

Introducing

HW Series Metal Bezel Pushbuttons and Switches

- *Industrial, heavy-duty appearance*
- *Complete compatibility with existing HW series components*
- *Simple part numbering system: Change HW1... to HW4...*
- *Equivalent metal bezel models available for all existing round HW plastic bezels*
- *See part numbers and pricing information on reverse*

In response to overwhelming customer demand, IDEC introduces a new addition to the HW Series of 22mm switches. The new HW4 models have the same great features as the present HW models but now feature nickel-plated aluminum bezels.

Metal bezels have a more rugged, industrial look and feel, which many customers prefer. Standard HW plastic bezel switches will continue to be available as well, to give you even more options to meet your needs.

Bright metal bezel switches will also stand out visually against darker backgrounds, which gives you more flexibility in your panel design. HW4 switches are compatible with all existing HW series components.

HW4 metal bezel models are available in round pushbutton styles with flush, extended and mushroom buttons, as well as E-stops, pilot lights, and selector switches. For a complete list of HW4 part numbers, see the chart on the reverse side.

Look for new literature on the HW4 series soon, or call IDEC Technical Support at extension 7528 for more information.
