

LB Series – Miniature Switches and Pilot Devices

Flush bezel projects only 2mm from front of panel. Standard bezel has a panel depth of only 27.9mm! Removable contact blocks are ideal for single board mounting.

Key features:

- Pushbuttons, selector switches, and key selector switches with up to 3PDT contacts.
- Key selectors with keys that are difficult to duplicate. Seven different key numbers to choose from.
- Black or metallic flush bezels available.
- Bright and clear LED illuminated face.
- Choice of either gold-clad or silver contacts.
- Degree of protection: IP65 (from the front of the panel)

Applicable Standards	Mark	File No. or Organization
UL508		UL Recognition No.E55996
CSA 22.2 No.14		CSA File No. LR 21451
EN60947-5-1		TÜV Rheinland
		EU Low Voltage Directive
GB14048.5		

Specifications

Operating Temperature	-25 to +60°C (no freezing) Illuminated units: -25 to +55°C
Storage Temperature	-30 to +80°C (no freezing)
Operating Humidity	45 to 85% RH (no condensation)
Contact Resistance	50 mW maximum (initial value)
Insulation Resistance	100 MW minimum (500V DC megger)
Dielectric Strength	Switch Between live part and ground: 2,000V AC, 1 minute Between terminals of different pole: 2,000V AC, 1 minute Between terminals of the same poles: 1,000V AC, 1 minute
	Illumination Between live part and ground: 2,000V AC, 1 minute
Vibration Resistance	Operating extremes/Damage limits: 5 to 55 Hz, amplitude 0.5 mm
Shock Resistance	Operating extremes: 100 m/s ² Damage limits: 1,000 m/s ²
Mechanical Life (minimum operations)	Momentary: 2,000,000 Maintained: 250,000 Selector switches: 250,000 Key selector switches: 250,000

Electrical Life (minimum operations)	Momentary: 50,000 / 100,000 ¹ Maintained: 50,000 / 100,000 ² Selector switches: 50,000 / 100,000 ² Key selector switches: 50,000 / 100,000 ²
Degree of Protection	IP65 (IEC 60529)
Terminal Style	Solder/tab terminal #110 PC board terminal
Bezel	Black plastic or metallic
Weight (approx.)	14g (illuminated pushbutton) 13g (pilot light) 13g (pushbutton) 15g (selector switch) 27g (key selector switch) 15g (illuminated pushbutton with guard) 14g (pushbutton with guard)

1. Switching frequency 1,800 operations/h.
2. Switching frequency 1,200 operations/h.

Contact Ratings

Gold Contact (switch base color: blue)

Rated Insulation Voltage	250V	
Rated Thermal Current	3A	
Rated Operating Voltage	30V DC	125V AC
Rated Operating Current (resistive load)	0.1A	0.1A
Contact Material	Gold-clad silver	

 Minimum applicable load (reference value): 5V AC/DC, 1 mA

Silver Contact (switch base color: gray)

Rated Insulation Voltage		250V			
Rated Operating Voltage		30V	125V	250V	
Rated Operating Current	AC 50/60Hz	Resistive load	—	5A	5A
		Inductive load	—	3A	1.5A
	DC	Resistive load	5A	1.1A	—
		Inductive load	2.5A	0.55A	—
	AC 50/60Hz	Resistive load	—	5A	3A
		Inductive load	—	3A	1.5A
	DC	Resistive load	3A	0.6A	—
		Inductive load	1A	0.22A	—
Rated Thermal Current		5A			
Contact Material		Silver			

 AC inductive load: PF=0.6 to 0.7 DC inductive load: L/R=7 ms max.

LED Ratings

Rated Voltage	5V DC	12V AC/DC	24V AC/DC
Voltage Range	5V DC±5%	12V AC/DC±10%	24V AC/DC ±10%
LED Part No.	LB9Z-LED5Ⓢ	LB9Z-LED1Ⓢ	LB9Z-LED2Ⓢ
Rated Current	A, R: 22 mA G, PW, S: 16 mA		
Voltage Rating	Marked on the side of the LED unit		
LED Life (reference value)	Approx. 30,000 hours (until the brightness reduces to 50% of the initial value)		
Internal Circuit	A, PW, R	A, PW, R	
			
Internal Circuit	G, S	G, S	
			

-  1. For Ⓢ (color code): A (amber), G (green), PW (white), R (red), S (blue)
 2. Use the white LED for yellow illumination.
 3. LED lamp contains a current-limiting resistor.

- For Standard Bezel part numbers specify:
 - Bezel shape in place of ①. 1 (round), 2 (square), 3 (rectangular)
 - Lens/LED color in place of ②. A (amber), G (green), PW (white), R (red), S (blue), Y (yellow)
- For Flush Bezel part numbers specify:
 - Bezel shape in place of ③. 6 (round), 7 (square), 8 (rectangular)
 - Lens/LED color in place of ④. A (amber), G (green), PW (white), R (red), S (blue), Y (yellow)
 - Bezel material in place of ⑤. M (metallic), Blank (black), G (black with guard)
- Solder/Tab terminals have silver contacts and PC Board Terminals have gold contacts.
- Illuminated pushbuttons contain an LED unit.
- See page 483 for dimensions.
- See page 496 for replacement LED units.
- Illuminated pushbuttons can be used with legend markings. Engraving can be done on a marking plate which is placed in the lens, or a clear film can be printed and placed in the lens. See page 498 for details on the marking plate and film.

Illuminated Pushbuttons (Sub-Assembled)

- 1. Key is retained at ● and removable at ○ positions.
- 2. Two keys are supplied.
- 3. For Standard Bezel part numbers specify bezel shape in place of ⊙. 1 (round), 2 (square), 3 (rectangular)
- 4. For Flush Bezel part numbers specify:
 - Bezel shape in place of ⊙. 6 (round), 7 (square), 8 (rectangular)
 - Bezel material in place of ⊕. M (metallic), Blank (black)
- 5. For Contact Operation, see page 481.
- 6. For dimensions, see page 490.
- 7. For additional security, wave keys also available.
 - Add the letter "S" before the "T" in the part no. Example: LB1K-31ST1A
 - Besides the standard wave key (key number 0H), six other keys are available.
 - To order other keys, specify the key number as shown below:
 - Example: LB1K-31ST2B-1H (Key number is indicated on the key cylinder. Standard keys do not have a key number indication.)
- (blank): Standard wave key (0H)
- 1H to 2H: Reversible wave key
- 3H to 6H: Non-reversible wave key
- 8. If ordering standard wave key (0H), subcomponents are available, see next page.
- 9. If ordering other than standard wave key (for example, key number 6H), only completed switches are available.

Terminal Blocks

Circuit Breakers

PC Board Drilling Layout (mm)

Notes for Designing PC Board and Circuit

1. Use 1.6-mm-thick glass epoxy PC board with drilled holes.
2. Design a circuit so that the LB series can operate within the rated voltage and current range. Make sure that inrush current and voltage do not exceed the rating.
3. Minimum applicable load is 5V AC/DC, 1mA on gold contacts.
4. Since the *2.8-mm-wide terminal touches the PC board as shown below , short circuit may occur with pattern lines. Design a circuit that prevents short circuits.

SPDT/DPDT Contacts

3PDT Contacts

PC Board Drilling Layout (Bottom View)

SPDT/DPDT Contacts

3PDT Contacts

1. When designing, note the alignment of the center lines of the contact blocks and operators.
2. The diameter of the terminal hole is ø1.2.
3. Hole diameter may vary to meet installation requirements. Determine the location and the size of the hole so that the locking lever can be operated.

LB Series Replacement LED Unit

Item	Rated Operating Voltage	Part Number	Ⓢ Color Code
LED Unit 	DC5V	LB9Z-LED5 [Ⓢ]	A G PW R S Specify color code in place of the Ⓢ in the part number. R: Red, G: Green, A: Amber, S: Blue, PW: White All illuminated LB series contain an LED unit. Use a white (PW) LED unit for yellow (Y) illumination.
	AC/DC12V	LB9Z-LED1 [Ⓢ]	
	AC/DC24V	LB9Z-LED2 [Ⓢ]	

Safety Precautions

- Turn off the power to the LB series control units before installation, removal, wiring, maintenance, and inspection. Failure to turn power off may cause electrical shocks or fire hazard.
- To avoid burning your hand, use the lamp holder tool when replacing the lamps.
- For wiring, use wires of a proper size to meet voltage and current requirements. Solder correctly according to the instructions in "Wiring" and "Notes on Terminal Cover." Improper soldering may cause overheating and create a fire hazard. Also, when using tab terminals, use receptacles of appropriate size.

Instructions

Wiring

1. Solder the terminals at 350°C within 3 seconds using a 60W soldering iron. Sn-Ag-Cu type is recommended. When soldering, do not touch the LB series with the soldering iron. Also ensure that no tensile force is applied to the terminals. Do not bend the terminal or apply excessive force to the terminal.
2. Use non-corrosive liquid flux.

Terminal Cover

Solder/tab terminal

Insert the terminal cover into the contact block with the TOP markings on the contact block and the terminal cover in the same direction.

Note: When wiring, insert the lead wires into the terminal cover holes before soldering. After wiring, terminal covers cannot be installed.

Standard Bezel

Flush Bezel

Operating Environment

- Do not use the LB series where corrosive gases exist or under an environment exceeding the operating temperature and humidity ranges. Otherwise, damages due to contact failure or change of surface color may occur.
- Major parts of the switch are plastic. Scratches or damages may occur when scraped with a sharp object or applied with excessive load or shock. Note that this may cause operation and appearance failure of the operator and bezel.
- Adherence of detergent, cutting oil, or special chemicals to the switch may result in operation failures and appearance failures such as change of surface color.

Handling

Contacts (micro switch)

When using NC (normally closed) and NO (normally open) contacts of the same microswitch, avoid connections of different voltages, or connections of different types of power supplies. Failure to observe this instruction may cause a short-circuit.

Removing and Installing the Contact Block

1. Turn the locking lever on the contact block in the direction opposite to the arrow on the housing. Then the contact block can be removed.
2. Insert the contact block with the TOP markings on the contact block and the operator placed in the same direction. Then lock the units, turning the locking lever in the direction of the arrow.

Panel Mounting

Remove the contact block from the operator. Insert the operator into the panel cut-out from the front, then install the contact block to the operator.

Standard Bezel

Flush Bezel

Notes on Mounting

Use the optional ring wrench (MT-001) to mount the operator onto the panel. Tightening torque should not exceed 0.7 N·m. Do not use pliers. Excessive tightening will damage the locking ring.

Replacing the Lens

Standard Bezel

From the opposite side of the TOP marking, remove the operator (lens, marking plate, and lens holder) using the optional lens removal tool (MT-101) by gripping the recesses of the color lens. Removing from the TOP side may damage the metallic bezel.

Removing the Operator (standard bezel)

Flush Bezel

From the opposite side of the TOP marking, push the tip of the flat screwdriver to the groove of the color lens and pull out the operator (lens, marking plate, lens holder).

Removing the Operator (flush bezel)

Replacing the Marking Plate

Remove the marking plate by pushing the lens from the rear to disengage the latches between the lens and holder, using the screwdriver as shown below.

Note: A transparent film inside the lens holder is attached to the unit to make it waterproof and cannot be removed.

2. Insert a marking plate into the color lens, and press the lens onto the lens holder to engage the latches. Pay attention to the orientation of the marking plate.

Lens Unit and Contact Block Installation

To insert the lens unit into the operator, press in the lens unit by making sure that the latch on the operator is aligned with the latch on the lens unit.

Standard Bezel

Flush Bezel

Marking Plates and Films

For illuminated pushbuttons and pushbuttons with illuminated lens, legends and symbols can be engraved on the marking plates, or printed film can be inserted under the lens for labelling purposes.

Marking Plate and Marking Film Size

Lens	Round	Square	Rectangular
Built-in Marking Plate			
Applicable Marking Film			
	<ul style="list-style-type: none"> • Engraving must be made on the engraving area within 0.5 mm deep. • The marking plate is made of white acrylic resin. 		
	<ul style="list-style-type: none"> • Film thickness: 0.1 mm per film • Marking film is not included. • Recommended marking film: Polyester film 		

Marking Plate and Film Insertion Order

The marking plate must be engraved on the specified side as shown above. Pay attention to the orientation of the marking plate.

Replacing the LED Unit

The LED unit can be replaced by pulling the lens unit out of the contact block.

Orientation of the LED unit

Insert the LED unit into the contact block with the TOP markings on the contact block and LED unit in the same orientation.

Notes on replacing the LED Unit

- When replacing the LED unit, make sure that static electricity is not applied.
- Make sure that the LB series has cooled down before replacing the LED unit.
- To avoid getting burned, be careful not to touch the unit while it is still hot.

Notes on Using Quick Connect Terminals

1. Use #110 tab quick connects, 0.5 mm-thick.
2. When connecting the terminals on the left and center, make sure that surfaces of the quick connects face each other. Otherwise, a short-circuit may occur.

3. Apply only horizontal force against the panel to the tab. The switch may be damaged if a force other than a horizontal force is applied.

Installing Rubber Boots

When using the switches in environments subject to splashing water or an excessive amount of dust, make sure to use an optional rubber boot.

As shown in the drawing below, ① remove the gasket from the operator, and ② attach the rubber boot from the front (button side).

Standard Bezels

For rectangular and square units, pull out the seals of the rubber boot and place them around the operator sleeve as shown below. Make sure that the seals are not twisted or tucked inside and that the gasket is removed, otherwise water-proof and dustproof characteristics are not ensured.

How to Install the Rubber Boot

Rectangular

Square

Round

Flush Bezels

Mount the rubber boot so that the protrusion at the bottom surface of the operator fits with the recess on the operator, placing the rubber boot all around the operator sleeve.

Make sure that the protrusion on the rubber boot and the recess on the operator fits correctly, otherwise, the waterproof and dustproof characteristics are not ensured.

How to Install the Rubber Boot

Note: Install the rubber boot before mounting the unit to the panel.

Maintained Pushbuttons

Do not replace the buttons when the pushbutton is in the maintained position. Replacing the button in the maintained position may damage the internal mechanism. Also, do not remove the contact block with the button in the maintained position. The contact may not operate properly when the contact block is remounted.

Pushbuttons and Illuminated Pushbuttons with Switch Guard

Do not apply force to the switch guard when the switch guard is not attached to a panel. When opening the switch guard, do not open more than 180°. The hinge may break.

Selector Switches

When turning the operator or key, make sure that they are turned to the correct position.

Selector Switches with Key

Observe the following instructions to prevent malfunction or damage.

- Do not remove the key from any key retained position.
- In addition to the standard key (key number 0H), six other key numbers are available. Use a key of the matching number with the key cylinder. The standard key does not have a key number indication.
- Keys are available in two types. Key numbers 0H (standard), 1H, and 2H are reversible keys which can be inserted in two ways. Key numbers 3H, 4H, 5H, and 6H are non-reversible keys. Make sure of correct insertion direction.

Single Board Mounting

The IDEC LB series is available for single board mounting.

Installing and Removing Contact Blocks

Turn the locking lever to install and remove contact blocks on a PC board using a screwdriver from a hole in the PC board.

Determine the location of the switches so that the locking lever can be operated.

Mounting Holes and Assembly Procedure

Drill mounting holes in the panel as shown below. When the units are mounted collectively, provide adequate clearance.

3PDT Contacts

45 mm minimum for switches with guard

Assembly Procedure

1. Install the operator to the panel.
2. Mount the contact block to the operator from the back of the panel.
3. Turn the locking lever to lock the contact block.
4. Insert a PC board and solder.

Notes:

1. Make sure that each terminal is inserted into the PC board correctly.
2. Do not apply tensile force to the connector cable for an extended period of time.
3. Do not expose the contact block to water.
4. Ensure to lock contact blocks when the contact blocks are installed on the operators.
