# Pull-on lock function (D2D-2000 models)

When opening or closing the door, the power ON state of the Switch can be checked with the door left open when applying normal (momentary) operations. By closing the door after maintenance inspection, the Switch will resume the normal momentary operation. (This feature is ideal for conducting the electrical continuity test, inspection, repair, etc. on the Switch after its assembly.)

| To turn ON the power when the door is closed |       | ON    | OFF   |
| To turn OFF the power when the door is open  |       | OFF   | ON    |
| To turn ON the power with the door left open | Pull  | ON    | OFF   |

# Double Spring Mechanism (D2D-1000/3000 models)

Two return springs are provided for the pin plunger. Thus, if either of the springs is broken, this feature will prevent the Switch from malfunctioning or short-circuiting.

# Direct Contact Opening Mechanism (D2D-1000 models)

Pushing the plunger will effectively break the circuit on the NC side even if a contact weld occurs

Direct Contact Opening Mechanism is not available in NO connection.

# **Precautions**

### **★Please refer to "Basic Switches Common Precautions" for correct use.**

### **Correct Use**

### Mounting

 Apply operation force to the pin plunger in the direction it operates. Applying forces laterally or from an oblique direction may damage the pin plunger.

 Use M4 mounting screw with plane washers or spring washers to securely mount the Switch. Tighten the screws to a torque of 0.49 to 0.69 N·m {5 to 7 kg·cm}.

### Wiring

- It is recommended to use sleeve receptacles when connecting with the quick connect terminals.
- Insert the receptacle straight toward the terminal.
- Applying excessive external force horizontally or vertically may cause deformation of terminals and may damage the housings.

### **●Using Micro Loads**

Using a model for ordinary loads to open or close the contact of a micro load circuit may result in faulty contact. It is recommended to use the Switch in the operation range shown below. The minimum applicable load is the N-level reference value. This value indicates the malfunction reference level for the reliability level of 60% ( $\lambda$ <sub>60</sub>).

(JIS C5003)

The equation,  $\lambda_{60}$ =0.5×10<sup>-6</sup>/operations, indicates that the estimated malfunction rate is less than  $\frac{1}{2,000,000}$  operations with a reliability level of 60%.

<sup>2.</sup> The operating characteristics are for operation in the A direction ( **1**).
