Cable Management Spool for Vertical Rack Managers *FRCMSPOOL Series*

Toolless cable spool designed to manage slack and maintain proper bend radius in vertical cable managers.

Key Features and Benefits

- Heavy-duty extruded aluminum spool with steel end caps provides durable support for cable slack in high-density environments.
- Toolless mounting design allows fast installation at the rear of vertical managers without additional hardware.
- Maintains proper cable bend radius to protect fiber and high-performance copper cables and support reliable data transmission.
- Provides structured storage for slack cables, improving organization and reducing congestion.
- Supports routing and management of excess cable length in vertical cable pathways.
- Compatible with FRCM, VFM vertical cable managers and **HWF** rear pan.
- Supplied in pairs (2 units) for balanced cable management and installation flexibility.
- Black anodized finish with powder-coated steel end caps provides long-term durability.
- TAA-compliant, manufactured in North America supports government procurement requirements and ensures consistent quality.
- RoHS compliant construction supports environmental and regulatory requirements.

The FRCMSPOOL Series cable spools provide an effective solution for managing cable slack and maintaining proper bend radius within vertical cable management systems. Designed for use with FRCM and VFM managers, they install quickly without tools and create organized cable storage points within the rack.

By supporting excess cable length and controlling bend radius, these spools help protect fiber and high-performance cabling, improve routing efficiency, and enhance overall cable management in high-density environments.

	Overall Dimensions			Qty
Part No.	Spool Diameter	Bend Radius	Spool Length	Included
FRCMSPOOL	2.50	1.25	5.50	2
FRCMSPOOLD	2.50	1.25	11.00	2

Where the FRCMSPOOL Series Works Best

- High-density data center environments
- Network and telecom installations
- Fiber and structured cabling systems
- Multi-rack deployments using vertical managers
- Installations requiring slack management

Best Applications for the FRCMSPOOL Series

- Managing slack in fiber and copper cable installations
- Maintaining proper bend radius for sensitive cables
- Improving organization within vertical cable managers
- Reducing cable congestion and strain in dense environments
- Supporting structured routing in large-scale deployments
