

# Digital Panel Meters Programming Software Type UdmSoft

- Software to set all instrument's parameters on the UDM35 and UDM40 models
- Reading of instantaneous variable and alarms status
- Management of up to 255 single remote UDM's over a RS485 network (or of the single meter by the RS232)
- Management of an archive with various configurations

## Product description

Multi-language programming and reading software for all the working parameters of the UDM35 and UDM40 by RS232 or RS485 interface.

The software can be used with the most common operating systems such as: Windows 98/2000/XP.

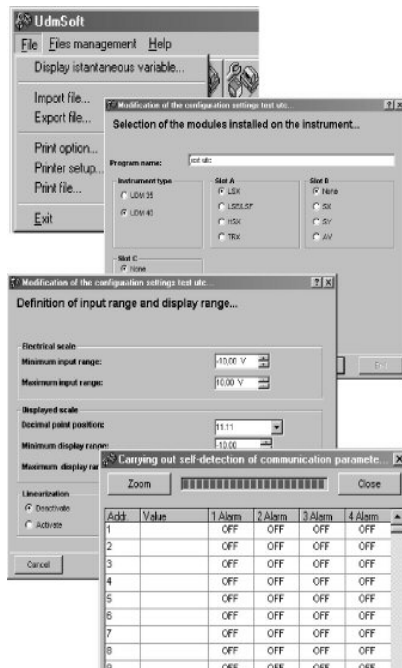

## How to order

**UdmSoft**

The software can be downloaded free of charge from Carlo Gavazzi's web site  
UCABLE (cable to communicate with the meter through the auxiliary serial communication port)  
UdmSoft-kit = UdmSoft + UCABLE

## General Specifications

### Programming menu

### Reading of instantaneous variables and meters

The UdmSoft manages an archive of configurations which may be easily recalled. A pre-set programming configuration can be downloaded and, if necessary, modified.  
The UdmSoft allows to create the needed configuration like the alarm setting, retransmission range setting, etc.

It allows the real-time displaying of all the variable value and the alarms status.

**NOTE:** the correct serial communication through RS485 can be carried out by means of our serial communication converter RS485/RS232 model SIUPC2 or RS485-RS232 to TCP/IP (virtual COM) model SIUTCP2, or RS485-RS232 to TCP-IP model SIUTCP3, or RS485 to USB model SIUPC3.
