relay can continuously withstand, dependent on ambient temperature (see "R" diagrams).

Holding voltage (Non-release voltage): The lowest value of coil voltage at which the relay (which has previously been energised with a voltage within the operating range) will not drop-out.

Must drop-out voltage (Must release voltage): The highest value of coil voltage at which the relay (having previously been energised with a voltage within the operating range) will definitely drop-out.
The same "per unit" value can be applied to the nominal coil current value to give an indication of the maximum leakage current that may be permitted in the coil circuit, before problems with relay release might be expected.

Coil Resistance: The nominal value of the coil resistance under the standard prescribed condition of 23°C ambient. Tolerance is ± 10%.

Rated coil consumption: The nominal value of coil current, when energized at nominal voltage (and at 50Hz for AC coils).

Thermal tests: Calculation of the coil temperature rise (ΔT) is made by measuring the coil resistance in a temperature controlled oven (not ventilated) until a stable value is reached (no less than 0.5 K variation in 10 minutes).
That is: $\Delta T = (R2 - R1)/R1 \times (234.5 + t1) - (t2 - t1)$
where:
R1 = initial resistance
R2 = final resistance
t1 = initial temperature
t2 = final temperature

Monostable relay: An electrical relay which, having responded to coil energisation by changing contact state, returns to the previous contact state when the coil energisation is removed.

Bistable relay: An electrical relay, which, having responded to coil energisation by changing contact state, retains that contact state after the coil energisation has been removed. A further energisation of the coil is necessary to cause the contact state to revert.

Latching relay: A bistable relay, where the contacts retain their state due to a mechanical latching mechanism. Subsequent applications of coil energisation causes the contacts to "toggle" open and closed.

Remanence relay: A bistable relay, where the contacts retain their operated (or Set) state due to remanent magnetism in the relay iron circuit caused by the application of a DC current through the coil.
Resetting the contact state is achieved by passing a smaller DC current through the coil in the opposite direction.
For AC excitation, magnetization takes place via a diode to produce a DC set current, and demagnetising is achieved by applying an AC coil current of lower magnitude.

Insulation

EN/IEC 61810-1 Relay standard:
The "Scope" of the relay standard says of itself "... IEC 61810-1 applies to electromechanical elementary relays (non-specified time all-or-nothing relays) for incorporation into equipment. It defines the basic functional requirements and safety-aspects for applications in all areas of electrical engineering or electronics, such as:
- general industrial equipment,
- electrical facilities,
- electrical machines,
- electrical appliances for household and similar use,
- information technology and business equipment,
- building automation equipment,
- automation equipment,
- electrical installation equipment,
- medical equipment,
- control equipment,
- telecommunications,
- vehicles,
- transportation (e.g. railways)..."

Relay function and Isolation: One of the main functions of a relay is to connect and disconnect different electric circuits, and usually, to maintain a high level of electrical separation between the various circuits.
It is therefore necessary to consider the level of isolation appropriate to the application and the task to be performed - and to relate this to the relay's specification.
In the case of electromechanical relays the areas of isolation generally considered are:
- Isolation between coil and all contacts (the "contact set").
  Catalogue data - "Insulation between coil and contact set"
- Isolation between physically adjacent, but electrically separate, contacts of a multi-pole relay. Catalogue data – "Insulation between adjacent contacts".
- Isolation between the open contacts (applies to the NO contact, and the NC contact when the coil is energised).
  Catalogue data - "Insulation between open contacts".

Specifying isolation levels
There are several ways of specifying or describing the level of isolation offered by, or demanded of, a relay. These include:

Insulation coordination, which focuses on the levels of impulse voltage likely to be seen on the supply lines of the application equipment and the cleanliness of the immediate surroundings of the relay in the equipment. And, as a consequence, it demands appropriate levels of separation between circuits, in terms of isolating distances and quality of insulating material used etc. (see additional information under "Insulation coordination")

Type of insulation; For both equipment and components such as a relay, there are several types (or levels) of insulation that might be demanded between the various circuits. The appropriate type will depend on the specific function being performed, the voltage levels involved, and the associated safety consequences. The various types of insulation are listed below, and those appropriate to each relay series are stated within the relay data; Specifically, within the table under the section entitled Technical data, sub-heading; Insulation.

Functional insulation; Insulation between conductive parts, which is necessary only for the proper functioning of the relay.
Basic insulation; Insulation applied to live parts to provide basic protection against electric shock.
Supplementary insulation; Independent insulation applied in addition to basic insulation, in order to provide protection against electric shock in the event of a failure of basic insulation.
Double insulation; Insulation comprising both basic insulation and supplementary insulation.
Reinforced insulation; A single insulation system applied to live parts, which provides a degree of protection against electric shock equivalent to double insulation.

(Usually, the decision as to the appropriate type of insulation will have already been made by the equipment standard.)

Dielectric strength, and high voltage impulse tests; These are either, final inspection or Type tests, which prove the level of isolation in terms of the minimum voltage stress that can be withstood, between the various specified electrical circuits. As the *only* method of specifying and checking for adequate isolation, this tends to be the more historical approach. However, there are still some dielectric strength requirements to be found within both the Insulation coordination approach and the Level of Insulation approach.

Insulation coordination: In accordance with EN 61810-1 and IEC 60664-1:2003, the Insulation characteristics offered by a relay can be described by just two characteristic parameters – the Rated Impulse Voltage and the Pollution Degree.
To ensure the correct Insulation Coordination between the relay and the application, the equipment designer (relay user) should establish the Rated Impulse Voltage appropriate to his application, and the Pollution Degree for the microenvironment in which the relay is situated. He should then match (or coordinate) these two figures with the corresponding values given in the appropriate relay data, under the section entitled Technical data, sub-heading; Insulation.
Rated Impulse Voltage; To establish the appropriate Rated Impulse Voltage refer to the appropriate Equipment Standard which may specify mandatory values for equipment being designed. Alternatively, using the Rated Impulse Voltage table (Table 6) with knowledge of the Nominal Voltage of the Supply System and knowledge of the Overvoltage Category, determine the appropriate Rated Impulse Voltage.
Overvoltage Category; this is described in IEC 60664-1, but is also summarised in the footnotes to Rated Impulse Voltage table. Alternatively, it may be specified in the equipment standard.
Pollution Degree; determine this by considering the immediate surroundings of the relay (refer to Pollution Degree table 7). Then check that the relay specification offers the appropriate (or better) Rated Impulse Voltage and Rated Insulation Voltage, for that Pollution Degree.

Nominal voltage of supply system: This effectively describes the source of the power supply system, so 230/400 V AC indicates that this would be (or is likely to be) a three-phase sub-station transformer with a Neutral connection. Being aware of the source of the supply system is important since (in conjunction with the Overvoltage category) it determines the typical levels of impulse voltage likely to be seen on the supply lines, and this has to be taken into account in the designing of the relay. However, it does not necessarily follow that the relay will be rated by the manufacturer for use at the highest voltage of the supply system. It is the declared Rated Insulation Voltage that confirms this aspect.

Rated Insulation Voltage: This is a notional value of voltage that indicates the relay's insulation as being suitable for handling voltages up to this level. Note that this notional Rated Insulation Voltage is selected from a list of preferred values. For Finder relays, 250 V and 400 V are two such preferred values, and of course they will cover respectively, the 230 V L-N and 400 V L-L voltages commonly encountered in practice.

TABLE 6 *Rated impulse voltage*

Nominal voltage of the supply system[1] V		Rated insulation voltage V	Rated impulse voltage kV			
Three-phase systems	Single-phase systems		Overvoltage category			
			I	II	III	IV
	120 to 240	125 to 250	0.8	1.5	2.5	4
230/400		250/400	1.5	2.5	4	6
277/480		320/500	1.5	2.5	4	6

(1) In accordance with IEC 60038.

Remark: The descriptions of overvoltage categories below are for information. The actual overvoltage category to be considered has to be taken from the product standard defining the application of the relay.
Overvoltage category I Applies to equipment intended for connection to fixed installations of buildings, but where measures have been taken (either in the fixed installation or in the equipment) to limit transient overvoltages to the level indicated.
Overvoltage category II Applies to equipment intended for connection to fixed installations of buildings.
Overvoltage category III Applies to equipment in fixed installations, and for cases where a higher degree of availability of the equipment is expected.
Overvoltage category IV Applies to equipment intended for use at or near the origin of the installation, from the main distributor towards the supply mains.

TABLE 7 *Pollution degree*

Pollution degree	Immediate surroundings of relay
1	No pollution or only dry, non-conductive pollution occurs. The pollution has no influence.
2	Only non-conductive pollution occurs, except that occasionally a temporary conductivity caused by condensation is to be expected.
3	Conductive pollution occurs or dry, non-conductive pollution occurs which becomes conductive due to condensation, which is to be expected.

Dependent on the product standard, pollution degree 2 and 3 are commonly prescribed for equipment. For example, EN 50178 (electronics for use in power installations) prescribes, under normal circumstances, contamination level 2.

Dielectric strength: This can be described in terms of an AC voltage test, or in terms of an Impulse (1.2/50 µs) voltage test. (The correspondence between the AC test and Impulse voltage test is listed in IEC 60664-1 Annex A, Table A.1).
All Finder relays receive a 100 % final inspection AC (50Hz) dielectric strength test; applied between all contacts and coil, between adjacent contacts, and across open contacts. The leakage current must be less than 3 mA.
For Type testing, both AC and Impulse voltage dielectric strength tests are applied.

Insulation Group: This was the older Insulation Group classification (such as C 250), which was according to the VDE 0110 standard. They have largely been replaced with the more recent way of specifying insulation properties, according to Insulation Coordination.

SELV, PELV and Safe separation: Insulation Coordination as described earlier ensures the isolation of hazardous voltages from other circuits to a safe engineering level, but may not be adequate on its own if the design of the equipment permits the LV circuit to be accessible and therefore able to be touched directly or, where the nature and location of the electrics presents extra dangers.
Therefore, for these extra dangerous applications (such as swimming pool lighting or bathroom electrics) there can be a need for a special low voltage supply system (SELV or PELV), that is inherently safe and highly secure, working at low voltage and with much higher levels of physical isolation and integrity between it and other hazardous circuits.

The SELV (Separated Extra Low Voltage) system is achieved by designing with double or reinforced insulation and by ensuring "safe separation" from hazardous circuits in accordance with regulations for SELV circuits. The SELV voltage (which is isolated from Ground) must be derived via a safety transformer meeting double or reinforced isolation between the windings, as well as other safety requirements demanded by the appropriate standard.
Note: The value for the "safe voltage" can differ slightly dependent upon the particular application or end product regulation.
There are specific requirements for keeping SELV circuits and wiring separate from other hazardous circuits, and it is this aspect concerning the separation of the coil to contacts that is met by several Finder relays as standard, and as a special version of the 62 series of relays - where an additional barrier is a special option.

The PELV system (Protected Extra Low Voltage), like the SELV system, requires a design that guarantees a low risk of accidental contact with a high voltage, but in contrast, it has a protective earth (ground) connection. Like SELV, the transformer can have windings separated by double or reinforced isolation, or by a conductive shield with a protected earth connection.

Consider a common situation, where the mains voltage of 230 V and a low voltage circuit both appear within a relay; all the following requirements must be met by the relay - and also applied to the connections/wiring to it.

- The low voltage and the 230 V must be separated by double or reinforced insulation. This means that between the two electrical circuits there must be guaranteed a dielectric strength of 6 kV (1.2/50 µs), an air distance of 5.5 mm and, depending on the pollution degree and on material used, an appropriate tracking distance.
- The electrical circuits within the relay must be protected against any possibility of bridging, caused for instance by a loose metal part. This is achieved by the physical separation of circuits into isolated chambers within the relay.
- The different voltage wiring connected to the relay must also be physically separated from each other. This is normally achieved by using separate cable channels.
- For relays mounted on printed circuit boards the appropriate distance between the tracks connected to low voltage and the tracks connected to other voltages must be achieved. Alternatively, earth barriers can be interposed between hazardous and safe parts of the circuitry.

Although this appears quite complex, with the SELV capability/options offered by some Finder relays, the user only needs to address the two last points. And, when using a socket where the coil and contact connections are on opposite sides, the separation of wiring into different cable channels is greatly facilitated.

General technical data

Cycle: The operate and subsequent release of a relay. Over a cycle, the coil is energised and de-energised, and a (NO) contact will have progressed through a cycle of making circuit, through to breaking the circuit, back to the point at which it is just about to re-make the circuit.

Period: The time taken by one cycle.

Duty factor (DF): During cyclic operation, the Duty Factor is the ratio between the time the relay is energized, to the time taken for one cycle (ie the Period). For continuous duty, the DF =1.

Continuous operation: This would represent the condition where the coil is permanently energized, or is energized for at least sufficient time for the relay to reach thermal equilibrium.

Mechanical life: This is derived from a test performed by energising the coils of several relays at 5 to 10 cycles per second without any load applied to the contacts. It establishes the ultimate durability of the relay where electrical wear of the contacts is not an issue. The maximum Electrical Life may therefore approach the Mechanical Life where the electrical loading of the contacts is very small.

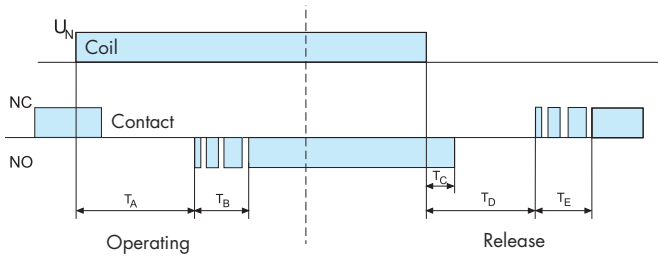
Operate time: The typical time (average of values measured supplying the relay coil with the nominal DC voltage) for the NO contact to close, from the point of coil energisation. It does not include the bounce time (see following pattern).

Release time

- For CO relays: The typical time (average of values measured removing from the coil the DC voltage) for the NC contact to close, from the point of coil de-energisation. It does not include the bounce time.
- For NO relays: The typical time (average of values measured removing from the coil the DC voltage) for the NO contact to open, from the point of coil de-energisation. It does not include the bounce time.

Note: The release time will increase if a suppression diode in parallel with the coil is employed (either in the form of; a coil protection module; integrated option within the relay; or mounted directly on the pcb).

Bounce time: The typical time duration (average of values measured) while closing contacts bounce, before attaining a stable closed state. Different values generally apply to NO and NC contacts.



T_A Operate time
T_B Bounce time for NO contact
T_C Release Time (NO relays)
T_D Release Time (CO relays)
T_E Bounce time for NC contact

Ambient temperature: The temperature of the immediate area where the relay is located. It will not necessarily correspond to the ambient temperature either within, or external to, the enclosure in which the relay is located.
To accurately measure the ambient temperature with respect to the relay, remove the relay from its location whilst maintaining the worst-case energisation of all the other relays and components within the enclosure or panel. Measuring the temperature at the position vacated by the relay will give the true ambient temperature in which the relay is working.

Ambient temperature range: The temperature range over which, operation of the relay is guaranteed (under prescribed conditions).

Storage temperature range: This can be taken as the ambient temperature range, with the upper and lower limits extended by 10 °C.

Environmental protection: according to EN 61810-1
The RT categories describe the degree of sealing of the relay case:

Environmental protection category	Protection
RT 0 Unenclosed relay	Relay not provided with a protective case.
RT I Dust protected relay	Relay provided with a case, which protects its mechanism from dust.
RT II Flux proof relay	Relay capable of being automatically soldered without allowing the migration of solder fluxes beyond the intended.
RT III Wash tight relay	Relay capable of being automatically soldered and subsequently undergoing a washing process to remove flux residues without allowing the ingress of flux or washing solvents.
Special application categories	
RT IV Sealed relay	Relay provided with a case which has no venting to the outside atmosphere.
RT V Hermetically sealed relay	Sealed relay having an enhanced level of sealing.

Protection category: according to EN 60529.
The first digit is related to the protection against the intrusion of solid foreign objects into the relay, and also against access to hazardous parts. The second digit relates to the protection against ingress of water. The IP category relates to the relay, when used normally in relay sockets or PC boards.
For sockets, IP20 signifies that the socket is "finger-safe" (VDE0106).
IP Examples:
IP 00 = Not protected.
IP 20 = Protected against solid foreign objects of 12.5 mm Ø and greater. Not protected against water.
IP 40 = Protected against solid foreign objects of 1 mm Ø and greater. Not protected against water.
IP 50 = Protected against powder (ingress of dust is not totally prevented, but dust shall not penetrate in a quantity to interfere with satisfactory operation of the relay). Not protected against water.
IP 51 = As IP 50, but with protection against vertically falling drops of water.
IP 54 = As IP 50, but with protection against spayed from all directions – limited ingress permitted.
IP 67 = Totally protected against powder (dust-tight) and protected against the effects of temporary immersion in water.

Vibration resistance: The maximum level of sinusoidal vibration, over the specified frequency range, which can be applied to the relay in the X-axis without the opening (for more than 10 µs) of the NO contact (if the coil is energised) or NC contact (if the coil is not energised). (The X-axis is the axis through the plane of the relay face containing the relay terminals). The vibration resistance is usually higher in the energised state, then in the non-energised state. Data for other axes and frequency ranges, on request. The level of vibration is given in terms of the maximum acceleration of the sinusoidal vibration,"g" (where g = 9.81 m/s^2). But note: the normal testing procedure according to IEC 60068-2-6 prescribes to limit the maximum peak-to-peak displacement in the lower range of frequencies.

Shock resistance: The maximum mechanical shock (half-sine 11ms waveform) permitted in the X-axis without contact opening > 10 µs. Data for other axes on request.

Installed orientation: The component's specification is unaffected (unless expressly stated otherwise) by its orientation, (provided it is properly retained, eg by a retaining clip in the case of socket mounted relays.)

Power lost to the environment: The value of the power lost from the relay with the coil energised (without contact current, or with full rated current through all NO contacts). This may be used in the thermal design and regulation of the control panel.

Recommended distance between relays mounted on printed circuit boards: This is the minimum mounting distance suggested when several relays are mounted on the same PC board. Care and consideration shall be given to ensure that other components mounted on the PC board do not heat the relay and raise its microenvironment beyond the permitted maximum ambient temperature.

Torque: The maximum value of torque that can be used for tightening terminal screws, according to EN 60999, is 0.4 Nm for M2.5 screws, 0.5 Nm for M3 screws, 0.8 Nm for M3.5 screws, 1.2 Nm for M4 screws. The test torque is indicated in the catalogue. Normally a 20% increase of this value is acceptable.
Both slot-head and cross-head screwdrivers can be used.

Minimum Wire size: For all types of terminal, a minimum cross-section of 0.2 mm^2 is permitted.

Max. wire size: Maximum cross-section of cables (solid or stranded wire, without ferrules) that can be connected to each terminal. For use with ferrules, the wire cross-section has to be reduced (e.g. from 4 to 2.5 mm^2, from 2.5 to 1.5 mm^2, from 1.5 to 1 mm^2).

Terminating more than one wire: EN 60204-1 permits 2 or more wires to be terminated in the same terminal. All Finder products are designed in such a way that each terminal can accept 2 or more wires, except screwless terminals.

Box clamp: wires are terminated within a box shaped clamp. Effective retention of solid, stranded and "bootlace" wires, but not suitable for wires terminated with "fork" style terminations.

Plate clamp: wires are terminated under the pressure of a clamp plate. Effective for "fork" terminated wires and solid wire, but less so for stranded wire.

Screwless terminal (Spring clamp): wires are terminated under the pressure of a spring clamp. The clamp being temporarily held open by the insertion of a tool, while the wire is inserted.

SSR – Solid State Relay

SSR Solid State Relay: A relay utilising semiconductor technology, rather than electromechanical. In particular, the load is switched by a semiconductor and consequently these relays are not subject to burning of contacts and there is no migration of contact material.
SSRs are capable of very high speed switching and virtual unlimited life. However, SSRs for switching DC are polarity sensitive and consideration must given to the maximum permitted blocking voltage.

Opto-coupler: For all SSR relays in the catalogue, the electrical isolation between Input and Output circuits is provided by the use of an opto-coupler.

Switching voltage range: The minimum to maximum (nominal) range for the load voltage. (The maximum value can be extended to cover the normal upper tolerance expected for the load voltage supply.)

Minimum switching current: The minimum value of load current necessary to ensure correct switch-on and switch-off action.

Control current: The nominal value of input current, at 23 °C and with rated voltage applied.

Maximum blocking voltage: The maximum level of output (load) voltage that the SSR can withstand.

Relay with forcibly guided (mechanically linked) contacts, or safety relay

A relay with forcibly guided contacts is a special type of relay which must satisfy the requirements of a very specific safety EN standard.
Such relays are used within safety systems to guarantee their operational safety and reliability, contributing to a safe working environment.

Such relays must have at least one NO and one NC forcibly guided contact. These contacts must be mechanically linked, such that if one of the contacts fails to open, the other is prevented from closing (and vice versa).
This requirement is fundamental in order to identify with certainty the non-correct operation of a circuit. For example, a failure of a NO contact to open (for example, by welding closed) is identified by the failure of the NC from closing, thereby signaling an operational anomaly. Under such circumstances, the standard requires a guaranteed contact gap of 0.5 mm to be maintained.

EN 50205 is the standard that establishes the requirements for relays with forcibly guided contacts, and it describes two types:
- Type A: where all the contacts are forcibly guided
- Type B: where only some contacts are forcibly guided

According to EN50205, in a relay with changeover contacts, only the NO of one pole and the NC of the other pole can be considered as forcibly guided contacts. In the case of the 50 series relay this means the remaining poles cannot be considered as forcibly guided and therefore this relay is categorised as "Type B".
However, since the 7S relay series offer only NO and NC contacts they can be categorized as "Type A".

Monitoring and Measuring relays

Supply voltage monitoring: The supply voltage being monitored also provides the operating power for the unit, so an auxiliary supply is not necessary. (Not applicable to the Universal voltage monitoring relay 71.41)

3-phase asymmetry monitoring: In a 3-phase system, asymmetry is present if at least one of the three L - L voltage vectors fails to be at 120° with respect to the other L - L voltage vectors.

Detection level: For monitoring relays, this represents, either fixed or adjustable level(s) of voltage, current or phase asymmetry, which define the acceptable limits of operation. Values outside acceptable limits will cause the output relay NO contact to open (after any intentional delay).

Switch-on lock-out time: for over and under voltage monitoring relays this is a selectable time delay to ensure that the output relay cannot re-energise too quickly (following a trip and the re-establishment of healthy conditions). Protects equipment where a quick succession of restarts might cause overheating and damage. Same delay applies immediately following "power-on".

Start delay (T2): Current monitoring relay 71.51; immediately on the detection of current flow (following a period of no current flow) "out of limits" current detection is inhibited for time period T2. Useful for ignoring inrush currents that commonly occur at switch-on of sodium lamps or motors etc.

Switch-off time: This refers to the time taken for the output relay to de-energise, following the detection of conditions requiring this. Depending on the particular monitoring relay, a short time may be demanded (ie. <0.5 secs – 72.31), or in the case of the 71.41 a longer delay may be preferred (ie, variable 0.1 to 12 secs). In the case of the latter, this delay is useful for ignoring momentary or short-term excursions of the measured/monitored value outside of limits.

Trip on-delay: Similar in effect to the switch-off delay, this delays the "trip" signal that would result in the output relay switching off. The term is used primarily for monitoring relays which monitor and act according to several parameters. But the effect is the same, and momentary or short-term excursions of the measured/monitored values outside of limits are ignored.

Run-on time: With liquid level control relays the pump motor can be turned on (or off) within 0.5 to 1 second of the liquid reaching or departing the level of the electrode. Depending on model, this delay can be increased up to 7 seconds, which will have the effect of the liquid level running past the electrode level. This can help prevent "hunting" of the motor, which might otherwise have happened due to ripples, or foam, on the surface of the liquid.

Reaction time: For monitoring relays, this is the maximum time taken by the electronics to respond to changes in the monitored value.

Fault memory: For monitoring relays; selecting this function will inhibit the automatic reset following clearing of fault condition. Reset can only be made by positive intervention.

Fault memory - status retained on power down: As above but the fault memory status will be retained during power down.

Switch-ON hysteresis: For monitoring relays type 71.41 and 71.51, the switch-on level can be off-set from the set level by a (hystereis) percentage. The desired percentage can be selected during relay set-up.

Thermistor temperature sensing: Over-temperature monitoring via a PTC resistance sensor, with in-built checking for sensor open or short circuit faults.

Level control relay: Detects the level of conductive liquids by measuring and evaluating the resistance between either 2 or 3 level electrodes.

Electrode voltage: For level control relays, this is the nominal voltage between electrodes. Note: this voltage is an alternating voltage, so as to avoid the effects of electrolytic corrosion.

Electrode current: For level control relays, this is the nominal (AC) electrode current.

Max. sensitivity: For level control relays: the maximum sensitivity is the maximum resistance between the electrodes that will be recognised as indicating the presence of liquid. This may be fixed, or adjustable over a range - according to type.

Sensitivity, fixed or adjustable: The resistance value between the electrodes B1-B3 and B2-B3 is used to determine if there is a conductive liquid between the electrodes. The sensitivity is either a fixed level (type 72.11) or an adjustable value (type 72.01). The latter is useful for "tuning out" any false detection of the fluid level arising from detecting surface foam (or head), rather than the liquid itself.

Positive safety logic: Positive logic means that the make contact is closed, if the level or parameter which is being monitored lies within the target range. The make contact opens, after a delay if appropriate, if the level falls outside of the target range, or level.

Timers

Specified time range: the minimum and maximum limits of, one or more time ranges, over which it is possible to set the desired time.

Repeatability: The difference between the upper and lower limits of a range of values taken from several time measurements of a specified time relay under identical stated conditions. Usually repeatability is indicated as a percentage of the mean value of all measured values.

Recovery time: The minimum time necessary before re-starting the timer function - in order to maintain the defined timing accuracy.

Minimum control impulse: The minimum duration of a control impulse (Terminal B1) necessary to ensure the complete and proper time function.

Setting accuracy: The difference between the measured value of the specified time and the reference value set on the scale.

Light dependent relays

Threshold setting: The ambient light level setting, measured in lux (lx), at which the output relay switches on (following the elapse of the ON Delay time). This is adjustable over the range specified in the specification.
The relay will switch off, dependent upon the type of Light dependent relay used, at either the same or a higher brightness value (following the elapse of the OFF Delay time).

Delay time: switching ON/OFF For light-dependent relays this is an intentional delay in the response of the output relay, following a change of state within the electronic light sensitive circuit (usually indicated by change of state of an LED).
This is to eliminate the possibility of the output relay unnecessarily responding to a momentary change in ambient light level.

Time switches

1 or 2 pole output types: The 2 pole output type (12.22) can have both contacts programmed independently of each other.

Type of time switch:
Daily The programmed operational sequence of the time switch repeats itself daily.
Weekly The programmed operational sequence of the time switch repeats itself weekly.

Programs: For electronic digital time switches, this is the maximum number of switching times that can be stored in memory. A switching time can be used for more than one day (ie. It could apply to Mon, Tues, Wed, Thurs and Friday), but will only use one memory location.
For mechanical daily time switches, this is the maximum number of switching points during the day that can be set.

Minimum interval setting: For time switches, this it is the minimum time interval that can be programmed.

Power back-up: The time, following a power failure, over which the time switch will retain the stored programs and the elapsed time information.

Step relays and staircase timers

Minimum/Maximum impulse duration: For step relays there is a minimum and a maximum time period for coil energisation. The former is necessary to ensure a full and complete mechanical step action, while exceeding the latter would result in coil overheating and damage.
With the electronic staircase timer, there is no limit to the maximum time for impulse duration.

Max. number of illuminated push-buttons: For step relays and staircase switches, this is the maximum number of illuminated push-buttons (having current absorption < 1mA @ 230 V AC) that can be connected without causing problems. If the push-button consumption is higher than 1 mA, the maximum number of push-buttons allowed is proportionally reduced. (ie. 15 push-buttons x 1 mA is equivalent to 10 push-buttons x 1.5 mA).

Glow wire conformity according to EN 60335-1

European standard EN 60335-1:2002, "Household and similar electrical appliances - Safety - Part 1: General requirements"; Paragraph 30.2.3 prescribes that insulated parts supporting connections that carry current exceeding 0.2 A (and the insulated parts within a distance of 3 mm from them), must comply with the following 2 requirements with respect to resistance to fire:

1. GWFI (Glow Wire Flammability Index) of 850 °C - Compliance with glow wire flammability test at 850 °C (according to EN 60695-2-12: 2001).

2. GWIT (Glow Wire Ignition Temperature) of 775 °C according to EN 60695-2-13:2001 - This requirement can be verified with a GWT (Glow Wire Test according to EN 60695-2-11: 2001) at a value of 750 °C with a flame extinction within 2 seconds.

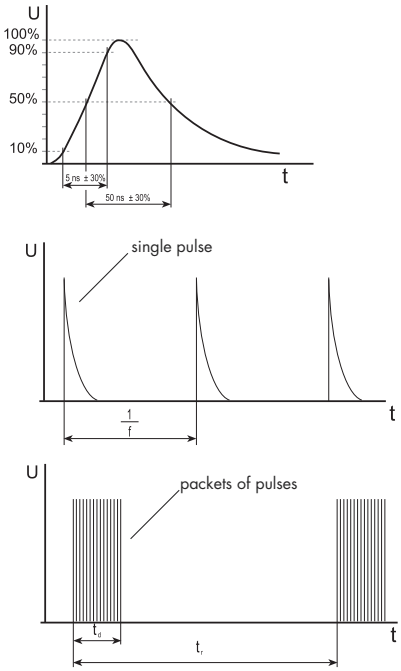
The following Finder products comply with the above mentioned requirements;
- electromechanical relays of series **34, 40, 41, 43, 44, 45, 46, 50, 55, 56, 60, 62, 65, 66**
- PCB socket types **93.11, 95.13.2, 95.15.2, 95.23.**

Important note: Whilst EN 60335-1 permits the application of an alternative needle flame test (if the flame during test no. 2 burns longer than 2 seconds) this can result in some limitation in the relay's mounting position. Finder products however, have no such limitations, since the materials used do not require the alternative test method to be performed.

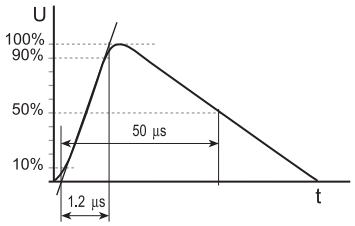
EMC (ElectroMagnetic Compatibility) Standards

Type of test	Reference standard
Electrostatic discharge	EN 61000-4-2
Radio-frequency electromagnetic field (80 ÷ 1,000 MHz)	EN 61000-4-3
Fast transients (burst) (5-50 ns, 5 kHz)	EN 61000-4-4
Surges (1.2/50 µs)	EN 61000-4-5
Radio-frequency common mode disturbances (0.15 ÷ 80 MHz)	EN 61000-4-6
Power-frequency magnetic field (50 Hz)	EN 61000-4-8
Radiated and conducted emission	EN 55011 / 55014 / 55022

In panel installations, the most frequent and, particularly, more dangerous type of electrical disturbances are the following:
1. **Burst** (fast transients). These are packets of **5/50 ns** pulses, having high peak voltage level but low energy since individual pulses are very short - 5 ns rise time (5 x 10^{-9} seconds) and 50 ns fall time.
They simulate the disturbances that can spread along the cables as a consequence of commutation transients from relays, contactors or motors. Usually they are not destructive, but they can affect the correct working of electronic devices.



2. **Surge** (voltage pulses). These are single **1.2/50 µs** pulses, with energy much higher than bursts since the duration is considerably longer - 1.2 µs rise time (1.2 x 10^{-6} seconds) and 50 µs fall time.
For this reason they are very often destructive. The Surge test typically simulates disturbances caused by the propagation of atmospheric electrical storm discharges along electrical lines, but often the switching of power contacts (such as the opening of highly inductive loads) can cause disturbances that are very similar, and equally destructive. The test levels **V** (peak values of the single pulses) are prescribed in appropriate product standards:



- **EN 61812-1** for electronic timers;
- **EN 60669-2-1** for electronic relays and switches;
- **EN 61000-6-2** (generic standard for immunity in the industrial environment) for other electronic products for industrial application;
- **EN 61000-6-1** (generic standard for immunity in the domestic environment) for other electronic products for domestic application.

Finder electronic products are in accordance with European EMC Directive **2004/108/EC** and indeed, have immunity capabilities often higher than the levels prescribed in the above mentioned standards. Nevertheless, it is not impossible that some working environments may impose levels of disturbances far in excess of the guaranteed levels, such that the product could be immediately destroyed!
It is therefore necessary to consider Finder products as not being indestructible under all circumstances. The user should pay attention to the disturbances in electrical systems and reduce as much as possible these disturbances. For example, employ arc suppression circuits on the contacts of switches, relays or contactors which otherwise might produce over-voltages when opening electrical circuits (particularly highly inductive or DC loads). Attention should also be paid to the placement of components and cables in such a way as to limit disturbances and their propagation.

EMC rules: Require that it is the equipment designer who must ensure that the emissions from panels or equipment does not exceed the limits stated in EN 61000-6-3 (generic standard for emission in the domestic environment) or 61000-6-4 (generic standard for emission in the industrial environment) or any product specific harmonised EMC standard.

Reliability (MTTF & MTBF for equipment)

MTTF - Mean Time To Failure: The predominant failure mode for elementary relays is attributable to the wear-out mechanism affecting the relay's contacts. This can be expressed in terms of MCTF (Mean Cycles To Failure).
With knowledge of the frequency of operation (cycling rate) of the relay within the equipment, the number of cycles can be simply transformed into a respective time, giving the effective MTTF value for the relay in that application. See B10 description below for information on how to estimate the MCTF for Finder relays.

MTBF - Mean Time Between Failures Relays are generally considered to be non-repairable items and consequently would require replacement following failure. Consequently, if a worn relay within equipment were replaced, its MTTF value would be appropriate in calculating the MTBF (Mean Time Between Failure) for the equipment.

B_{10} - Statistical 10% fractile of lifetime: The electrical contact life for a Finder relay, as indicated by its associated "F" chart, can be taken as the relay's B_{10} statistical life figure. This being the expected time at which 10% of the population will fail. There is a relationship between it and the MCTF value, and generally for a Finder relay this is approximately MCTF = 1.4 x B_{10}. See Electrical life "F-chart" section for more information.

The RoHS & WEEE directives

Recent directives approved by the European Union aim to reduce potentially hazardous substances contained in electrical and electronic equipment - minimising risks to health and the environment, and guaranteeing the safe reuse, recycling or ultimate disposal of equipment.

RoHS Directive
As of 1 July, 2006, European directive 2002/95/CE dated 27 January 2003 (known as the RoHS directive - "Restriction of Hazardous Substances") and its amendments 2005/618/EC, 2005/717/EC, 2005/747/EC limits the use of substances, considered potentially damaging to human health if contained in electrical and electronic equipment. Restricted materials:
- **Lead**
- **Mercury**
- **Hexavalent chromium**
- **PBB** (Polybromide biphenyl)
- **PBDE** (Polybromide diphenyl ether)
- **Cadmium** (With certain exceptions, including contact materials)

Scope of applications subject to the RoHS & WEEE directives

Categories of electrical and electronic equipment covered by the directives
- Large household appliances
- Small household appliances
- IT and telecommunications equipment
- Consumer equipment
- Lighting equipment
- Electrical and electronic tools (with the exception of large-scale stationary industrial tools)
- Toys, leisure and sports equipment
- Automatic dispensers
- (WEEE only) Medical devices (with the exception of all implanted and infected products)
- (WEEE only) Monitoring and control instruments (for example control panels)

Conformance of Finder products to the RoHS directive

Following a transitional period from December 2004 to June 2006, all Finder products manufactured since the latter date are fully RoHS complaint.

CADMIUM
Following the European Commission decision 2005/747/EC dated 21st October 2005, cadmium and its compounds are now permitted in electrical contacts. Consequently, relays with AgCdO contacts are acceptable in all applications. However, if required, the majority of Finder relays are currently available in "Cadmium-free" versions (for example, AgNi or $AgSnO_2$). But, it should be noted that AgCdO achieves a particularly good balance between the electrical life and the switching capacity of, for example, solenoids and inductive loads in general (particularly DC loads), motor loads and higher power resistive loads. Alternative materials such as AgNi and $AgSnO_2$, do not always offer the same performance for electrical life as AgCdO, although this depends on both the type of load and application (see Table 5 under Contact specification section).

WEEE directive
European directive 2002/96/CE dated 27 January 2003 (known as the WEEE directive - "Waste Electrical and Electronic Equipment") contains measures and strategies for the safe and environmentally sound disposal of waste derived from electrical equipment. (This directive is not directly applicable to Finder products as it applies to equipment, rather than components).

S I L and P L categories

S I L and P L categories relate to the statistical reliability of Safety Related Electrical Control Systems (SRECS), and not directly to components, such as relays, used in such systems.

It is therefore not possible, or appropriate, to quote a PL or SIL class against a relay. SIL and PL categories relate only to the SRECS and can only be calculated by the system designer.

However, the following section may be useful for those engineers incorporating Finder relays into SRECS systems.

S I L Classes - according to EN 61508

EN 61508:2 describes the requirements for security of Safety Related Electrical/electronic/programmable Control Systems (SRECS). It is a "sector independent" wide ranging standard - describing some 350 aspects that need to be considered in order to define the safety and performance required from such as system.

The S I L (Safety Integrity Level) classifies, as one of 4 classes (SIL 0 to SIL 3), the dangers and risks that would be consequential to a particular application malfunctioning. This in turn generates the need for any associated SRECS to perform with an appropriate level of reliability. Applications, where the consequences of a failure of the control system are assessed as low (SIL 0) can tolerate a relatively high statistical probability of a control system failure occurring.
Conversely, applications where the dangerous consequences of a failure of the control system are assessed as very high (SIL 3) cannot tolerate anything other than a control system with the highest (statistically assured) reliability.
The reliability of the (overall) control system is specified in terms of the „Statistical probability of a dangerous system failure per hour".
Note: EN61508 is not a prescribed standard under the EU Machinery Directive because it is primarily intended for complex systems such as chemical plants and power stations, or for use as a generic standard for other applications.

P L Classes - according to EN 13849-1

EN 13849-1 is specifically intended to cover machines and process plant.
Similar to EN 61508, this standard, classifies the danger and risks into one of five PL (Performance Level) classes. Described against each class is the required reliability for the (overall) control system, defined in terms of "statistical probability of a dangerous system failure per hour".

Points of commonality between EN 61508 and EN13849-1

The numeric values for the "statistical probability of a dangerous fault per hour" are to a large extent the same for EN 61508 and EN13849-1. SIL 1 corresponds to PL B & C, SIL 2 corresponds to PL D and SIL 3 corresponds to PL E.
Both EU standards define the statistical probability of a SERCS failure, and not the failure of a component. It is the responsibility of the system designer to ensure that a failure of a component does not compromise the required safety integrity of the system.

IEC EN 61508 (Safety Integrity Level)	"Statistical probability of a dangerous system failure per hour"	**EN 13849-1** (Performance Level)
No special safety requirements	$\geq 10^{-5} \ldots < 10^{-4}$	A
1	$\geq 3 \times 10^{-6} \ldots < 10^{-5}$	B
	$\geq 10^{-6} \ldots < 3 \times 10^{-6}$	C
2	$\geq 10^{-7} \ldots < 10^{-6}$	D
3	$\geq 10^{-8} \ldots < 10^{-7}$	E

Component reliability

The safety control system designer needs to take into account the reliability of components. Accordingly, the most predictable failure for a relay is contact wear-out at moderate to high contact loading. But, as relay reliability standard EN 61810-2:2005 emphasises, relays are not repairable, and this in particular needs to be taken into account when estimating the "statistical probability of a dangerous system failure per hour". See Reliability section.

Summary

- S I L and P L categorisation applies to systems and not to components.
- PL classes apply to machines and process plant, while SIL classes relate to more complex systems.
- EN 13849, with PL classifications, is expected to take effect from 2009 and will be mandatory, and as a consequence, component manufacturers will need to provide reliability data.
- For relays, the number of switching cycles before failure is predominantly determined by the life of the contacts, and consequently is dependent upon contact loading. The F-diagrams in the Finder catalogue can be regarded as indicating the B_{10} value of a Weibull type distribution of electrical life (for a 230 V AC1 load); from which the MCTF can be derived and used ultimately in calculating the "statistical probability of a dangerous system failure per hour" for the safety control system.
