

TECHNICAL CATALOG

SACE Emax 2

Low voltage power circuit breakers
ANSI C37 / UL 1066 / CSA standards

SACE Emax 2 UL

Consultation guide

Chapter 1

Main characteristics

Overview of the SACE Emax 2 family, distinctive features of the series, product conformity and service.

Chapter 2

The ranges

Electrical characteristics of automatic circuit breakers, switch disconnectors and derived versions.

Chapter 3

Protection trip units

Latest generation Ekip protection trip units for power distribution and generation.

Chapter 6

Accessories

Accessories for SACE Emax 2 circuit breakers (signaling, control, interlocks, etc..) and for Ekip protection trip units (connectivity, measurements, protection, etc).

Chapter 7

Installation

Installation and circuit breaker performance in switchgear, installation environment, degree of protection and limiting curves.

Chapter 8

Overall dimensions

Overall dimensions for fixed circuit breakers, withdrawable circuit breakers and accessories.

Chapter 4

Software functions

New generation of functionalities ready for every type of system and simple to use.

Chapter 9

Wiring diagrams

Circuit-breaker and accessories wiring diagrams.

Chapter 5

Supervision and connectivity

Supervision, Energy Management and complete integration in the systems with the possibility of communicating with several protocols and energy management via cloud.

Chapter 10

Ordering codes

Ordering codes with configuration examples.

Overview of the SACE Emax 2 family

SACE Emax 2, a further leap forward

The world of the electrical power distribution changes fast and major new trends such as energy efficiency, connectivity and smart grids are now crowding onto the stage. These trends lead to new customer and application demands. In order to meet these demands, ABB has further improved SACE Emax 2. SACE Emax 2 air circuit breaker is now a multifunctional platform able to manage the next generation of electrical plants such as microgrids, evolving into a true Power Manager. SACE Emax 2 is the first air circuit breaker that meets new grid requirements.

It enables a direct communication to the new energy management cloud-computing platform ABB Ability™ Energy and Asset Manager.

The smart and plug & play architecture makes SACE Emax 2 easy to use, cutting-edge connectivity capabilities creates a circuit breaker that is able to evolve during its lifecycle. Thanks to the ABB Ability Marketplace™ offering and the full portfolio of commissioning tools, it is possible to enhance the device, even when installed.

SACE Emax 2 sets a new circuit breaker benchmark for the needs of today and tomorrow.

Distinctive features

The evolution of SACE Emax 2 from circuit breaker to Power Manager continues, embedding more and more functionalities to become the all-in-one solution to help manage "low-voltage distribution systems".

Performance

The SACE Emax 2 range is made up of 4 sizes: E1.2, E2.2, E4.2 and E6.2 up to 6000A, which enable switchgear of compact dimensions and high ratings to be built with busbars of reduced length and cross-section.

The protection trip units, auxiliary connections and main accessories are the same throughout the range to simplify design and installation.

Furthermore, the sizes from E2.2 to E6.2 have the same height and depth.

The rating levels are updated and standardized throughout the sizes to meet the demands and needs of today's installations, from 42kA to 150kA, and to standardize switchgear projects.

High short-time currents, together with the efficiency of the protection functions, to provide complete selectivity in all situations.

Accurate design and choice of materials enable optimization of the overall dimensions of the circuit breaker. In this way switchgear of compact dimensions can be built to help deliver outstanding savings at the same performance.

Furthermore it can be ordered with a triple marking label, IEC, UL and CCC.

SACE Emax 2 air circuit breakers are certified for Class 1 active energy measurement in compliance with the IEC61557-12 standard. This permits it to satisfy highly demanding requirements of energy efficiency and to perfectly fit into SCADA systems thanks to a current detection proximal to 0.

Achieving maximum efficiency of an electrical installation requires intelligent management of power supplies and energy use. For this reason, the new technologies used in SACE Emax 2 circuit breakers allow the productivity and reliability of installations to be optimized, and at the same time, power consumption to be reduced while fully respecting the environment.

New advanced functionalities, together with Protection trip units and Communication and system devices contribute to make SACE Emax 2 the circuit breaker that maximizes efficiency in all low-voltage electrical installation.

Distinctive features

Control

SACE Emax 2 circuit breaker is the first single device ready to manage all the dynamics of a low-voltage electrical installation.

Managing loads in almost any condition is now possible thanks to Advanced Functionalities such as:

- Load shedding: fast load shedding to provide continuity for critical loads during black-outs. Typical scenario is when LV distribution is disconnected from the grid (MV).
- Power controller: patented algorithm to help reduce the peak of power consumed, allowing savings on electricity bills. Managing different power sources and connecting them to main grid is also crucial, so that service continuity is maximized.
- Embedded ATS functions: an automatic transfer switch system is used in applications where continuity is essential and where there are multi source supplies.
- Synchrocheck logics: Synchronization of voltage and frequency to allow plant reconnection to the Utility. SACE Emax 2 is able to act as a controller of Main grid condition, disconnecting a plant when necessary and adapting protection to on-grid or off-grid conditions.
- Adaptive protection: Network changes recognition and automatic set of thresholds to provide protection and coordination in on-grid and off-grid conditions.

Connectivity

SACE Emax 2 circuit breakers can be into all automation and energy management systems to help improve productivity, energy consumption and remote service.

All circuit breakers can be equipped with communication units for use with Modbus, Profibus, and DeviceNet™ protocols as well as the modern Modbus TCP, Profinet, EtherNet/IP™. The cartridge-type modules can be easily installed directly on the terminal box, even at a later date.

Furthermore, the integrated IEC61850 communication module enables connection to automation systems widely used in medium voltage power distribution to create intelligent networks (Smart Grids). All circuit breaker settings and functions are also accessible via Bluetooth, using EPiC mobile app. This remote connection allows a safer interaction with the device mitigating the risk of arc flash accidents.

Furthermore with an easy connection thanks to Ekip Com Hub module, SACE Emax 2 can be integrated in ABB Ability™ Energy and Asset Manager, exploiting all the capabilities of a cloud computing platform such as predictive maintenance, analysis and report download.

Distinctive features

Ease of use

The entire range is available in fixed and withdrawable versions, with double insulation between the front of the switchgear and the live parts to help ensure safe operation. The circuit breakers can be powered from the top or bottom terminal connections. All essential information is available in the central area of the front shield and helps enable immediate identification of the status of the circuit breaker: open, closed, ready to close, charged and discharged springs.

Maintenance is intended to be simple and safe.

Thanks to the new front cover design, the main accessories can be installed without completely removing the front cover.

The withdrawable circuit breaker is inserted and removed via dedicated guide rails that simplify movement. The correct movement from racked-in, test isolated, to racked-out position is provided by a lock in each position.

As a further expectation of safety, the shutters of the fixed part can be locked from the front when the circuit breaker is removed.

The shutters of the upper terminals are independent of those of the lower terminals to facilitate checking and maintenance operations.

The Ekip Touch protection trip units are equipped with a large color touch-screen display which helps enable safe and intuitive operation. Furthermore, the Ekip trip units can be accessed by means of smartphone, tablet or portable PC, thanks to enhanced connectivity capabilities and a full portfolio of commissioning tools. The improved electronics allows updating of the circuit breaker while in service during operation.

SACE Emax 2 is now able to evolve during the lifecycle thanks to dedicated software packages available on the ABB Ability Marketplace™. Upgrade and customize the circuit breaker has never been so easy. Thanks to the customization simplicity, communication modules installation ease and clear user interface, SACE Emax 2 is making the complex system ready for a new digital experience.

- Key
- 1 Trademark and size of circuit-breaker
 - 2 SACE Ekip protection trip unit
 - 3 Pushbutton for manual opening
 - 4 Pushbutton for manual closing
 - 5 Lever to manually charge closing springs
 - 6 Electrical rating plate
 - 7 Mechanical device to signal circuit breaker open “O” and closed “I”
 - 8 Signal for springs charged or discharged
 - 9 Mechanical signalling of overcurrent release tripped
 - 10 Size and serial number
 - 11 QR code

SACE Emax 2 is now equipped with a laser etched QR code located on the front of the circuit breaker allowing easy access to product data via smartphone.

By scanning the QR code directly from your smartphone the user will have access to:

1. Product datasheet including full list of factory installed accessories and relevant documentation
2. ABB Contact information.
3. Link to download ABB EPiC mobile app for monitoring and commissioning.

In addition, ABB's EPiC mobile app has been enhanced with the ability to scan the QR code in order to provide a consistent user experience across the platform.

Product conformity

The SACE Emax 2 circuit breakers and their accessories conform with ANSI C37.13, C37.16, C37.17 and C37.50 standards and are UL 1066 certified. The UL 1066 certification allows Emax 2 to be used in UL 1558 switchgear, UL 891 switchboards and CSA C22.2 no. 31 switchgear assemblies.

Approvals and certifications

The SACE Emax 2 family also includes a range that conforms to the international IEC 60947, EN 60947 (harmonized in 30 CENELEC countries), CEI EN 60947 and IEC 61000 Standards and complies with the following EC directives:

- “Low Voltage Directives” (LVD) no. 2014/35/EU
- “Electromagnetic Compatibility Directive” (EMC) no. 2014/30/EU.

The IEC range is also certified by the Russian certification body GOST (Russia Certificate of Conformity) and has achieved China CCC Certification (China Compulsory Certification).

The low-voltage electrical distribution plants inside the modern ship require continuous improvements in order to ensure always more safety and availability and ABB enriches its products with a new certification:

- **UL1066 SA (ACB):** ABB guarantees for the ACB the same working temperature of MCCBs in an ambient with inclination (30°) and vibrations certify in the UL1066 standard.

Certification of conformity with the above-mentioned product Standards is carried out in compliance with the European EN 45011 Standard by the Italian certification body ACAE (Association for the Certification of Electrical Equipment), which is recognized by the European organization LOVAG (Low Voltage Agreement Group), and by the Swedish Intertek SEMKO certification organization Intertek Semko which is recognized by the international organization IECEE.

The main versions of the devices are approved by the following shipping registers

Registro Italiano Navale

Quality and Sustainability: company efficiency and integrated management systems. Quality, Sustainability and Customer Satisfaction have always been ABB SACE's major commitment.

The involvement of all company departments and organization of processes have led ABB to develop, implement and certify management systems in compliance with international standards:

- ISO 9001 for quality management
- IRIS for the quality of supplies in the railway sector (International Railway Industry Standards)
- ISO 14001 for environmental management
- OHSAS 18001 for the management of the health and safety of employees in the workplace
- SA 8000 for the management of social responsibility.

The ABB SACE testing laboratory, accredited by ACCREDIA in compliance with the ISO/IEC 17025 Standard, provides both ABB and external customers with a qualified service of performing certification tests on devices and electric equipment of low and medium voltage in accordance with the relevant product Standards.

Thanks to the implementation of systems and their integration (Integrated Management System), ABB SACE, with a view to continuous improvement, has implemented processes with a focus on:

- quality, preventing defects and faults along the entire supply chain
- environment, reviewing production processes in terms of ecology and waste reduction, rationalizing the consumption of raw materials and energy, preventing pollution, containing noise emissions and reducing the quantity of rejects in the production processes
- health and safety of employees, offering a healthy and safe workplace in all of the various stages of work with a "zero accident objective"
- social responsibility, providing the respect of human rights and the absence of any discrimination throughout the supply chain, and offering a favourable and transparent working atmosphere.

A further commitment aimed at safeguarding the environment has been achieved by assessing products' life cycles (LCA, Life Cycle Assessment). This includes the assessment and improvement of the environmental performance of products from the engineering stage throughout their entire life cycle. The materials, processes and packaging used are chosen with a view to optimising the actual environmental impact of each product, including its energy efficiency and recyclability.

ABB Low Voltage Product Service

ABB's technical assistance service offers solutions aimed at supporting the customer in all stages of the lifespan of the circuit breaker in service and covering the entire chain of value; ABB is present from the moment of selection to the end of the life of the product, thereby providing the investments of its customers.

ABB supplies annual updates regarding the evolution of the circuit breaker ranges (Life Cycle Management) and for each product it provides details of associated services and the level of support available, so that customers can choose the products and spare parts best suited to their needs. ABB's organisation offers services that include installation and commissioning, technical training on the use and maintenance of products, the supply of original spare parts, corrective and preventive maintenance, equipment diagnostics, modernisation of systems with upgrades and retrofitting kits, consultancy services and personalised maintenance and service contracts. All this is supported by one of the most extensive global sales and service networks.

Retrofitting kit

Through continuous research targeted at the needs of the customer, ABB SACE Service has developed innovative retrofitting kits in order to simplify and speed up installation of a new circuit breaker, updating the customer's investment with the latest technology available and with very limited down times.

The retrofitting kit between Emax2 and Emax is a retrofit solution: it is therefore possible to replace the withdrawable version of Emax with an equivalent Emax2 model without changing the switchboard busbars, by simply removing the fixed part of Emax replacing it with a fixed part of Emax2 which has been suitably modified with dedicated terminals.

The ranges

- 2/2 SACE Emax 2 power circuit breakers UL 1066**
- 2/4 SACE Emax 2 switch disconnectors UL 1066**
- 2/6 SACE Emax 2 power circuit breakers multi-standard version IEC 60947, UL1066 and CCC**
- 2/8 SACE Emax 2 air switch disconnectors at 1500 V DC**

SACE Emax 2 air switch disconnectors at 1500 V DC

The SACE Emax 2 MS/DC-E range of switch-disconnectors covers 1500V DC installations in compliance with UL489B (for use with Photovoltaic systems) and UL489F (for use with Battery Power Supplies), with rated short-time current up to 100kA.

Sharing the same dimension as the standard Emax 2, these compact switch-disconnectors allow UL switchgear and inverters manufacturers to optimize their footprint.

Thanks to the factory-fitted shorting busbar (jumper) kits, all four poles can be connected in series to isolate a single polarity source, or alternatively for a dual polarity source 2 poles can be configured in series for the positive supply and the other 2 poles in series for the negative supply.

All products can be equipped with the most common UL listed mechanical and electrical accessories already available for the SACE Emax 2 air circuit-breaker range.

Introduction

SACE Emax 2 Ekip protection trip units are the new benchmark for the protection, measurement and control of low-voltage electrical systems.

The SACE Emax 2 trip units are designed to be used in a wide range of applications. This complete, flexible protection trip unit can be adapted to the actual level of protection required, independently of the complexity of the system.

The range is available for three levels of performances, to accommodate a wide variety of applications from basic to advanced.

- Ekip Dip, standard applications
- Ekip Touch and Ekip Hi-Touch, the smart trip units
- Ekip G Touch and Ekip G Hi-Touch, generator protection

The protection units for power distribution are available in the LI, LSI and LSIG versions, are suited to almost all distribution systems. These trip units are designed for a vast range of applications, to be used with transformers, motors and drives. Depending on the complexity of the system, voltage and energy measurements can be also included.

The Ekip G range enables the protection of generators without the use of external devices that require dedicated relays and wiring. These trip units help increase efficiency from the design phase to installation, minimizing the time needed for the realization and commissioning of the system. They also help ensure high levels of accuracy and reliability of all protection devices required for running generators in applications such as naval, GenSet or cogeneration.

Ekip Dip trip units

The first level of electronic trip units for the standard protection of AC systems, delivering high reliability and tripping precision. They provide protection against overloads, selective short-circuits, short-circuits and ground faults. The power required for their operation is provided directly from the current sensors.

Ekip Touch and Ekip Hi-Touch trip units

These represent the state of the art in terms of technology for AC network protection with advanced protection and system management

functions. Several communication protocols allow remote supervision of electrical systems and control the circuit breaker. Class 1 active energy measurement in compliance with IEC 61557-12 satisfies a high demanding requirements for energy efficiency. The integrated display offers an easy and intuitive experience to the user, while the new embedded Bluetooth technology allows fast interaction through EPiC mobile app.

New digital experience

The new Ekip Touch and Ekip Hi-Touch trip units help to provide maximum flexibility by offering a wide range of software solutions to always upgrade the circuit breaker. These functions can be selected when ordering the circuit-breaker or downloaded directly from the ABB Ability Marketplace™, even from a smart phone or tablet, thus reducing installation time to virtually zero.

Introduction

Ekip Touch/Hi-Touch trip units can be now customized.

—

Ekip Touch/Hi-Touch always allow the user to enjoy a new product experience thanks to the ability to build up a tailor-made trip unit by selecting the set of protections, measurements and logics.

Circuit-breakers' customization has never been so easy.

With the new Ekip Touch and Hi-Touch trip units, the most advanced functionalities can be enabled following two different purchasing processes:

- **ABB Ability Marketplace™**

Users can download digital upgrades via web and enable them directly on the trip unit, without removing the circuit-breaker from the installation point, with zero shipping time and no installation costs. This process allows additional functions to be selected after the trip unit has been already received on site and installed. Moreover, stock can be optimized by keeping in the warehouse few types of trip units and customizing them according to the customer's specific needs. Once purchased, each function can be easily activated by using a smartphone or tablet via EPiC app mobile and embedded Bluetooth connectivity, or a laptop through Ekip Connect 3.

- **Traditional ordering**

This option represents the standard way to order ABB devices. The traditional process allows the users to select and have installed the desired functions when ordering the circuit-breaker. Once received and installed, SACE Emax 2 always offers the possibility to add new functionalities via ABB Ability Marketplace™.

The new Ekip digital offering includes:

- **Packages**

The software packages offer the possibility to customize the circuit-breaker by selecting additional protection functions and measurements. The device can be customized to create tailor-made solutions according to the specific application. Maximum flexibility is provided by offering specific technical features that can be combined in the Ekip Touch/Hi-Touch during the product life cycle.

- **Solutions**

The SACE Emax 2 circuit-breaker is no longer intended as a simply stand-alone protection device; it has become an active player in the electrical system, able to exchange data and trigger actions managing the behavior of other connected devices. Thanks to the new electronic trip units, it is possible to implement transfer logics, load shedding and peak shaving strategies. Such solutions require additional plug and play hardware modules and other smart devices.

SACE Emax 2 allows to easily upgrade and customize the Ekip Touch and Hi-Touch trip units, providing

maximum flexibility for any application, delivering value throughout the entire customer journey.

1. Design

Build the circuit-breaker according to specific project requirements.

Key drivers

- Ease of doing business
- Technical specifications
- Application and function

Benefits

- Flexibility of choice
- Customization by application

2. Commissioning

Customize the device thanks to the digital offering. Manage last minute changes through digital upgrades.

Key drivers

- Ease of doing business
- Management of components
- Time to market

Benefits

- Stock optimization
- Zero lead time and installation effort

3. Service

Unlock the full potential of your circuit-breaker at any time, minimizing downtime and installation changes.

Key drivers

- Manage installed base
- Simplify diagnostics
- Simplify the hardware re-design

Benefits

- Zero lead time and installation effort
- Avoid downtime

New digital experience

Packages

Each package includes a set of protection functions or measurements that can be enabled in the trip unit.

Six packages relate to protection functions:

- Voltage Protections
- Frequency Protections
- Power Protections,
- Advanced Voltage Protections,
- ROCOF Protections
- Adaptive Protections

Voltage Protections

Set of protections included:

- UV - Undervoltage, OV - Overvoltage
- UV2 - 2nd Undervoltage
- OV2 - 2nd Overvoltage
- PS - Phase Sequence, VU - Voltage unbalance.

Frequency Protections

Set of protections included:

- UF - Underfrequency
- OF - Overfrequency
- UF2 - 2nd Underfrequency
- OF2 - 2nd Overfrequency.

Power Protections

Set of protections included:

- RP - Reverse active power
- CosΦ - Power factor
- D - Directional over-current
- RQ - Loss of field or reverse reactive power
- OQ - Reactive overpower
- OP - Active over power
- UP - Active underpower
- RQ - 2nd Loss of field or Reverse reactive power.

Advanced Voltage Protections

Set of protections included:

- S(V) - Voltage controlled overcurrent,
- S(V)2 - 2nd Voltage controlled overcurrent,
- R - Residual voltage.

ROCOF Protections

Set of protections included:

- ROCOF - Rate of change of frequency.

Adaptive Protections

Set of protections included:

- Dual Setting - Set A-B.

How to order: via ABB Ability Marketplace™ or traditional ordering channels.

Three packages relate to measurements and diagnostics: Measuring Package, Data Logger and Network Analyzer.

Measuring Package

To monitor the plant through several measurements:

- Phase-to-phase voltage
- Phase-to-neutral voltage
- Phase sequence
- Frequency
- Active power
- eactive power
- Apparent power
- Power factor
- Peak factor
- Active energy
- Reactive energy
- Apparent energy.

Data Logger

To record data about events in the plant:

- Currents
- Voltages
- Sampling rate
- Maximum recording duration
- Recording stop delay
- Number of registers.

Network Analyzer

To monitor the power quality of the network through:

- Harmonic analysis
- Hourly average voltage value
- Short voltage interruption
- Short voltage spikes
- Slow-voltage sags and swells
- Voltage unbalance.

How to order: via ABB Ability Marketplace™ or traditional ordering channels.

When a package is purchased via ABB Ability Marketplace™, it must be activated through:

- Ekip Connect 3 installed on a PC using Ekip T&P to scan the trip unit
- EPiC app mobile installed on a mobile device, by directly using the embedded Bluetooth connection available in the new Ekip trip units.

New digital experience

Packages

Thanks to the maximum flexibility provided by these packages, the new Ekip trip units are now completely customizable. Depending on the specific trip unit version, different packages are available by default, but all of them can be added to the trip unit.

Default functionalities and upgradability of the trip units:

											
	Standard Protection	Standard Measures	Measuring Package	Voltage Protections	Frequency Protections	Power Protections	Adaptive Protections	Data Logger	Network Analyzer	Advanced Voltage Protections	ROCOF Protections
Ekip Touch	●	●	↑	↑	↑	↑	↑	↑	↑	↑	↑
Ekip G Touch	●	●	●	↑	↑	↑	↑	●	↑	↑	↑
Ekip Hi-Touch	●	●	●	●	●	↑	●	●	●	↑	↑
Ekip G Hi-Touch	●	●	●	●	●	●	●	●	●	●	●

● Available by default

↑ Upgradable

↑ Some elements of the package are already provided by default. It is possible to upgrade the trip unit to achieve the complete package.

New digital experience

Solutions

Four solutions are available to fully exploit the potential of the Ekip architecture: Embedded ATS, Adaptive Load Shedding and Power Controller.

Embedded ATS

This function enables the activation of auxiliary generation sources (e.g. generators) and transfers the feed of the loads from the distribution network to such auxiliary sources, thus ensuring a secure transfer to maintain service continuity and reliability of the system.

How to order: via ABB Ability Marketplace™.

The hardware accessories must be ordered via traditional ordering channels.

Adaptive Load Shedding

Thanks to this solution, the circuit-breaker enables islanding transition to avoid blackouts.

It actively controls the power consumption based on the priorities set by the user.

How to order: via ABB Ability Marketplace™.

The hardware accessories must be ordered via traditional ordering channels.

Power Controller

This function is the ideal solution for load management and represents an optimum compromise between reliability, simplicity and cost-effectiveness. Based on a patented calculation algorithm, Ekip Power Controller allows a list of loads to be controlled from remote according to the priorities defined by the user.

How to order: via ABB Ability Marketplace™ or traditional ordering channels. The hardware accessories must be ordered via traditional ordering channels.

When a solution is purchased via ABB Ability Marketplace™, it must be activated through Ekip Connect 3 installed on a PC using Ekip T&P to scan the trip unit.

These solutions require the installation of hardware components that have to be ordered through the traditional ordering channels. For further information, please refer to the specific documentation available on ABB Library (www.abb.com/abblibrary/DownloadCenter/).

Power Controller	-	Ekip Link, Ekip Signalling, motor operators and coils

Architecture

All SACE Emax 2 circuit breakers are equipped with protection trip units that are able to evolve during the life cycle.

Ekip trip units are easily interchangeable from the front, with no need to dismantle the circuit breaker or access any internal or sensitive parts. In particular, they consist of:

- **Protection trip unit**, available with different interfaces and versions that range from basic to more complete; it contains a latest generation microprocessor that performs all the functions of protection and control.
- **Measurement Enabler** module, hardware connected internally on all SACE Emax 2 circuit-breakers equipped with Touch and Hi-Touch trip units. The module enables high accuracy voltage, power and energy measurements and advanced protections without requiring any external connection or voltage transformers. The **Measurement Enabler with voltage sockets** module (standard with Ekip Hi-Touch and optional on Ekip Touch) additionally allows to supply the trip unit through direct connection to the busbar system. Depending on the functionality desired, a software package may need to be purchased separately.
- **Interchangeable rating plug** enables all protection thresholds to be adjusted according to the rated current, increasing flexibility for the customer especially in installations anticipating future development or where the power supplied may be limited temporarily.
- **Main board** is the mechanical housing of the trip unit, which includes a micro-controller for measuring currents and the self-protection functions. The separation of trip units ensures excellent reliability and immunity to conducted and radiated emissions. Integrated new generation Rogowski sensors, which are sensitive to the true r.m.s. value of the current, provide high accuracy of both measurements and protection.

All protection trip units in the SACE Emax 2 family are self-powered by current that crosses the circuit breaker. They provide excellent reliability due to a system of self-control of internal connections.

The setting, testing and downloading of reports can be carried out directly from a Smartphone, Tablet or PC. In addition, the commissioning stage can be further accelerated, minimizing the possibility of errors, by directly configuring the protection trip unit with the DOC design software settings. Cartridge-type modules that are easily installed on-board enable the units to be integrated into the most complex systems.

Additional functions can be created, such as:

- **Synchrocheck**, to check the synchronization of the two half-busbars before enabling circuit-breaker closing;
- Communication with all **supervision systems** available in the Modbus, Profibus and DeviceNet™ protocols as well as the modern Modbus TCP, Profinet, EtherNet/IP™ protocols;
- **Integration into Smart Grids** thanks to the possibility of communicating without the assistance of any external converter, according to standards (IEC 61850) already in use in the automation systems of high and medium voltage substations;
- Multi-voltage **supply module**, which enables the protection trip unit and modules to be supplied with any auxiliary voltage available in direct or alternating current;
- Programmable logic management with **Ekip Signalling** modules that provide a high number of electrical input and output contacts;
- Logical interlocks between circuit breakers, which can be achieved with the **Ekip Link** proprietary communication protocol, avoiding complex wiring due to the transmission of all signals via a bus.

Overview

SACE Emax 2 trip units offer a complete range of solutions for almost installation requirements, for both distribution and generator protection. Upgraded trip unit electronics provide additional features, updated HMI and updated black appearance for clear identification of trip unit version.

Ekip Dip: The standard trip unit

Ekip Dip LI Ekip Dip LSI Ekip Dip LSIG

- Overcurrent protection for distribution systems
- Phase and neutral current measurements
- LED Permanent trip cause signalization
- Ekip Multimeter to display data and measurements

Ekip Touch: The smart trip unit

Ekip Touch LI Ekip Touch LSI Ekip Touch LSIG

- Advanced set of protections and measurements, always upgradable and customizable
- Intuitive touchscreen interface
- High measurement accuracy of electrical parameters

Ekip Hi-Touch: The ultimate trip unit

Ekip Hi-Touch LSI Ekip Hi-Touch LSIG

- Complete set of protections and measurements
- Dual settings of protection
- Network Analyzer function

Ekip G: The generator trip unit

Ekip G Touch LSIG Ekip G Hi-Touch LSIG

- Designed for installations with generators such as Genset, cogeneration and marine applications
- Dedicated set of generator protections

Ekip LCD: The hardened trip unit

Ekip LCD LI Ekip LCD LSI Ekip LCD LSIG Ekip Hi-LCD LSI Ekip Hi-LCD LSIG Ekip G LCD LSIG Ekip G Hi-LCD LSIG

- Suitable for installation in aggressive environments and secure applications
- Available for both distribution and generator protection functions

Protection

SACE Emax 2 trip units offer a great variety of over-current protection functions, with thresholds and timing that can be easily set through dip switches or few simple steps directly from the touchscreen display. These units are available in different versions: LI, LSI, LSIG.

All the Ekip trip units also include a thermal memory function. The protection unit is able to record the trips which have occurred in the last few minutes. Since a trip causes overheating, to protect the cables and let them cool down, the trip unit imposes a shorter delay tripping time in case of a fault helping protect the system against damages due to cumulative overheating.

Watchdog

The Ekip trip units help ensure high reliability due to an electronic circuit that periodically checks the continuity of internal connections, such as trip coil, rating plug and each current sensor (ANSI 74). In case of an alarm, a message is shown on the display (Ekip Touch) or through LEDs signalization (Ekip Dip). If a protection function intervenes, the unit always checks that the circuit breaker has been opened through auxiliary contacts that indicate the position of the main contacts. Otherwise, the unit creates an alarm (ANSI BF code - Breaker Failure) that can be used to command the opening of the upstream circuit breaker. Ekip trip units are also provided with self-protection against abnormal temperature (OT) to help ensure proper operations.

Overview

Test function

All SACE Emax 2 trip units are equipped with a test port on the front that can be used to carry out circuit breaker tests by connecting one of the following devices:

- Ekip TT to perform trip tests, LED tests and checks for the absence of alarms detected by the watchdog function
- Ekip T&P not only for the trip and LED tests, but also for testing the individual protection functions and the saving of the relative report

In addition, the iTest key can run a battery test when the circuit breaker is disconnected.

User interface

Ekip trip units can clearly identify the status of the circuit breaker through LEDs activation or an intuitive graphical interface. A password system is used to manage “Read” or “Edit” modes. The default password (00001) can be directly input by the user. The protection parameters are settable in “Edit” mode, while the information can always be accessed in “Read” mode.

Data & Measurements

SACE Emax 2 trip units are no longer simply protection devices. The Ekip Dip trip unit measures phase and neutral current with greater accuracy, while the other advanced units integrate multimeter and network analyzer functionalities. Compliant with IEC 61557-12 (Class 1 in energy accuracy).

A complete information on the circuit breaker and its operation is available for effective fault analysis and preventive scheduling of maintenance.

Communication & Connectivity

Ekip Touch and Hi-Touch trip units can be easily integrated into the most modern supervision systems through several communication protocols:

- IEC 61850
- Modbus TCP
- Modbus RS-485
- Profibus
- Profinet
- DeviceNet™
- EtherNet/IP™

Measurements, statuses and alarms can be easily programmed and viewed by remote function, with no need of external interface devices. Moreover, the Ekip Com Actuator module can be installed in the front of the device to remotely control the circuit breaker. Several communication modules with different protocols can be used simultaneously. In addition, up to two modules using the same protocol can be installed to help ensure a higher reliability of the installation. The Ekip Com Hub module allows cloud connectivity to ABB Ability™ Energy and Asset Manager platform. The new embedded Bluetooth Low Energy technology makes the circuit breaker easier to access, reducing time to commissioning and set parameter. Ekip Dip and Ekip LCD trip units are not provided with this feature.

Supply

SACE Emax 2 protection trip units are self-supplied through the three phase current sensors installed on the circuit breaker and do not require any external supply devices for basic protection and alarm indication functions. A three-phase 100A current is sufficient for the activation. All protection settings are stored in non-volatile memory that maintains the information without power supply.

The Ekip Supply module can be easily connected to both direct and alternating current to activate additional functions such as:

- Using the unit when the circuit breaker is opened
- Using additional modules such as Ekip Signalling and Ekip Com
- Connection to external devices such as Ekip Multimeter
- Recording the number of operations
- G protection with values below 100A or 0.2 In
- Zone selectivity
- Gext and MCR protection functions

SACE Emax 2 trip units are supplied with an internal battery that enables the cause of a fault to be indicated after a trip, with no time limit. The battery also updates time and date, thus providing the chronology of any events. When the unit is switched off, the battery can be tested by pressing the iTest key on the front.

Grey platform

The previous Ekip trip units and their accessories are now available as spare parts only.

I	50	Instantaneous overcurrent protection	I3 = 1.5 - 2 - 3 - 4 - 5 - 6 - 7 - 8 - 9 - 10 - 11 - 12 - 13 - 14 - 15 x In
		Tolerance	± 10%
G	50N TD	Ground fault protection	I4 ⁽¹⁾ = 0.1 - 0.2 - 0.3 - 0.4 - 0.6 - 0.8 - 1 x In
		Tolerance	± 7%
	51N	Ground fault protection	I4 ⁽¹⁾ = 0.1 - 0.2 - 0.3 - 0.4 - 0.6 - 0.8 - 1 x In
		Tolerance	± 7%

(1) With Vaux all thresholds are available. Without Vaux minimum threshold is limited to: 0.3In (with In = 100A), 0.25In (with In = 400A) or 0.2In (for all other ratings)

(2) The minimum trip time is 1s, regardless of the type of curve set (self-protection)

(3) Total clearing time is the sum of breaking time and trip time

The tolerances above apply to trip units already powered by the main circuit with current flowing in at least two phases or an auxiliary power supply. In all other cases the following tolerance values apply

ABB Code	Trip threshold	Trip time
L	Trip between 1.05 and 1.2 x I1	± 20%
S	± 10%	± 20%
I	± 15%	≤ 60ms
G	± 15%	± 20%

Trip time ³⁾	Enable/Disable function	Pre Alarm	Trip curve	Ekip Dip

(1) With Vaux all thresholds are available. Without Vaux minimum threshold is limited to: 0.3In (with In = 100A), 0.25In (with In = 400A) or 0.2In (for all other ratings)

The tolerances above apply to trip units already powered by the main circuit with current flowing in at least two-phases or an auxiliary power supply.

In all other cases the following tolerance values apply:

ABB Code	Trip threshold	Trip time
L	Trip between 1.05 and 1.2 x I _l	± 20%
S	± 10%	± 20%
I	± 15%	≤ 60ms
G	± 15%	± 20%
Other protection	± 15%	± 20%

(2) 2I Trip time:

- < 3ms when the fault current is above 18kA
- 7ms (three-phase) or 9ms (single-phase) when the fault current is greater than three times the 2I setting (I₃₁)
- ≤ 15ms when the fault current is lower than three times the 2I setting (I₃₁)

(3) Instantaneous protection can be permanently non-defeatable through the dedicated extracode.

Description of protection functions

Overload (L - ANSI 49): available with three different types of trip curve:

1. $t = k/I^2$ with inverse long time;

Thresholds can be fine tuned (for example 1A for circuit-breaker E1.2 1000A) and timings can be set to the second directly from the display. The settable pre-alarm indicates the set threshold is reached before the protection is tripped.

Time-delayed overcurrent (S - ANSI 51 & 50TD): with constant tripping time ($t = k$), or with constant specific let-through energy ($t = k/I^2$), this provides 15 current thresholds and 8 curves, for fine adjustment. The function can be excluded by setting the dip switch combination to "OFF".

Thermal memory: for L and S protection functions, this is used to protect components, such as transformers, from overheating following an overload. The function, which can be enabled by the Ekip Connect software, adjusts the protection tripping time according to the length of time that has elapsed since the first overload, taking into account the amount of heat generated.

Instantaneous overcurrent (I - ANSI 50): with tripping curve without intentional delay, it offers 15 tripping thresholds and can be excluded by setting the dip switch combination to "OFF".

Closing on short-circuit (MCR): the protection uses the same algorithm of the protection I, limiting operation to a settable time window from the closing of the circuit-breaker. The protection also can be disabled to protection I. The function is active with an auxiliary supply.

Programmable instantaneous overcurrent (2I - ANSI 50): Second instantaneous tripping curve designed to mitigate against arc flashes (also referred to as RELT - Reduced Energy Let-Through). This protection can be adjusted from 1.5 to 15 x I_n , with a maximum setting of 18kA. The clearing time of the 2I protection is between 25 and 42ms at 60Hz (+5ms for 50Hz). Easy activation and I/O assignment, including positive feedback, can be implemented using the RELT Ekip Signalling 2K-3 module.

Ground fault (G - ANSI 51N & 50NTD): with tripping time independent of current ($t = k$) or constant specific let-through energy ($t = k/I^2$). The function can be excluded by setting the dip switch combination to "OFF".

Neutral protection: available at 50%, 100% or 200% of the phase currents, or disabled, it is applied to the overcurrent protections L, S and I.

Instantaneous Ground Fault (G-ANSI 50N): with trip curve without instantaneous delay.

Ground fault on toroid (G ext - ANSI 51G & 50GTD): with trip time independent of the current ($t = k$) or with constant specific let-through energy ($t = k/I^2$). Pre-alarm that 90% threshold has been reached permits the fault to be reported to supervision systems without interruption of continuity. The protection uses the external toroid installed, for example, on the star center of the transformer, and is an alternative to the G and Rc functions. The function is active with an auxiliary supply.

Modified Differential Ground Fault (MDGF): Available with the trip time independent of the current ($t = k$) or constant specific let-through energy ($t = k/I^2$). This protection function is designed for systems with solidly grounded multi-source ground fault schemes (refer to instruction manual 1SDH001330R005). The complete equipment level solution includes third-party phase current transformers, summing current transformers, and a dedicated terminal (please refer to 1SDA114800R1 or 1SDA114798R1).

Start-up function: enables protections S, I and G to operate with higher trip thresholds during the starting phase, avoiding untimely trips due to high inrush currents of certain loads (motors, transformers, lamps). The starting phase lasts 100 ms to 30 s and is recognized automatically by the trip unit:

- at the closing of the circuit breaker with a self-supplied trip unit;
- when the peak value of the maximum current exceeds the set threshold ($0.1...10 \times I_n$) with an externally supplied trip unit; a new start-up is possible after the current falls below the threshold.

Current unbalance (IU - ANSI 46): with constant trip time ($t = k$), protects from an unbalance between the currents of the single phases protected by the circuit breaker.

Description of protection functions

Zone selectivity for S, I and G protections (ANSI 68): can be used to minimize circuit- breaker trip times closer to the fault. The protection is provided by connecting all the zone selectivity outputs of the trip units belonging to the same zone and taking this signal to the trip unit input that is immediately upstream. Each circuit breaker that detects a fault reports it to the circuit breaker upstream; the circuit- breaker thus detects the fault but does not receive any communication from those downstream and opens without waiting for the set delay to elapse. It is possible to enable zone selectivity if the fixed-time curve has been selected and the auxiliary supply is present.

Current thresholds: this function enables indicators for four independent thresholds to enable corrective action implementation before the overload L protection trips the circuit breaker. For example, by disconnecting loads located downstream from the circuit breaker that are controlled by Ekip Signalling.

Advanced protection functions

A different operating mode can be chosen for the following protection function:

1. Active: protection enabled by opening of the circuit- breaker when the threshold is reached;
2. Only alarm: protection active, with only alarm indication when the threshold is reached;
3. Deactivated: protection disabled.

Furthermore, when the voltage and frequency protections are activated, they indicate an alarm status even when the circuit breaker is open so that a fault can be identified before the circuit breaker closes.

Undervoltage (UV - ANSI 27): with constant trip time ($t = k$), function is tripped when phase voltage falls below set threshold.

Overvoltage (OV - ANSI 59): with constant trip time ($t = k$), function is tripped when phase voltage exceeds the set threshold.

Underfrequency (UF - ANSI 81L): with constant trip time ($t = k$), function is tripped when network frequency falls below set threshold.

Overfrequency (OF - ANSI 81H): with constant trip time ($t = k$), function is tripped when network frequency exceeds the set threshold.

Voltage unbalance (VU - ANSI 47): with constant trip time ($t = k$), help protect against an unbalance between the voltages of the individual phases that are protected by the circuit- breaker.

Residual current (Rc - ANSI 64 & 50NDT): with constant trip time ($t=k$) helps protect against indirect contacts and is integrated into Ekip Touch LSIG with Measurement Enabler with voltage sockets by a dedicated residual current rating plug and external toroid. The protection is an alternative to the functions G and Gext.

Reverse active power (RP - ANSI 32R): with constant trip time ($t = k$), function is tripped when total active power – in the opposite direction of the current - exceeds the set threshold.

Description of protection functions

In addition to the protection functions, the following indication and control functions are available to warn the user that a given condition has been reached. The active indications are always shown on the display and are also available by communication on the system bus (with Ekip Com modules) or electrical indication (with Ekip Signalling modules).

Synchrocheck (SC - ANSI 25): the synchronism control function compares the voltages in the modules as well as the frequencies and phases of two circuit breakers to which the circuit breaker is connected. Ekip Touch indicates that conditions have been reached that enable the two lines to be made parallel.

The function is available with two work modes:

- In systems with both busbars supplied, where synchronism is determined by:
 1. voltage of the two half-busbars above the U_{live} threshold for the set time
 2. difference of the module of the two voltages below the threshold ΔU
 3. difference in the frequency of the two voltages below the threshold Δf
 4. difference in the phase of the two voltages below the threshold Δ
 5. desirable time for synchronism condition t_{syn}
 6. circuit breaker open
- In systems with an out-of-service line (dead busbar), where the synchronism condition is determined by the concurrence of the following conditions for the t_{ref} set time:
 1. voltage of the active half-busbar above threshold U_{live}
 2. voltage of the dead half-busbar below threshold U_{dead}
 3. circuit breaker open

In both cases, synchronism consent is withdrawn when one of the above conditions is missing and it has not been less than 200ms from the change of the circuit-breaker condition (when the relationship has been set).

The indication of reached synchronism is available directly as an electrical indication via a contact that is always supplied with the module. The function can be activated simply by connecting the Ekip Synchro-check module.

Cyclical direction of the phases (ANSI 47): indicates an alarm through inversion of the phases sequence.

Power factor (ANSI 78): available with a three-phase threshold, warns when the system operates with a power factor that is less than the set power factor.

The following protections are also available:

Second time-delayed overcurrent protection (S2 – ANSI 50TD): in addition to the standard protection S, a second (excludable) time-constant protection is available that enables two independent thresholds to be set in order to help ensure precise selectivity, especially in highly critical conditions.

Second protection against ground fault (ANSI 50GTD/51G & 64REF): whereas with Ekip Touch the user has to choose between implementation of the protection G by internal current sensors (calculating the vector sum of the currents) or G ext external toroids (direct measurement of the ground fault current), Ekip Hi- Touch offers the exclusive feature of simultaneous management of both configurations by two independent ground fault protection curves. Through this characteristic, the trip unit is able to distinguish a non-restricted ground fault which activates the opening of Emax 2, from a restricted ground fault which activates the opening of the medium voltage circuit breaker.

Another possible configuration is with the residual current protection replacing the Gext protection, while the G protection remains active. The residual current protection is activated in the presence of the residual current rating-plug and of the toroid.

Directional overcurrent (D – ANSI 67): the protection is able to recognize the direction of the current during the fault period and detect whether the fault is upstream or downstream of the circuit-breaker. The protection, with fixed time trip curve ($t=k$), intervenes with two different time delays (t_{7bw} and t_{7fw}), according to the current direction. In ring distribution systems, this enables the distribution portion to be identified in which the fault occurred and to disconnect it while continuing to operate the rest of the installation.

Zone selectivity for protection D (ANSI 68): provides the ability to interconnect circuit breakers so that allows rapid isolation of the fault area in the event of a fault. Disconnection only occurs at the level closest to the fault while the remainder of the operation continues uninterrupted. The function is particularly useful in ring and grid installations where, in addition to the zone, it is also essential to define the flow direction of the power that supplies the fault. It is possible to enable directional zone selectivity alternatively to the zone selectivity of the protections S and G, and in the presence of an auxiliary supply.

Start-up function for protection D: enables higher trip thresholds to be set at the outgoing point, as available for protections S, I and G.

Second protection against undervoltage and overvoltage (UV2 and OV2 – ANSI 27 and 59): enables two minimum and maximum voltage thresholds to be set with different delays to enable differentiation, for example, between voltage dip transients due to the start-up of a motor and an actual fault.

Second protection against underfrequency and overfrequency (UF2 and OF2 – ANSI 81L and 87H): enables two minimum and maximum frequency thresholds to be set simultaneously. For example, only an alarm can be set to be tripped when the first threshold is reached, and the circuit breaker can be set to be opened when the second threshold is reached.

Description of protection functions

Dual setting of protections: Ekip Hi-Touch can store a set of alternative parameters for all protections. This second series (set B) can replace, if necessary, the default series (set A) by an external command. The command can be given when the network configuration is edited, for example when an emergency source is activated in the system, changing the load capacity and the short-circuit levels. Another typical application is helping protect the operator opposite the switchgear against the electric arc. In this case, protection delays are minimized to safeguard the operator (Set A), whereas in the absence of an operator the protections are set to help ensure selectivity with the circuit breakers downstream (Set B). It is possible to activate series B by:

- Digital input available with an Ekip Signalling module;
- Communication network, by means of one of the Ekip Com communication modules;
- Directly from the Ekip Hi-Touch display;
- By a settable internal time, after the circuit-breaker has closed.

Differential ground fault (Rc - ANSI 87N): helps protect against internal ground fault on generator winding. The toroid is required to hug the active conductors and the ground conductor. Rc protection is integrated by a dedicated residual current rating plug and the external toroid.

The specific functions for generator protections are described below. For each it is possible to choose the operating mode: active, only alarm or deactivated. All the voltage and frequency protections also operate when the circuit-breaker is open, enabling the fault to be identified before the closing of the circuit breaker.

Voltage controlled overcurrent protection (S(V) - ANSI 51V): protection from maximum current with a constant trip time ($t = k$) that is sensitive to the voltage value. The set current threshold, following a voltage drop, decreases by steps or linearly.

In step mode (controlled mode) the protection is tripped at the set threshold (I_{20}) if the voltage is above U , whereas it is tripped at the lower threshold of the factor K_s ($I_{20} * K_s$) if the voltage is below U .

n linear mode (restrained mode, two voltage limits are selected within which the protection is tripped at the set threshold (I_{20}) reduced by the factor K corresponding to the measured voltage. The variation of the factor K is proportional to the voltage, and for voltages greater than the upper threshold (U_h), the threshold I_{20} applies, and for voltages below the lower threshold (U_l), the minimum threshold ($I_{20} * K_s$) applies.

Residual overvoltage (RV – ANSI 59N): with constant trip time ($t = k$), helps protect against insulation loss in systems with insulated neutral or with grounded neutral with impedance.

Loss of field or reverse reactive power (RQ – ANSI 40 or 32RQ): with constant trip time ($t = k$), the circuit breaker tripped when the total reactive power absorbed by the generator exceeds the set threshold. The constant threshold ($k=0$) or a function of the delivered active power of the generator ($k \neq 0$) can be selected.

Reactive overpower (OQ – ANSI 32OF): with constant trip time ($t = k$), the function is tripped when reactive power exceeds the set threshold in the generator to network direction.

Active overpower (OP – ANSI 32OF): with constant trip time ($t = k$), the function is tripped when the active power exceeds the threshold set in the delivering direction of the generator.

Active underpower (UP – ANSI 32LF): with constant trip time ($t = k$), the function is tripped when the active power delivered by the generator is lower than the set threshold. The protection can be temporarily disabled in order to manage the start-up phase, by setting a time window from the closing of the circuit breaker, by using an electrical signal or via incoming communication to a relay.

Description of protection functions

Rate of change of frequency (ROCOF – ANSI 81R): enables both positive and negative frequency variations to be rapidly detected. The protection is constant and is tripped when the frequency variation in Hz/s is greater than the set threshold.

Second protection against voltage controlled overcurrent protection (S2(V) - ANSI 51V): available in addition to the protection S(V), enables total selectivity to be achieved in all installations.

Second protection against loss of field or reverse reactive power (RQ – ANSI 40 or 32R): enables the generator's de-energization curve to be followed very accurately, thereby avoiding any unnecessary disconnection.

4/6	Load Shedding
4/8	Automatic Transfer Switch
4/10	Synchrocheck logics
4/12	Power Controller

Introduction

Over the last 10 years, utilization of renewables has grown providing a reductions in pollution causing emissions to help achieve a greener world. Environmental changes have driven an awareness of ecology, sustainability, and energy efficiency.

Emax 2 is the first smart circuit breaker delivering all-in-one solutions that combine advanced protection, programmable logic, full connectivity, easy integration and comprehensive energy management in a single revolutionary device or at the local generation side.

Emax 2 and its Adaptive Protections recognize the network change and automatically set new thresholds to provide protection and coordination in on-grid and off-grid conditions.

In order to maximize service continuity, local generation starts to supply the islanded User's plant. Emax 2 is the first circuit breaker able to integrate in one device protection features and **Automatic Transfer Switching (ATS)** programmable logics. This unique integrated solution avoids the need for other external control units, providing a smaller switchgear footprint and commissioning time saving. Strong reduction of wiring connection simplifies the installation and commissioning phase. The **Load Shedding** embedded algorithm is able to manage the power system for the comprehensive microgrid energy management. Before the transfer from the main grid to local line, selected loads are shed to provide power balance. Emax 2 using slope of frequency disconnects loads only in case of emergency imbalance condition.

When the main grid stability is restored **Synchrocheck** logics manages the plant voltage and frequency to enable reconnection. In grid-connected operation, Emax 2 manages the **Power Controller** algorithm to shave peaks and shift loads in order to optimize system performance and productivity. Emax 2 advanced features are easily customized due to commissioning software tools which do not require high level engineering competencies. Ready to use templates enable the download of all the logics directly into the trip unit. The solutions become plug & play, increasing modularization and standardization for design and installation. Examples of several Advanced functionalities which have been developed and integrated in Emax 2 follow the compatibility table.

Adaptive Protections

Emax 2 adds dual setting capability to switching device to help continuous coordination.

Purpose

Plants can now work as a LV Microgrid due to the energy produced by renewable and local power sources, in particular as a consequence of the absence of the Utility power supply, e.g. due to a fault on the MV voltage side. In order to continue to provide a high level of selectivity and continuity of service, it is important to take into account the variation of the short circuit power when moving from. During grid connected condition the fault current on a microgrid feeder is supplied by the Utility, which is higher than the current supplied only by the local generation during islanded condition. As a result, it is desirable to be able to automatically change the several protection thresholds of the units during the transition to the islanding condition.

Application example

A plant is connected to the MV Utility by means of a MV/LV transformer. If the Utility shuts down, the plant will become a Microgrid supplied by the local generator G, which will continue to feed the priority loads by enabling the loads shedding feature of Emax 2.

In **Utility/grid-connected** condition, the generator G is disconnected. Figure 1 illustrates the operation:

- Circuit breaker A is closed
- Circuit breaker B is open
- Circuit breakers C are closed. The protections of the load supplier to D are upgraded using "Set A" of Emax 2 unit.
- Circuit breakers D are closed
- Circuit breaker E is closed
- Circuit breaker QS1 is closed
- All loads supplied.

The circuit breakers C are selectively coordinated with the upstream main circuit breaker A, supplied by the Utility, and the downstream load circuit breakers D (fig. 2).

Fig. 1

With Adaptive protections when there is a Utility outage, circuit breaker A opens and B closes in order to have operation in islanded condition. In order to still provide selectivity, an alternate set of protection settings is required. Adding Emax 2 adaptive protections to circuit breaker C helps ensure this behavior. The second protection setting is optimized for the characteristics of the local generator helping to ensure the incoming supply and load side switching devices will remain selectively coordinated.

Figure 1 illustrates the operation:

- Circuit breaker A is open
- Circuit breaker B is closed
- Circuit breakers C are closed and the protection thresholds move automatically to “Set B”
- Circuit breakers D are closed
- Circuit breaker E is open
- Circuit breaker QS1 is closed
- No priority loads can be disconnected using another functionality of Emax 2 units (see Load Shedding).

The following figures shows switching to a set of parameters which provides selective coordination between circuit breakers C and B by means of the “Adaptive protections” function embedded in the trip unit of the circuit- breaker C.

Fig. 2

Benefits

Emax 2 makes it possible to have two sets of settings implemented in a single device. As a result, the following benefits are provided:

- Overcurrent protection and selectivity provided both in grid-connected and islanded condition
- Service continuity is provided by the addition of a single unit in the switchboard in every plant condition
- Ease of use, due to Ekip Connect software which allows an immediate and intuitive commissioning phase.

For further information, please refer to the White Paper “Emax 2, all-in-one innovation – Adaptive protections” (1SDC007116G0201).

Fig. 3

Load Shedding

Emax 2 has built-in load shedding algorithms to avoid power imbalance in the low voltage plant and stress to components.

Purpose

ABB Emax 2 embeds patented functions based on load shedding which reduces the Microgrid stress in all situations. Typically, Emax 2 is the main protection relay of the low voltage Microgrid located at the interface point with the medium voltage grid and it is able to help control the plant in all situations.

Microgrid in islanding operation

In a standalone, the Microgrid loads remain supplied by the local generation, like diesel GenSet or energy storage systems when power absorption from the main grid ceases. Depending on the plan configuration, the Microgrid generation can be continuously active or started up by an automatic transfer switching (ATS) logic after a disconnection from the main grid. In the islanding transition frequency drop must be avoided; otherwise, the generation protections could trip and jeopardize the Microgrid stability resulting with a long blackout. Emax 2, employing current and voltage measurements, integrates two different fast load shedding logics to reduce this blackout risk, protecting the Microgrid during the intentional or unintentional islanding operation:

- Basic Load Shedding, simple logic able to recognize the Microgrid disconnection event and shed a group of not priority loads thus ensuring a fast time response and power balance.
- Adaptive Load Shedding, the advanced algorithm available with Emax 2 as an enhancement of the basic version. The intelligent software embedded in the unit sheds very quickly the not priority loads according to the Microgrid power consumption and frequency measurements. Moreover, such software has a dedicated configuration for backup generation related to ATS and the software itself is even able to estimate the energy produced by a solar plant based on plant geography settings.

All the versions are available on Emax 2 platform for both the Microgrid situations, sharing some information about the loads under control in the plant.

Application examples

- **Grid-connected plants with running GenSets**, which in addition to supporting the load during emergency conditions subsidizes the grid power by contributing to the day-to-day self-consumption of their loads. These systems may also include renewable power sources. For example, PV-diesel remote communities connected to weak distribution-grids with many daily faults, or facilities located in areas which experience frequent environmental events, for example hurricanes or earthquakes.
- **Grid-connected plants with back-up GenSets** started up after main - gen transfer switching logics that require high reliability. For example, hospitals, banks or data centers.

Benefits

Emax 2 with embedded Load Shedding innovation, provides **Service continuity**

- When a plant is disconnected from the main grid, even if local production is present, there is a significant stress that turns off all the generators resulting in a blackout. Emax 2 Load Shedding logics help reduce the frequency drop that usually triggers a local generation protection trip, enabling a plant to maintain its live status.

Space saving

- No other Programmable Logic Controllers (PLC) are needed as Emax 2 has embedded the intelligence to realize the load shedding logics, taking advantage of the current and voltage sensors for electrical parameter measurements.
- Static converters for low voltage photo voltaic production typically include anti-islanding protections which adds the potential for another power deficit to be added to the main grid contribution during the Microgrid islanding. Emax 2 is the first circuit breaker that estimates solar production without additional sensors.
- Load Shedding is suitable with ATS architectures like Main-BusTie-Gen used to distinguish priority/ non-priority loads.
- Where feasible, BusTie switching device is no longer required resulting in:
 - Significant space and material saving up to 50% in the power distribution switchgear for panel builders.
 - Load Shedding is self-tuned with the specific power imbalance identification and dynamically chooses the controllable loads to be shed, reducing constraints for consultants during plant design.

- ATS unit manages only two sources, without interlock, logic programming and wiring connections for the third circuitbreaker with less time required for installation.

Ease of use

- Load shedding logics are generally set with high engineering skills and customization effort with devices as programmable logic controllers.
- Emax 2 provides easy installation due to predefined templates and the user-friendly graphic interface in the SW commissioning tool.

For further information, please refer to the White Paper “Emax 2, all-in-one innovation – Load Shedding” (1SDC007119G0201).

Typical load shedding application

Automatic Transfer Switch

Emax 2 is designed for transfer switching applications reducing time needed for logics programming and commissioning.

The ATS solution

ABB's Automatic Switching (ATS) system takes advantage of the new capabilities provided by the new Ekip Connect 3 Software and the intelligent digital unit such as Emax 2 to deliver a versatile and reliable solution.

Application example

Automatic Transfer Switch systems are common in all application where service continuity is essential and where there are multi source supplies.

The main applications are:

- Power supplies of UPS groups in general
- Oil & Gas
- Operating rooms and primary hospital services
- Emergency power supplies for civil building, hotels and airports
- Data banks and telecommunication systems
- Power supply of industrial line for continuous processes.

ATS is also applicable where a portion of grid with local generation, called microgrid, can be disconnected from the main grid.

The ATS is a high-performance energy automation system, easy to install and program.

**Benefits****Ready-to-go Programming**

Estimated time and cost savings of ATS Engineering on a low voltage project is 95%.

**Emax 2 compactness**

Estimated space saving on a power switchboard is up to 30%.

**Simplify the connections**

Estimated time and cost savings of ATS cabling and commissioning on a power switchboard is 50%.

**Top rate reliability**

Watchdog functions and fewer installed components delivers enhanced reliability.

For more info check out the white paper "Emax 2, all in one innovation: Embedded ATS system" (1SDC007115G0201).

Synchrocheck logics

Emax 2 is able to analyze voltage waveforms from different power sources.

Purpose

Emax 2's advanced electronics makes it the first smart unit able to island the Microgrid from disturbances such faults or other power quality events and reconnect it to the distribution network, when the disturbance is resolved.

Synchrocheck logics operate the ANSI 25A, with additional automatic re-closing capabilities based on the synchronism status detection.

Using the Ekip Synchrocheck cartridge module, Emax 2 monitors the voltage amplitude, the frequencies and the phase displacement and realizes simple logics to adapt the Microgrid voltage and frequency to the main grid. This regulation based on up and down signals sent to the local generator controllers can be realized by Ekip Signalling contacts in order to achieve synchronization. The circuit breaker automatically recloses when it understands that the synchronism is achieved using Ekip Synchrocheck and the integrated closing coil.

As an alternative, Ekip Synchrocheck can send an indication signal of synchronism achieved.

The cartridge module plugged-into Emax 2 works in dead or live busbar mode, even with automatic check.

Application examples

Synchrocheck logics and protection are useful in the following plant-engineering situations:

- During the Microgrid reconnection to the main grid, speeding up the paralleling procedure between two systems with different steady states. This scenario comes after the islanding Microgrid operation.
- When there is the closed transition of an automatic transfer switch, the main grid should be connected to the same busbar with the backup Microgrid generation in order to provide continuous load operation, with or without a bus-tie switching device.
- This solution can also be adopted for single Gen-Set paralleling operation.

Benefits

Emax 2 with embedded Synchrocheck logics delivers the following benefits:

- Space Savings
 - Components reduction with no external synchronizer and fewer voltage transformers than traditional approaches.
 - Increased reliability & time saving during the installation due to less cabling and related installation complexity.

Ease of use

Embedded protections and logics simplified configuration eliminate the need for programming and engineering efforts.

Power Controller

Emax 2 is able to control both loads and generators to optimize energy costs for end users.

Purpose

Power Controller software enable Emax 2 to manage power to shaving the peaks and shifting loads making. It possible to reduce electricity bills, increase energy efficiency up to 20% and be ready for demand response programs. The Power Controller function is based on a patented calculation algorithm that allows a load list to be controlled through the remote command of the relevant switching device (such as switching device, contactor, drive) or control circuit according to a priority defined locally by the user or remotely by a load aggregator or utility, based on user requirements and types of load.

The algorithm is designed on average power absorption which can be set by the user over a determined time interval. Whenever this value exceeds the fixed power, the Power Controller function intervenes to bring it back within the limits. This management can be accomplished with a single Emax 2 Control or Emax 2 Control+ standard equipped with this function and installed as the low voltage plant controller. Furthermore, the control unit, not only commands the passive loads, it can also manage a reserve generator.

Ekip Power Controller, which can be used with all Ekip Touch trip units in the Emax 2 series, effectively helps to improve energy efficiency by managing the entire low-voltage electrical system. In fact, it is able to adapt the demand for power according to the availability of the energy source, the time of day and the costs indicated in the current pricing plan.

Therefore, the Ekip Power Controller is able to maintain power consumption within the limits defined, thereby optimizing the costs of managing the installation and reducing emissions.

The command sent to the downstream devices can be performed in two different ways:

- through the wired solution, by commanding the shunt opening/closing releases or acting on the motor operators of the loads to be managed;
- through a dedicated communication system.

The ability to control the loads according to a list of predefined priorities provides significant advantages, both economic as well as technical:

- economic: energy consumption optimization is focused on the control of the costs linked in particular to the penalties that are levied when the contractual power is exceeded or when the contractual power is increased by the Distribution System Operator (DSO) as a consequence of exceeding the limit repeatedly.
- technical: the possibility of power absorption over the contractual limits for shorter periods and, as well as, the management and the control of the power consumption over long periods of time. Thus it is possible to reduce the likelihood of malfunctioning due to overloads, or worse, complete inefficiency of the entire plant due to tripping of the LV main switching device.

The exclusive Power Controller function available on the new Emax 2 units monitors the power, keeping it below the limit set by the user. As a result of this more effective use, the peak of power consumed can be limited allowing savings on power bills.

The Power Controller, patented by ABB, disconnects non-priority utilities, such as electric car charging stations, lighting or refrigeration units, during the times when consumption limits need to be controlled, and reconnects them once limits are in check. When required, it automatically activates auxiliary power supplies such as generator sets. No other supervision and control system is required: the required load limit can be set on Emax 2, which can control any switching device located downstream, even if it is not equipped with a measurement function.

Application examples

Power bill savings, demand response, power overload avoidance are the typical reasons for adopting Ekip Power Controller.

The Ekip Power Controller is a common solution for office buildings, shopping malls, hotels, college campuses, waste and water industries and any plant that works like a low voltage microgrid.

Power Controller

Benefits

The Emax 2 with embedded Power Controller delivers, the following benefits:

- **Reduction of energy costs with minimum impact.**

The loads are disconnected from the power supply for short periods, in the minimum number necessary and in a fixed order of priority, enabling power consumption peaks to be limited. This allows the contract drawn up with the energy provider to be renegotiated, reducing the power allocated, with a consequent reduction in total energy costs.

- **Power limited only when necessary.**

The Power Controller function manages up to four different time bands, it is possible to manage a particular power limit during the day (peak) or night (off peak). Consumption during the day when rates are at their highest can be limited.

- **Easy of use**

The Power Controller function allows the installation to be managed efficiently with a simple architecture. Its patented design allows it to measure the total power of the installation without the need to measure the power consumed by each load. Installation costs and times are thereby kept to a minimum.

- The Power Controller function does not require writing, implementation and testing of complicated programs for PLC or computer because the logic has already been implemented in the protection unit and is ready to use; the installation parameters can be set from a smartphone or directly from the switching device display. The Power Controller significantly helps to flatten the load curve, limiting the use of peaking power plants in favor of base load power plants with greater efficiency.

- The Power Controller's integrated communication modules can receive the maximum absorbable power directly from the medium voltage control system, determining consumption for the next 15 minutes. Ekip Power Controller, according to the information received, manages the switching off of non-priority loads or the switching on of reserve generators. The software gives maximum priority to non-programmable preferred energy sources, such as wind and solar, and they are therefore considered uninterruptable. In the event the production of internal power to the controlled network is reduced, due, for example, to decreased production of solar power, Power Controller will disconnect the necessary loads to manage the consumption limit set.
- This benefit is used, for example, in installations with a system of cogeneration. The Power Controller controls the total consumption drawn from the electrical network, interrupting non-indispensable loads when production is reduced and reconnecting them when generator power is sufficient to not exceed limits. The Power Controller has multiple advantages: reduction in energy costs, maximum use of local production and greater overall energy efficiency.

For further information, please refer to the White Paper "Load management with Ekip Power Controller for SACE Emax 2" (1SDC007410G0202).

Introduction

SACE Emax 2 circuit breakers provide a complete and flexible offering that can be adapted to the actual level of supervision and control required.

According to their complexity, the supervision of low-voltage systems may involve different levels:

- **switchgear compartment:** Ekip Touch trip units with their high resolution and multimeter display can control the main electrical values of the circuit breaker.
- **electrical switchgear:** Ekip touch trip units with their high resolution and multimeter display enable the display the data of all circuit breakers installed in the switchgear from a single point: in local mode via control panel on the front of the switchgear, or remotely via several communication protocol.
- **electrical system:** Ekip touch trip units using Ekip View software enable management of complex systems in which devices must be integrated with automated industrial processes or in intelligent electrical networks, better known as smart grids. The system can be supervised by the Ekip View or via Internet with the ABB Ability™ Energy and Asset Manager webapp.

Supervision and control

Supervision of the switchgear compartment

—
For the list of information available for each trip unit, consult chapter 3.

—
The SACE Emax 2 circuit breakers equipped with Ekip electronic trip units enable electrical measurements and diagnostic data to be displayed on the front of the switchgear.

Solution with Ekip Touch trip units

The Ekip Touch electronic trip units are the ideal solution for supervision and control of switchgear. In particular:

- simple and intuitive due to a large, high resolution, colour touch screen;
- no auxiliary power; the Ekip Touch trip units are directly supplied by the current sensors integrated in the circuit breaker, thereby avoiding the need for external power supplies.

—
The Ekip Multimeter is a display unit to be installed on the front of the switchgear for SACE Emax 2 air circuit breakers equipped with Ekip electronic trip units.

Solution with Ekip Multimeter Display on the front of the switchgear

This device remotely displays the information about the system that is available in the trip unit to which it is connected.

The main characteristics of the Ekip Multimeter unit are:

- **Graphical and functional uniformity with the Ekip Touch trip units;** Ekip Multimeter uses the same display as the trip unit to which it is connected, helping ensure perfect continuity between the graphic display and the menu items.
- **Reduced dimensions;** the Ekip Multimeter provides the precision of the trip unit to which it is connected and performs the function of a measuring instrument without requiring the installation of external current and voltage transformers.
- **Flexible installation;** the Ekip Multimeter can be installed at a distance from the trip unit, enabling access to information from the most convenient point.
- **Simultaneous reading of the various electrical values;** the advanced connection system used allows several Ekip Multimeter devices to be connected to the same protection trip unit.

If connected to trip units equipped with display, the Ekip Multimeter enables adjustment of the parameters and protection thresholds.

Supervision and control

Electrical switchgear

Ekip Link is a flexible and efficient solution for controlling and supervising low-voltage electrical switchgear.

SACE Emax 2 circuitbreakers can be connected to the Ekip Control Panel operator panel by means of Ekip Link interface modules.

Ekip Link system

The main characteristics of the Ekip Link System are:

- **centralized control**; from the Ekip Control Panel operator panel, all the main values of the installation (electrical measurements, system diagnostics, trends...) can be monitored and controlled.
- **adaptation to real requirements**; when the electrical values to be monitored are limited to currents only, the Ekip Dip trip unit can be connected to the Ekip Link without having to use circuit breakers equipped with communication modules.

- **access via the Internet** with any Internet browser using the web server function performed by the Ekip Control Panel.
- **rapid installation**, through the use of standardized EtherNet™ components such as STP cables and RJ45 type connectors.
- **ease of use**; due to the Ekip Control Panel operator panel in front of the switchgear with colour touch screen, the system mimic panel can be displayed so that the entire installation can be controlled rapidly and intuitively.
- **ready to use**; Ekip Control Panel is supplied with pre-configured software that requires no programming. It is only necessary to start scanning the Ekip Link system from the operator panel and in a few seconds communication with the connected devices is active.

Ekip Link enables supervision of electrical switchgear on which up to 30 ABB SACE circuit breakers have been installed. Tmax T and Tmax XT series circuit breakers equipped with Modbus RTU communication can also be easily integrated into the Ekip Link system using the multi-serial port fitted on the Ekip Control Panel.

Supervision and control

Electrical system

The integration of low-voltage devices in communication networks is required in particular for: automated industrial processes, industrial and petrochemical sites, modern data centres and intelligent electricity networks, better known as smart grids.

Ekip Com Modules

SACE Emax 2 circuit breakers equipped with Ekip Touch electronic trip units can be integrated into communication networks without the need for external interface devices.

The distinctive characteristics of the SACE Emax 2 circuit breakers offering for industrial communication are:

- **Wide range of protocols supported;** the Ekip Com communication modules enable integration with the most common communication protocols based on RS485 serial lines and the most modern communication systems based on EtherNet™ infrastructures, which provides an exchange of data in the order of 100 Mbit/s.
- **Installation times reduced to a minimum** due to the plug & play technology of the communication modules, which are connected directly to the circuit breaker terminal box without having to remove the electronic trip unit.
- **Repetition of communication for greater reliability of the system;** the circuit breaker can be equipped with two communication modules, allowing the information on two buses to be exchanged simultaneously.
- **Smart grid ready;** the Ekip Com 61850 module is the solution for integrating SACE Emax 2 circuit breakers into the automated systems of electrical substations to meet the IEC 61850 standard without the need for complex external devices.
- **Complete supervision** of Modbus RTU or Modbus TCP/IP networks via the software for PC Ekip View.

ABB Ability™ Edge Industrial gateway

This is a DIN-rail mounted communication module for cloud-connectivity. ABB Ability™ Edge Industrial gateway can collect data throughout the system from ACBs to MCCBs, multimeter, miniature CBs.

Moreover, it is possible to connect sensors for environmental parameters (temperature, water, gas) via both analog and digital I/O. Modules for Wi-Fi or GPRS connection are provided as optional features.

Software and web applications

Ekip Connect

ABB SACE offers software applications that allow to utilization of the full potential of Ekip trip units' power management, acquisition and analysis of electrical data, protection testing, maintenance and diagnostic functions.

Ekip Connect is the ABB commissioning and programming software tool that allows the user to unlock the full potential of circuit breakers, improving the efficiency of the electrical plant.

A circuit breaker is an essential part of any electrical system to help ensure that the day-by-day processes can be performed safely and continuously. For this reason, it is vital that the installation and use of the circuit breaker is as simple as possible. From commissioning to implementation, through monitoring, testing and analysis, Ekip Connect software tool guides the user in the management of ABB circuit breakers throughout the whole product life cycle.

Using Ekip Connect, the user can commission and program Ekip to manage power, acquire and analyze electrical values, and test protection, maintenance and diagnostic functions.

Just as Emax 2 has evolved into a true power manager that has simplified the electrical plant, so too has Ekip Connect software become the user's key to access the full capability of the breaker.

—
Panel builders
- 50% commissioning time

Ease of use

Imagine the panel builder who has to commission a circuit breaker and needs to save time. Using Ekip Connect – instead of managing it manually – commissioning time can be reduced by up to 50%. Providing a stress-free relationship with the device complexity, Ekip Connect is an easy-to-use software that has all the answers. Ekip Connect's simple and intuitive interface provides, from the very start, easy navigation throughout the tool and quick access to every circuit breaker operation. At a glance, the user can see all the information needed, thus being able to quickly and effectively assess any situation.

—
Facility manager
100% full exploitation
of your device

Full exploitation

Imagine the facility manager who needs to perform fast and precise diagnostics to have the system under control and to avoid failures. Ekip Connect provides tools to unlock the full capabilities of Ekip and, thanks to the customizable dashboard, organize the windows to manage any function of the device just the way the user wants. It is possible to manage all the circuit breaker settings and specifications directly with Ekip Connect, the perfect instrument for exploring and using the breaker. Diagnostics are easy too: it is possible to consult and download the event log, alarms and trips, thereby facilitating identification and understanding of any anomalies. One single software to manage all ABB low-voltage circuit breakers equipped with an electronic trip unit, granting full integration between air and molded case circuit breakers.

—
Consultant/system
integrator
Complex logic at your
fingertips

Product enhancement

Imagine the consultant or a system integrator who wants to implement advanced features while avoiding risk of mistakes. Ekip Connect enables the implementation of complex logics with just a few clicks. Add, setting and managing advanced functions has never been so easy. Cloud platform, automatic transfer switch logic, load shedding, advanced protection and demand management can be managed and easily set through the Ekip Connect software. Software features can even be expanded by purchasing and downloading software packages for advanced functions directly using Ekip Connect.

Software and web applications

Ekip Connect

Accessing the full potential of the circuit breaker is finally possible. Thanks to Ekip Connect software, complete utilization of the breaker and more can be achieved with a few clicks.

Configuration

- Set protections
- Configure system and communication parameters
- Breaker start-up

Monitoring & analysis

- View CB status and measure
- Read events list
- CB diagnostic

Product implementation

- Set advanced protections
- Logic activation
- Enable advanced functions

Test

Testing & reporting

- Check correct functionality
- Perform tests
- Export report

Ekip Connect is available for free download at <https://library.abb.com>

EPiC mobile app

With Bluetooth embedded into the trip units it possible to connect rapidly to the EPiC mobile app. Buy additional protection functions or measures, register the product and configure the device.

EPiC helps the customer during the commissioning of the system; all system parameters and protection thresholds can be set rapidly in the Ekip Touch trip units thanks to the easy and intuitive navigation pages of the app.

Software and web applications

Ekip View

Ekip View is the software for supervising devices connected to a communication network that uses the Modbus RTU or Modbus TCP protocol.

It is the ideal tool for all applications that require:

- remote control of the system,
- monitoring of power consumption,
- fault detection of the system,
- allocation of energy consumption to the different processes and departments,
- preventative maintenance planning.

The main characteristics of Ekip View are:

- **Engineering** free and ready to use software which guides the user in the recognition and configuration of the protection units without the need for any supervision system engineering activities.

- **Dynamic mimic panel;** after automatic scanning of the network, for each of the devices found, Ekip View proposes a dynamic symbol that summarizes the most important information (status, electrical measurements, alarms). The extensive library of electrical symbols enables the entire electrical system to be depicted in detail.
- **Analysis of trends;** the instantaneous and past trends of currents, powers and power factors are represented graphically and can be exported into Microsoft Excel for detailed analysis.
- **Reports;** advanced reports can be created regarding system and communication network diagnostics. Using the Alarm Dispatcher option, the user can receive the most important notifications via text message.
- **Access via web** to the installation, thanks to Ekip View's Web Server function.

Software and web applications

ABB Ability™ Energy and Asset Manager

ABB Ability™ Energy and Asset Manager is the state-of-the-art cloud-solution for monitoring, supervising and analyzing a site's electrical distributions system and equipment resulting in improved overall performance, efficiency and safety.

Through its scalable and flexible approach, ABB Ability™ Energy and Asset Manager ensures full-range integration of main electrical LV and MV equipment installed in the distribution and sub-distribution switchboards. It also enables up-upgrades at any time via the ABB Ability Marketplace™ in just a click. With a single easy-to-use interface, ABB Ability™ Energy and Asset Manager assists the user by means of a cloud computing or hybrid platform, enabling analysis of relevant data and optimization of installation anytime, anywhere.

Value proposition

• Flexible and scalable platform

- Ease of use: the power of understanding at your fingertips

- Remote visibility: Discovery of facility performance anytime, anywhere
- Faster payback
- Scalable, from monitoring of a production line to the supervision of multiple sites.
- **Improved site efficiency**
 - Reduce cabling, connectivity components and commissioning time with embedded WiFi and 3G/4G
 - Save up to 20% on energy bills
 - Improve energy inefficiency by up to 10%
 - Identify unexpected consumptions and eliminate unwanted energy usage
 - 100% avoidance of penalties for low power factor.
- **Maximized performance**
 - 100% elimination of costly unplanned labor
 - Up to 40% maintenance-cost reduction: avoid unnecessary inspection and maintenance
 - Up to 15% extended asset lifetime
 - Up to 30% reduction in operational costs
 - Minimized risk of unplanned downtime
 - Monitoring up to 70% of potential asset-failure causes.
- **Enhanced personnel safety**
 - Improve safety: Healthy assets mean healthy people mean healthy business
 - Keep operators safe with remote monitoring
 - Supervise and schedule maintenance remotely.

External solution with ABB Ability™ Edge Industrial gateway

The ABB Ability™ Edge Industrial gateway module can be mounted on DIN rail to collect data throughout the system. Moreover, it is possible to connect sensors for environmental parameters (temperature, water, gas) via both analog and digital I/O.

Modules for Wi-Fi or GPRS connection are provided as optional features.

For any further information please visit our website : <https://new.abb.com/about/our-businesses/electrification/abb-ability/energy-and-asset-manager>.

Energy Measurements

Introduction

The Emax 2 circuit-breakers have been designed to manage all low voltage electrical installations with maximum efficiency: from industrial plants, naval applications, traditional and renewable power generation installations to buildings, shopping centers, data centers and communication networks.

Achieving maximum efficiency of an electrical installation in order to reduce consumption and waste requires intelligent management of power supplies and energy. For this reason, the new technologies used in the Emax 2 circuit-breakers with

Ekip Touch trip units allow the productivity and reliability of any installation to be optimized, and at the same time, reducing power consumption while fully respecting the environment.

Class 1 in power and energy measurements

Before starting to take any action on electrical systems and to analyze the available data, data accuracy is required.

With Ekip Touch trip units, the SACE Emax 2 range of circuit-breakers provides extremely accurate measurements, in compliance with the relevant IEC 61557-12 Standard.

Network Analyzer

The quality of the power supply is an important factor to consider in order to preserve the loads, to avoid equipment malfunctions, and to optimize energy consumption. The power quality of a power system is never a perfect sinusoidal waveform, distortions and harmonics are always present. Factors that cause reductions in power quality can be monitored and controlled with the Network Analyzer embedded function thereby avoiding the need for expensive external monitoring devices.

Energy Measurements

Class 1 accuracy

With the Ekip Touch trip units the embedded measurement functionalities allow the measurement of power and energy to a Class 1 degree of accuracy, as specified by the IEC 61557-12 Standard, avoiding the need of additional device saving costs, space and installation time.

With the Ekip Touch trip units, measurements of power and energy to an IEC 61557-12 Standard compliant, Class 1 level of accuracy, are provided by the embedded measurement functionalities. Thus, there is no need for additional devices resulting in advantages in terms of cost savings, space reduction and installation time optimization. When energy needs monitoring, even small inaccuracies can result in a wasted money. Accuracy is everything and depends on the design and manufacturing quality of solution used. The SACE Emax 2 with Ekip Touch trip units are designed to provide 1% accuracy for power and energy monitoring.

Thanks to the extremely accurate Rogowsky coil, ABB Ekip Touch trip units are able to provide Class 0.5 for voltage and current measurements and Class 1 for active power and energy measurements, complying with and certified by the IEC 61557-12 Standard.

IEC 61557-12 can be applied to both AC and DC electrical networks up to 1000 V AC or 1500V DC. Moreover, an upgrade of the device is quick and easy: the measurement functions not included in an installed trip unit can be downloaded directly from the MarketPlace via EPiC mobile app, thus al-

lowing new system requirements to be met with ease. Measurement data can be displayed in several ways:

- On the embedded display on the trip unit
- On a smartphone via Bluetooth (EPiC mobile app)
- Using the Ekip Connect software on a PC
- On an Ekip Multimeter external display
- On a cloud-platform thanks to ABB Ability™ Energy and Asset Manager
- In the supervision system (ex SCADA) via several communication protocols
- On the control panel display

Energy Measurements

Network Analyzer

The Network Analyzer function available in all Ekip Touch trip units, enables monitoring of the quality of energy based on harmonics, micro-interruptions or voltage dips without the need for dedicated instrumentation.

Effective preventive and corrective action can be implemented through accurate analysis of faults, thereby improving the efficiency of the system.

Applications

Electrical equipment is designed for optimum operation under constant and uniform voltage level, as close as possible to the rated value. In addition, industrial equipment, working on a three phase supply, requires the three phase voltage levels to be balanced. Power quality is a description of how well a power system complies with the above ideal conditions. Power quality issues can have negative consequences on the components and on the energy efficiency of the network. Thus, power quality monitoring is becoming more important in modern power systems, and will be a key part of the smart grid of the future.

In particular, power quality evaluation includes the following aspects:

- Deviations of voltage average value from the rated value
- Short decreases (sags) or increases (swells) of voltage value
- Voltage imbalance, i.e., difference in voltage values between different phases
- The presence of current and voltage harmonics.

Distortions of the voltage value (sags, swells) and/or frequency can have harmful consequences, especially for process industries, leading to possible production stoppages with consequently expensive downtime, damage to motor drives and damage to PLCs. Examples of process industries that can be badly hit by voltage instabilities include the plastics, petrochemicals, textiles, paper, semiconductor, and glass industries.

Voltage sag occurs when the value of the voltage is reduced below the rated one for a certain amount of time. Similarly, voltage swell occurs when the voltage is increased above the rated value for a certain amount of time.

RMS voltage values and frequency are two fundamental features of a voltage signal, but the “pureness” of the voltage waveform is also an important point. An ideal voltage waveform should be a perfect sinusoid, but this is not something that is normally seen in the real world. Frequencies other than the fundamental are always present.

These frequencies are called harmonics: a harmonic of a signal is a component frequency of the wave spectrum that is a multiple of the fundamental frequency. Harmonic content is an issue that is becoming increasingly debated: technological developments in the industrial and household field have led to the development of electronic equipment which, due to their operating principles, absorb a non-sinusoidal current (non-linear load). Such current causes a non-sinusoidal voltage drop on the supply side of the network with the consequence that the linear loads are also supplied with a distorted voltage.

Energy Measurements

Network Analyzer

Power electronics produce harmonic content that can affect other loads in the plant: the result can be an overheating of the asynchronous motor and an overload on the power factor correction capacitors. To get information about the harmonic content of

voltage and current waveforms and to take measures if such values are high, a dedicated index has been defined. The total harmonic distortion (THD) of a signal is a measurement of the harmonic distortion present.

The first step towards better Power Quality: measurement

A Power Quality monitor is the most commonly used tool for detecting voltage sags and power quality issues. Measurement is the first step for checking the status of the installation and initiating the root cause analysis. Power Quality measurements and related instrumentation are described in specific industrial Standards such as IEC61000-4-30 and IEEE 1250. Now Ekip Touch trip units for the Emax 2 embeds the power quality monitor in a low voltage molded case circuit-breaker. The Network Analyzer function complies with the prescriptions of IEC 61000-4-30 and IEEE 1250.

The Network Analyzer function allows the user to set controls on the voltage in order to analyze the operation of the system: any time a control parameter exceeds a preset threshold, an alarm is generated. The accuracy of voltage measurements by the Emax 2 is excellent at 0.5%. The Emax 2 Network Analyzer complies with IEEE 1250-2011, Section 3 for the monitoring of the voltage value, imbalance and harmonic content, which is the equivalent of IEC61000-4-30 Class S for voltage values and imbalance and Class B for the harmonic content.

Network Analyzer

Hourly average voltage value
Short voltage interruption
Short voltage spikes
Slow voltage sags and swells
Voltage imbalance
Harmonic analysis

Referring to the voltage sag ambit, as an example, the Network Analyzer function has the ability to control three kinds of sag classes, defined by the user:

Parameter	Description
Sag Threshold (First Class)	This defines the first alarm threshold. It is expressed as % Un.
Sag Times (First Class)	In the event of dropping under the first alarm threshold, this defines the time beyond which the alarm counter is increased.
Sag Threshold (Second Class)	This defines the second alarm threshold. It is expressed as % Un.
Sag Times (Second Class)	In the event of dropping under the second alarm threshold, this defines the time beyond which the alarm counter is increased.
Sag Threshold (Third Class)	This defines the third alarm threshold. It is expressed as % Un.
Sag Times (Third Class)	In the event of dropping under the third alarm threshold, this defines the time beyond which the alarm counter is increased.

Two different types of counters for each power quality monitoring function are made available directly on the trip unit touch screen: one is a cumulative counter, which stores all the alarms (for example, all the voltage sags) from the beginning, and one is a 24h counter, that shows the alarms in the last 24 hours.

With the optional communication module (Modbus, Profibus, Profinet, etc.) eight counters for each power quality monitoring function are available: one is the cumulative and the other seven are the daily counters of the last seven days of activity.

Energy Measurements

Network Analyzer

Operating Principle

The Network Analyzer function performs continuous monitoring of the quality of energy, and shows all results through a display or communication module. In particular:

- **Hourly average voltage value:** in accordance with international Standards, this must remain within 10% of the rated value, but different limits can be defined according to the needs of the installation. The positive sequence voltage is compared with the limits. If the limits are exceeded, the Ekip Touch trip units generates a signaling event. The number of these events is stored in a counter. The counter values are available for each of last 7 days, as well as the total. The measures available are the positive and negative sequence voltages and positive and negative sequence currents of the last interval monitored. The time of the calculation of the average values can be set between 5 minutes and 2 hours.
- **Interruptions / short dips in voltage:** if the voltage remains below a threshold for more than 40ms, the Ekip Touch trip units generates an event that is counted in a dedicated log. The voltage is monitored on all lines.
- **Short voltage spikes** (voltage transients, spikes): if the voltage exceeds a threshold for 40ms, set for a pre-determined time, the Ekip Hi-Touch generates an event that is counted.
- **Slow voltage sags and swells:** when the voltage strays outside a range of acceptable limit values for a time greater than the one set, the Ekip Hi-Touch generates an event that is counted. Three values can be configured for voltage sags and two for voltage swells, each associated with a time limit: this enables verification of whether the voltage remains within a curve of values that are acceptable by equipment such as computers. The voltage is monitored on all lines.

- **Voltage imbalances:** if the voltage values are not equal or the phase displacements between them are not exactly 120°, an imbalance occurs, which is manifested with a negative sequence voltage value. If this limit exceeds the threshold value set, an event is stored which is counted.
- **Harmonic analysis:** the harmonic content of voltages and currents, measured to the 50th harmonic, as well as the value of the total harmonic distortion (THD), are available in real time on the display or through the communication modules. The Ekip Touch trip units also generates an alarm if the THD value or a magnitude of at least one of the harmonics exceeds the values set. The voltage and current values are monitored on all phases.

All information can be displayed directly on the screen or on a smartphone, a PC or in a network system with any of the communication modules. This is an embedded function of Ekip Touch trip units and analyzes important parameters of the distribution network including:

- The average Voltage value
- Short Voltage interruptions and spikes
- Slow Voltage sags and swells
- Voltage imbalance
- Harmonic analysis

Accessories

6/29	Testing and programming
6/30	Service

The new SACE Emax 2 circuit-breakers have been designed to optimize the installation and commissioning of accessories.

The auxiliary connection terminal box also features two areas:

- **Accessories area** for the installation of accessories inside the circuit-breaker and Ekip trip unit. The areas dedicated to accessories can be accessed by removing the flange and the accessories covers. On removal, the operating mechanism area remains segregated and protected, providing safety for operators.
- **Safety area**, which delimits the housing of the stored energy operating mechanism of the circuit-breaker. To carry out maintenance on the operating mechanism, the covers of the accessories and safety area must be removed.
- **Terminal area** for housing and inserting the terminals for wiring the auxiliary connections. The terminals can be wired first and then installed on the circuit-breaker terminal box, thereby facilitating cable connection for the operator.
- **Cartridge module area**, housing for the Ekip modules. These are installed directly on the upper part of the circuit-breaker or of the fixed part without having to remove the Ekip electronic trip unit, thereby minimizing the time required for the installation and commissioning of accessories.

Standard supply

The fixed versions of SACE Emax 2 automatic circuit-breakers and switch-disconnectors are always supplied as standard with the following accessories:

- IP30 protection for switchgear door
- front terminals for E1.2 circuit-breaker
- adjustable rear terminals for E2.2 ... E6.2 circuit-breaker, mounted in HR – HR configuration.

In addition, for **fixed automatic circuit-breakers** only:

- four standard open/closed auxiliary contacts - AUX 4Q 400V
- four terminals for auxiliary connections
- mechanical signalling of the tripping of the protection trip unit - TU Reset
- contact signalling tripping of Ekip protection trip unit S51 250V.

The withdrawable versions of automatic circuit-breakers and switch-disconnectors are always supplied as standard with the following accessories:

- closed circuit-breaker racked-out mechanism lock
- lever for racking in and racking out
- anti-insertion lock.

In addition, for **withdrawable automatic circuit-breakers** only:

- four standard open/closed auxiliary contacts - AUX 4Q 400V
- four terminals for auxiliary connections
- mechanical signalling of the tripping of the protection trip unit - TU Reset
- contact signalling tripping of Ekip protection trip unit S51 250V.

The fixed parts feature:

- IP30 protection for switchgear door
- anti-insertion lock
- standard shutter lock – SL
- adjustable rear terminals, mounted in HR – HR configuration.

Accessories for circuit breakers

SACE Emax 2 circuit-breakers offer a wide range of accessories developed to meet the application and installation requirements of every customer.

Signalling

Open / closed auxiliary contacts - AUX (Fig. 01A/B/C)

SACE Emax 2 circuit-breakers can be equipped with auxiliary contacts that signal the open or closed status of the circuit-breaker. The first block of four standard contacts is always provided with the automatic circuit-breakers. The switching contacts are available in the following configurations:

Open / closed auxiliary contacts (AUX 4Q)		E1.2	E2.2 ... E6.2
4 auxiliary contacts	standard	●	●
	digital signals	●	●
	mixed	●	●
Open / closed supplementary auxiliary contacts (AUX 6Q)			
6 auxiliary contacts	standard	-	●
	digital signals	-	●

Fig. 03

Ready to close signalling contact - RTC (Fig. 03)

The ready to close signalling contact – RTC – indicates that the circuit-breaker is ready to receive the closing command. The circuit-breaker is ready to close when the following conditions have been met:

- circuit-breaker open
- springs loaded
- no opening command or locks on the opening command
- circuit-breaker reset following tripping of Ekip protection trip unit
- YU energized.

		Standard contact	Contact for digital signals
Type		Switching	
Minimum load		100mA @ 24V	1mA @ 5V
Breaking capacity			
DC	24V	-	0.1
	250V	0.5A @ 0ms / 0.2A 10ms	-
AC	250V	3A @ cosφ 0.7	-

Electrical diagram reference: figure 71

Fig. 04

Mechanical signalling of the tripping of protection trip unit - TU Reset (Fig. 04)

The automatic circuit-breakers are always equipped with a mechanical device that signals the tripping status of the protection trip units. After the Ekip trip unit has tripped due to an electrical fault, the signalling device indicates the tripping status on the front of the circuit- breaker. The circuit-breaker can be reset only after the signalling pushbutton has been restored to its normal operating position. The device conforms to the Ansi 86T standard.

Emax 2 is fitted with the anti-pumping function. With the anti-pumping function the opening order always takes priority over a closing order. Moreover, when the Circuit Breaker is in open position due to a trip, the anti-pumping function allows the reclosing of the operating mechanism only after a reset of the trip, avoiding improper or accidental closing.

Fig. 05

Contact signalling tripping of protection trip unit Ekip – S51 (Fig. 05)

The contact signals the opening of the circuit- breaker after the Ekip protection trip unit has tripped. The circuit-breaker can only be closed after the “TU Reset” tripped trip unit mechanical signalling pushbutton has been restored to its normal operating position.

The switching contact, which is always supplied with the standard version of the automatic circuit-breakers, is also available on request in a version for digital signals (for electrical characteristics, please refer to the RTC contact). It can also be associated with an optional accessory for resetting by remote control - YR. For electromechanical characteristics, please refer to the RTC contact.

For E2.2, E4.2 and E6.2 it is possible to double the signal for the tripping of the Ekip Trip Unit specifying the dedicated code for the S51/2. The S51/2 is an alternative of the YR contact.

Electrical diagram reference: figure 11

Contact signalling loaded springs – S33 M/2

This contact is always supplied with a geared motor; it remotely signals the spring status of the circuit-breaker operating mechanism. It is available in both standard version and version for digital signals.

		Standard contact	Contact for digital signals
Type		changeover contacts	changeover contacts
Minimum load		100mA @ 24V	1mA @ 5V
Breaking capacity			
DC	24V	-	0.1A
	125V	0.3A @ 0ms	-
	250V	0.15A @ 0ms	-

Accessories for circuit breakers

Fig. 06

Control

Opening and closing release- YO/YC (Fig. 06)

The opening and closing releases enable the circuit-breaker to be controlled remotely. Opening is always possible, while closing is available only when the closing springs of the operating mechanism are loaded and the circuit-breakers is ready to close. The releases operate by means of minimum impulse current duration time of 100 ms.

They can also operate in permanent service. If opening command is given by means of the opening release, the circuit-breaker can be closed by de-energizing the opening release and, after a time of at least 30 ms, by controlling the closing.

The circuit breaker operating mechanism has an anti-pumping function that helps ensure safety and reliability.

Electrical diagram reference: figures 75, 77

Second opening and closing release - YO2/YC2

For certain installations the redundancy of mechanisms and circuit-breaker operating circuits is often requested. To address these needs, the SACE Emax 2 circuit-breakers can be equipped with double opening release and double closing release. The technical characteristics of the second opening release remain the same as those of the first opening and closing release. A double closing release can be used for E2.2, E4.2 and E6.2 circuit-breakers; a second open release in an alternative to undervoltage release.

Electrical diagram reference: figures 72, 79

Opening and closing release test unit - YO/YC Test Unit

The opening and closing releases test unit helps ensure that the various version of releases are running smoothly, to provide a high level of reliability in controlling circuit-breaker opening.

The test unit helps ensure the continuity of the opening and closing releases with a rated operating voltage between 24V and 250V (AC and DC), as well as verifies the functions of the opening and closing coil electronic circuit. Continuity is checked cyclically with an interval of 30s between tests. The unit has optic signals via LEDs on the front, which provide the following information:

POWER ON: correct power supply of the YO/YC Test Unit

OPEN ON: coil switch absent, power supply absent or insufficient, interrupted cables

SHORT ON: coil switch failure, short-circuited cables

OPEN and SHORT FLASHING: faulty coil switch or incorrect supply

OPEN and SHORT OFF: correct operation of the coil switch.

Two relays with one change-over area also available on board the unit, to allow remote signalling of the following events:

Failure of a test - resetting takes place automatically when the alarm stops

Failure of three tests - resetting occurs only by pressing the manual RESET on the unit.

Characteristics of device

Auxiliary power supply	24V...250V AC/DC
------------------------	------------------

Specification of the signalling relays

Maximum interrupted current	6A
Maximum interrupted voltage	250V AC

Fig. 07

Undervoltage release – YU (Fig. 07)

The undervoltage release opens the circuit-breaker when there is a significant voltage drop or power failure. It can be used for safe remote tripping, for blocking closing or to control the voltage in the primary and secondary circuits. The power supply for the release is therefore obtained on the supply side of the circuit-breaker or from an independent source. Circuit-breaker closing is permitted only when the release is powered. The undervoltage release is an alternative to a second shunt trip or the anti-racking out device. The circuit-breaker is opened with trip unit power supply voltages of 35-70% U_n . The circuit-breaker can be closed with a trip unit power supply voltage of 85-110% U_n .

General characteristics

Power supply (U_n)	AC	DC
24V	●	●
30V	●	●
48V	●	●
60V	●	●

Opening time (YU)		
E1.2	30 ms	
E2.2 ... E6.2	50 ms	

Accessories for circuit breakers

Fig. 08

Time-delay device for undervoltage release (UVD) (Fig. 08)

The undervoltage release can be combined with an electronic time-delay device for the circuitbreaker, allowing for delayed external tripping with adjustable preset times. Use of the delayed undervoltage trip unit is recommended to prevent tripping when the power supply network for the trip unit is subject to brief voltage drops or power supply failures. Circuit-breaker closing is inhibited when it is not powered. The time-delay device must be used with an undervoltage release with the same voltage.

General characteristics		
Power supply (UVD)	AC	DC
24-30V	-	●
48V	●	●
60V	●	●
110-127V	●	●
220-250V	●	●
Adjustable opening time (YU + D):	0.5-1-1.5-2-3 s	

Resetting remotely- YR

The reset coil YR permits remote resetting of the circuit-breaker after a release has tripped due to an over-current condition. It is available for all automatic circuit-breakers, in different voltage supply:

General characteristics		
Power supply (Un)	AC	DC
24V	●	●
110V	●	●
220V	●	●
Operating limits	90%...110% Un	

Electrical diagram reference: figure 4

Motor – M (Fig. 09A/B)

The motor automatically loads the closing springs of the circuit-breaker. The device, which can be installed from the front, automatically reloads the springs of the operating device when they are unloaded and power is present. In the event no power is present, the springs can be manually loaded by a dedicated lever on the operating device. The motor is always supplied with the limit switch contact S33 M/2 which signals the status of the springs.

Safety

Key lock in open position - KLC (Fig. 10)

Due to these safety devices, the SACE Emax 2 circuit-breaker can be locked in the open position. The lock can also be used during maintenance activities when the accessory cover is removed. The device is available with lock with different keys – KLC-D (for only one circuit-breaker) or with the same keys – KLC-S (for several circuit-breakers). Four different key numbers are available for the KLC-S. SACE Emax 2 also allows an alternative key lock to be installed. The following key lock set-ups are also available:

- Ronis
- STI
- Kirk
- Castell

For the special ones the key lock must be supplied by the customer.

Padlocks - PLC (Fig. 11) *

These padlock options allow the circuit-breaker to be kept open by acting directly on the mechanical operating device (opening pushbutton). Three different padlock versions, which are an alternative to the PBC, are available:

- Locking device with plastic structure for up to a maximum of three padlocks of 4 mm
- Locking device with metal structure for up to a maximum of two padlocks of 8 mm
- Locking device with metal structure for one padlock of 7 mm or for padlock holders

The padlocks must be supplied by the customer.

Key lock in racked-in / test / racked-out position - KLP (Fig. 12)

The KLP enables the mobile part to be locked in one of the three positions: racked-in, test and racked-out. It can be supplied with locks with different keys – KLP-D or with the same keys – KLP-S.

A second key lock option can be added for a maximum of two key locks per breaker. Locking in the racked-in, test and racked-out positions can be achieved by using other key locks – KLP-A.

Adapters are offered for acceptance of Ronis, STI, Kirk and Castell locks, which are to be provided by the customer. With the exception of the Castell version, every circuit-breaker can accept up to two key locks. Locking can be limited to the racked-out position with a supplementary accessory.

Padlock in racked-in / test / racked-out position - PLP (Fig. 13) *

The PLP can hold up to three padlocks of 8 mm in diameter. The structure housing the padlocks can also be used in combination with the 2 lock KLP keylock option. It also enables the lock of the moving part only in the racked-out position by means of the supplementary lock in racked-out position.

Shutter lock – SL

When the mobile part is in the test position, the shutters of the fixed part close, maintaining the insulation distance and physically segregating the live parts of the of the cradle from the internal breaker compartment of the cradle. Using two dedicated mechanisms, the upper and lower shutters can be locked independently of one another. The shutter lock is always supplied with the fixed part of the SACE Emax 2 circuit-breakers and locks the shutters, using a maximum of three padlocks of 4 mm, 6 mm or 8 mm.

Anti-racking out device / Fail safe - FS

The anti-racking out, or fail safe device prevents the moving part of withdrawable circuit-breakers from being racked out of the cradle when the springs are charged. It is always supplied with the moving part of UL circuit-breakers and switch disconnectors. It is an alternative to the undervoltage coil or second shunt coil.

* Compliant with OSHA 3120 up to 50 pounds

Accessories for circuit breakers

Protection devices

Fig. 14

Lock for racking-out mechanism with circuit- breaker in closed position (Fig. 14)

All SACE Emax 2 withdrawable circuit-breakers are always supplied with a lock that prevents the mobile part from being racked in and racked out when the circuit- breaker is in the closed position. To rack in the mobile part, the circuit-breaker must be in the open position.

Lock for racking in / racking out the mobile part when the door is open - DLR

The DLR accessory, which is mounted on the fixed part, prevents the mobile part from being racked in or out when the switchgear door is open.

Fig. 15

Lock to prevent door opening when the circuit- breaker is in racked-in / test position - DLP (Fig. 15)

The DLP safety device prevents the switchgear door from being opened when the mobile part of the withdrawable version of the circuit-breaker is in the racked-in or test position. This accessory can be installed on either the right-hand or left-hand side of the fixed part. It is available for circuit- breakers E2.2, E4.2 and E6.2. If mounted on the right side, it is an alternative to the mechanical interlock, the AUX 15Q or the DLC.

Fig. 16

Lock to prevent door opening when the circuit- breaker is in the closed position - DLC (Fig. 16)

The DLC prevents the compartment door from being opened when the circuit-breaker is in the closed position (and with the circuit-breaker racked in for withdrawable circuit-breakers).

It also blocks the circuit breaker from closing when the compartment door is open. DLC for E1.2 is an alternative to the mechanical interlock and the AUX 15Q. DLC direct door for E2.2...E6.2 is compatible with mechanical interlocks type A-B-D and the AUX 15Q. DLC cable door for E2.2...E6.2 is not compatible with mechanical interlock. DLC cable door for E2.2... E6.2 is compatible with the AUX 15Q.

Anti-insertion lock

The withdrawable circuit-breakers are equipped with special locks that allow the mobile part to be inserted only into the corresponding fixed part.

Mechanical operation counter - MOC (Fig. 17)

The number of mechanical operations is often one of the elements that determines the frequency of ordinary maintenance operations on circuit-breakers. With this mechanical operation counter, which is always visible on the front of the circuit-breaker, the user knows how many mechanical operations the device has performed.

Fig. 17

Fig. 18

Protection device for opening and closing pushbuttons - PBC (Fig. 18)

The PBC accessory is applied to the safety cover of the circuit-breaker and is available in two versions:

- Pushbutton protection device, which blocks operations on both the opening and closing pushbuttons unless the special key is used.
- Padlockable pushbutton protection device, which makes it possible to block either or both pushbuttons and lock the covers in place. It does not trip the breaker as a standard "Padlock device" would.
- PBC is an alternative to PLC padlocks.

IP30 Protection (Fig. 19)

Supplied with every circuit-breaker, the cover frame is installed on the door of the switchgear to achieve IP30 degree of protection on the front part of the circuit-breaker.

IP54 Protection

This transparent cover completely protects the front of the circuit-breaker, enabling an IP54 degree of protection to be achieved. This accessory is provided with double key lock (same or different keys).

Fig. 19

Terminal covers – HTC / LTC (Fig. 20)

The HTC and LTC accessories are installed over in the terminal area, thereby reducing the risk of direct contact with the live parts of the circuit-breaker. Two versions are available for E1.2: HTC high terminal covers and LTC low terminal covers.

Separators - PB (Fig. 21)

These protection devices increase the insulation distance between adjacent phases. They are available for all the frames.

Fig. 20

Remote Racking Device - RRD

The Remote Racking Device (RRD) operates Emax 2 circuit breakers without being in front of the gear. The remote control is connected to the main device through 10mt cable that allows the Racking-in/out command from a remote location. The cable length provides enough distance from the arc flash boundary of traditional low voltage switchgears. The RRD can only operate with the circuit breaker in open position and discharged springs. The RRD for switchgear and controlgear has been investigated by UL in accordance with the Standards UL 2876 and CSA-C22.2 (n.14).

Fig. 21

General characteristics

Rated service voltage	100...127V AC
	200...240V AC/DC
Frequency	50-60Hz
Rated power	150 W, 120VA
Working and storage temperature range	-5°C...+70°C / 23°F...158°F
Minimum time interval between operation	3 minutes
Maximum operating distance	100m / 33ft
Weight	11Kg / 24.3lb

Accessories for circuit breakers

Connections

The SACE Emax 2 circuit breakers offer a wide variety of terminals, thereby providing an optimal solution for connection to the power circuit.

Accessories for circuit breakers

Interlocks and switching devices

Mechanical interlocks

These interlock systems enable various opening

and closing configurations to be obtained between two or three circuit-breakers. Four types of interlock configuration are available:

Types of interlock	Possible application	Logic	Circuit-breakers																								
Type A																											
Excludes the possibility of having two circuit-breakers in the closed position at the same time.	Main line power supply and emergency power supply. 	<table><tr><th>1</th><th>2</th></tr><tr><td>O</td><td>O</td></tr><tr><td>I</td><td>O</td></tr><tr><td>O</td><td>I</td></tr></table>	1	2	O	O	I	O	O	I	Available between circuit-breakers of different sizes and with any fixed / withdrawable version																
1	2																										
O	O																										
I	O																										
O	I																										
Type B																											
Permits a pair of circuit-breakers to be closed if the third is open. The latter can only be closed when the pair is open.	Two power supplies from transformers and one emergency power supply. 	<table><tr><th>1</th><th>2</th><th>3</th></tr><tr><td>O</td><td>O</td><td>O</td></tr><tr><td>I</td><td>O</td><td>O</td></tr><tr><td>O</td><td>O</td><td>I</td></tr><tr><td>I</td><td>O</td><td>I</td></tr><tr><td>O</td><td>I</td><td>O</td></tr></table>	1	2	3	O	O	O	I	O	O	O	O	I	I	O	I	O	I	O	Available between E2.2, E4.2 and E6.2 circuit-breakers and with any fixed / withdrawable version						
1	2	3																									
O	O	O																									
I	O	O																									
O	O	I																									
I	O	I																									
O	I	O																									
Type C																											
Permits two out of three circuit-breakers to be closed at the same time.	Two half-busbars can be powered by a single transformer (bus-tie closed) or by both at the same time (bus-tie open). 	<table><tr><th>1</th><th>2</th><th>3</th></tr><tr><td>O</td><td>O</td><td>O</td></tr><tr><td>I</td><td>O</td><td>O</td></tr><tr><td>O</td><td>I</td><td>O</td></tr><tr><td>O</td><td>O</td><td>I</td></tr><tr><td>O</td><td>I</td><td>I</td></tr><tr><td>I</td><td>I</td><td>O</td></tr><tr><td>I</td><td>O</td><td>I</td></tr></table>	1	2	3	O	O	O	I	O	O	O	I	O	O	O	I	O	I	I	I	I	O	I	O	I	Available between E2.2, E4.2 and E6.2 circuit-breakers and with any fixed / withdrawable version
1	2	3																									
O	O	O																									
I	O	O																									
O	I	O																									
O	O	I																									
O	I	I																									
I	I	O																									
I	O	I																									
Type D																											
Permits one out of three interlocked circuit-breakers to be closed.	Three power supplies on the same busbar that must not operate in parallel. 	<table><tr><th>1</th><th>2</th><th>3</th></tr><tr><td>O</td><td>O</td><td>O</td></tr><tr><td>I</td><td>O</td><td>O</td></tr><tr><td>O</td><td>I</td><td>O</td></tr><tr><td>O</td><td>O</td><td>I</td></tr></table>	1	2	3	O	O	O	I	O	O	O	I	O	O	O	I	Available between E2.2, E4.2 and E6.2 circuit-breakers and with any fixed / withdrawable version									
1	2	3																									
O	O	O																									
I	O	O																									
O	I	O																									
O	O	I																									

The mechanical interlocks offer multiple solutions for installation that simplify their integration into the switchgear. The interlocks can be mounted:

- vertically VR
- horizontally HR
- mixed L

Different types of interlocks can be supplied according to the maximum distance between two interlocked breakers:

Configuration		Type A	Type B, C, D
Horizontal		2750mm	1600mm
Vertical		1000mm	1000mm
Breakers	E1.2	●	-
	E2.2	●	●
	E4.2	●	●
	E6.2	●	●

For B, C and D types, the maximum distance between the two furthest breakers is 3200mm for horizontal configurations and 2000mm for vertical configurations. It is possible to make the mechanical interlock among three circuit-breakers disposed in 'L position' by using the cables of three horizontal circuit-breakers interlock. The distance between the horizontal and vertical circuit-breakers must maintain the minimum and maximum distance. All cables can be cut to provide easy installation in switchboards.

Mechanical interlocks are not compatible with AUX 15Q, the lock for preventing door opening when the circuit breaker is in the closed position (DLC) or when the circuit breaker is in the racked in or test position (DLP), if mounted on the right side.

External Automatic Transfer Switches ATS

The ATS (Automatic Transfer Switch) is a network-unit transfer device used in installations where switching from the main power line to an emergency line is required in order to ensure that power is supplied to the loads in the case of power loss or abnormalities from the main line. These devices are able to control the entire transfer procedure automatically, but also offer commands for performing the procedure manually.

The new generation of ATSs (ATS021 and ATS022) offers the most advanced and complete solution for ensuring service continuity.

The ATS021 and ATS022 devices can also be used with all automatic circuit-breakers and switch-disconnectors of the Tmax XT family. The ATS021 and ATS022 devices have been designed to be self-powered. ATS022 is also designed for the connection of an auxiliary supply, which enables the use of further functions.

The ATS021 and ATS022 devices carry out control of both power supply lines and also analyze:

- phase imbalance;
- frequency imbalance;
- phase loss.

In addition to the standard control functions, the ATS022 unit also permits:

- the priority line to be selected;
- a third circuit-breaker to be controlled;
- the device to be integrated into a supervision system with Modbus communication (auxiliary supply needed);
- parameters to be read and set, and measurements and alarms to be displayed by means of a graphical display.

Typical applications are: supply of UPS (Uninterrupted Power Supply) units, operating rooms and primary hospital services, emergency power for civil buildings, airports, hotels, databases and telecommunication systems and power supply of industrial lines in continuous processes.

For correct configuration, each circuit-breaker connected to the ATS021 or ATS022 device must be fitted with the following accessories:

- mechanical interlock;
- motorized control of opening and closing;
- contact for signalling status (open / closed) and contact for signalling tripping;
- contact for signalling circuit-breaker racked in (for withdrawable circuit-breaker).

Accessories for circuit-breakers

(3) Available for Ekip trip units, Grey Platform only

Accessories for Ekip trip units

All accessories are automatically recognized by the Ekip units without the need for any specific configuration. Based on the installation method and connection of the trip units, the electronic accessories can be divided into:

Installation	Modules	Highlights
Terminal box	Cartridge modules: - Ekip Com - Ekip Link - Ekip Signalling 2K - Ekip Signalling 3T - Ekip Supply - Ekip Synchrocheck	- The Ekip Supply module enables the trip units to be supplied with a wide range of control voltages - The Ekip supply module must be present for the other modules to be used - The Ekip Supply module has a dedicated position in the installation area in the terminal box; the other modules can be installed as desired in the positions available - When fitted with the Ekip Supply module, up to 2 additional modules can be installed on E1.2, and up to 3 on E2.2, E4.2 and E6.2
Accessorizing area	Ekip LCD Ekip Com Actuator Ekip RTC Ekip AUP Ekip Signalling 4K Rating Plug Battery for Ekip	- These are installed in specific housings from the front of the circuit-breaker - For all the trip units with a touch screen interface, an LCD version is available with any adjustment in the protection and measurements functions - Thanks to the optional modules Ekip RTC and Ekip AUP, all the Ekip trip units can acquire and monitor the ready to close state and the racked-in/test isolated/racked-out position of the circuit-breaker. The module to acquire the open/closed position is supplied as standard for all Ekip trip units. - The Ekip Signalling 4k module increases the remote signalling possibilities for E2.2, E4.2 and E6.2 and can be installed if the Ekip Supply module or another 24V auxiliary power supply is present
Ekip trip unit test port	Ekip T&P Ekip TT	- These can be connected to the front test port of the trip units even with the device in operation - Compatible also with the SACE Tmax XT range
External	Ekip Multimeter Ekip Control Panel Ekip Signalling 10K Ekip Signalling Modbus TCP External neutral sensor Homopolar toroid Differential toroid	- Ekip Multimeter can supply a 24V DC output to the trip unit it is connected to - Several Ekip units and / or Ekip Signalling 10K can be connected at the same time to the same Ekip trip unit - These are connected to the trip unit by the terminal box of the circuit-breaker

Fig. 23

Power supply

Ekip Supply module (Fig. 23)

The Ekip Supply module supplies all Ekip trip units and modules present on the terminal box and of the circuit-breaker with several auxiliary power (in AC or DC) available in the switchgear. The module is mounted in the terminal box and permits the installation of the other advanced modules. It can be field installed at any time.

Two versions are available according to the control voltage available:

- Ekip Supply 110-240V AC/DC
- Ekip Supply 24-48V DC

	Supply	Ekip Supply	
Ekip Dip	Nominal voltage	24-48V DC	110-240V AC/DC
	Voltage range	21,5-53V DC	105-265V AC/DC
	Rated power (including modules)	10W max.	10W max.
	Inrush current	~2A for 20ms	~2A for 20ms
Ekip Touch/ Hi-Touch	Nominal voltage	24-48V DC	110-240V AC/DC
	Voltage range	21,5-53V DC	105-265V AC/DC
	Rated power (including modules)	10W max.	10W max.
	Inrush current	~2A for 20ms	~2A for 20ms

Fig. 24

Connectivity

Ekip Com modules (Fig. 24)

The Ekip communication modules enable SACE Emax 2 circuit-breakers to be integrated in an industrial communication network for remote supervision and control of the circuit-breaker. They are suitable for all distribution and generator protection versions of the Ekip Touch and Hi-Touch trip units. Since they are mounted in the terminal box, communication can be maintained with withdrawable circuit-breakers, even while in the racked-out position. Several Ekip Com modules can be installed at the same time, thereby enabling connection to communication systems that use different protocols.

The Ekip Com modules for Modbus RTU, Profibus-DP and DeviceNet™ contain a terminating resistor and dip switch for optional activation to terminate the serial network or bus.

The Profibus-DP module also contains a polarization resistor and dip switch for its activation.

The Ekip Com modules are supplied with auxiliary position contacts Ekip AUP and ready to close circuit-breaker contacts Ekip RTC.

For industrial applications in which a higher reliability of the communication network is required, the Ekip Com Redundant modules can be installed together with the corresponding Ekip Com modules in order to provide a back-up connection to the network.

The following communication protocols are available for Ekip trip units:

Protocol	Ekip Com Module	Ekip Com Redundant Module
Modbus RTU	Ekip Com Modbus RS-485	Ekip Com R Modbus RS-485
Modbus TCP	Ekip Com Modbus TCP	Ekip com R Modbus TCP
Profibus-DP	Ekip Com Profibus	Ekip Com R Profibus
Profinet	Ekip Com Profinet	Ekip Com R Profinet
EtherNet/IP™	Ekip Com EtherNet/IP™	Ekip Com R EtherNet/IP™
DeviceNet™	Ekip Com DeviceNet™	Ekip Com R DeviceNet™
IEC61850	Ekip Com IEC61850	Ekip Com R IEC61850
Cloud connectivity	Ekip Com Hub	—

Fig. 26

Fig. 27

Ekip Link Module (Fig. 25)

The Ekip Link module enables the SACE Emax 2 circuit-breaker to be connected to ABB communication system for locally supervision of switchgear by means of the **Ekip Control Panel** and to act as Power Controller. It is suitable for all Ekip trip units and can be factory or field installed in time to the circuit-breaker terminal box, even when Ekip Com communication modules are present. In this way, it is possible to have both local supervision of the control panel by means of the **Ekip Control Panel** and supervision of the system by means of the Ekip Com modules connected to the communication network.

The Ekip Link modules are supplied complete with auxiliary position contacts Ekip AUP and ready to close circuit-breaker contacts Ekip RTC.

—
Electrical diagram reference: figure 58

Ekip Com Hub (Fig. 26)

Ekip Com Hub is the new communication module for Emax 2 cloud-connectivity.

Emax 2 equipped with Ekip Com Hub can establish the connection to ABB Ability™ Energy and Asset Manager for the whole low-voltage power distribution panel. This dedicated cartridge-type communication module just needs to be inserted into the terminal box and connected to the internet.

For further information related to ABB Ability™ Energy and Asset Manager, please visit the dedicated website <https://new.abb.com/about/our-businesses/electrification/abb-ability/energy-and-asset-manager>.

—
Ekip Com Hub has to be connected to the external network in order to refresh the Cybersecurity Certificate and keep it up to date. In case of long-term disconnections from the network for more than 6 months (e.g. module in stock or physically disconnected), the correct functioning of Ekip Com Hub can be inhibited from the cybersecurity measures in place.

It is recommended to keep the module connected or periodically connect it (e.g. in stock or physically disconnected) to the external network.

Ekip Com Actuator module (Fig. 27)

The Ekip Com Actuator module enables the SACE Emax 2 circuit-breakers to be opened and closed remotely. The Ekip com Actuator is optional and can be ordered for all Ekip trip units equipped with Ekip Com or Ekip Link modules; it is installed on the front of the circuit-breaker in the right-hand accessories area.

—
Electrical diagram reference: figures 76, 78

Fig. 29

Signalling

Ekip 2K Signalling modules (Fig. 29)

The Ekip 2K Signalling modules supply two input and two output contacts for control and remote signalling of alarms and circuit-breaker trips. They can be programmed from the trip unit's display or through the Ekip Connect software. When using Ekip Connect, combinations of events can be freely configured. They are suitable for all distribution and generator protection versions of the Ekip Touch and Hi-Touch trip units. Three versions of the Ekip 2K Signalling modules are available: Ekip 2K-1, Ekip 2K-2, RELT Ekip 2K-3. A maximum of three modules for E2.2, E4.2, E6.2, and two for E1.2 can be installed at the same time. The RELT Ekip Signalling 2K-3 module enables the wizard for easy configuration of the arc flash mitigating 2I protection. This automatically assigns the I/O for remote activation and positive feedback.

Electrical diagram reference: figures 41, 42, 43

Fig. 29 A

Ekip 3T Signalling modules (Fig. 29A)

The Ekip 3T Signalling modules provide three analog inputs for PT100/PT1000 thermo-resistances and one analog input 4-20mA for external sensors. Through the Ekip Connect commissioning tool, it is possible to set different control thresholds and associate them to digital signals. The Ekip 3T Signalling modules are suitable for all the versions of Ekip Touch and Hi-Touch trip units. However, PT100 sensors are compatible with the Ekip black platform only. Up to two modules can be installed simultaneously on SACE Emax 2: one Ekip Signalling 3T-1 and one Ekip Signalling 3T-2. ABB external probes PT1000 are available for busbar applications.

Fig. 30

Ekip 4K Signalling module (Fig.30)

The Ekip 4K Signalling module is available for E2.2, E4.2, E6.2. This module provides four input contacts and four output contacts for control and remote signalling. It can be programmed from the trip unit's display or through the Ekip Connect software. When using Ekip Connect, combinations of events can be freely configured.

It is installed in the housing provided in the front left of distribution and generator protection versions of the Ekip Touch and Hi-Touch trip units, without having to remove the trip unit itself and is an alternative to the AUX 6Q auxiliary contacts unit.

Electrical diagram reference: figure 2

Fig. 31

Ekip 10K Signalling modules (Fig. 31)

Ekip 10K Signalling is an external signalling unit designed for DIN rail installation for SACE Emax 2 automatic circuit-breakers. The unit provides ten contacts for electrical signalling of timing and tripping of protection devices.

If connected via the Ekip Connect software, the contacts can be freely configured in association with any event and alarm or combination of both.

Several Ekip 10K Signalling modules (up to 3) can be installed at the same time on the same Ekip trip unit. The Ekip 10K Signalling module can be powered either by direct or alternating current and can be connected to all the trip units via internal bus or Ekip Link modules.

Electrical diagram reference: figure 103

Accessories for Ekip trip units

Fig. 32

Ekip Signalling Modbus TCP (Fig. 32)

Modbus is an external signalling unit designed for DIN rail installation. The function of the signalling module is to share, via an Ethernet network with Modbus TCP communication protocol, information about the state of circuit-breakers that might not have the ability to provide such information via Ethernet, and also to allow these circuit-breakers to be operated via remote control.

Characteristics of output contacts		Number of contacts		
Type	Monostable	Ekip 2K	Ekip 4K	Ekip 10K
Maximum switching voltage	150V DC / 250V AC			
Maximum switching current				
30V DC	2A	2	4	10
50V DC	0.8A	output	output	output
150V DC	0.2A	+ 2	+ 4	+ 11
250V AC	4A	input	input	input
Contact/coil insulation	1000 Vrms (1min @50Hz)			

Fig. 33

Ekip 10K/Ekip Signalling Modbus TCP power supply

Auxiliary supply	24-48V DC, 110-240V AC/DC
Voltage range	21.5-53V DC, 105-265V AC/DC
Rated power	10VA/W
Inrush current	1A for 10ms

Ekip RTC and Ekip AUP Signalling contacts (Fig. 33)

The signalling contacts allow the Ekip trip units to acquire the ready-to-close status of the circuit-breaker, as well as its racked-in, test or racked-out position. These contacts can be optionally installed in the accessories area of SACE Emax 2 equipped with Ekip Dip, Ekip Touch and Ekip Hi-Touch trip units. Ekip Link and Ekip Com modules are always supplied with Ekip RTC and Ekip AUP.

Measurement and protection

Fig. 34

Measurement Enabler module (Fig. 34)

The Measurement Enabler module is supplied standard with Ekip Touch trip unit and is installed to the right of the trip unit. This module enables the trip unit to internally measure phase and neutral voltages, as well as power and energy. In particular, the Measurement Enabler module makes the platform always customizable through the activation of dedicated software packages available in the ABB Ability Marketplace™. Depending on the functionality desired, a software package may need to be purchased separately. The voltage outlets are installed standard on the lower terminals and can be moved to the upper terminals upon request. No external connection is required, except for rated voltages higher than 690V. In this case, the voltage connection is moved outside the circuit-breaker by using voltage transformers connected to the terminal box. The installation of external outlets does not guarantee Class 1 accuracy.

Fig. 35

Measurement Enabler with voltage sockets (Fig. 35)

This module has the same features as the Measurement Enabler module, but additionally includes voltage sockets that allow direct connection of line voltages higher than 85V. This module is mandatory for Rc protection and is always supplied with Ekip Hi-Touch and Ekip G trip units. On request, it can be also installed with the Ekip Touch version.

Fig. 36

Ekip Synchrocheck (Fig. 36)

This module enables the control of the synchronism condition when placing two lines in parallel. The module can be used with distribution and generator protection versions of the Ekip Touch and Hi-Touch trip units with the measurement function enabled. Ekip Synchrocheck measures the voltages from two phases of one line through an external transformer and compares them to the measured voltages at the breaker. An output contact is available, which is activated upon reaching synchronism, and enables the circuit-breaker to be closed by means of wiring with the closing coil.

Characteristics of output contacts		Number of contacts
Type	Monostable	Ekip Synchrocheck
Maximum switching voltage	150V DC / 250V AC	
Maximum switching current		
30V DC	2A	1 output
50V DC	0.8A	
150V DC	0.2A	
250V AC	4A	
Contact/coil insulation	1000 Vrms (1min @50Hz)	

Electrical diagram reference: figure 48

Accessories for Ekip trip units

Fig. 37

Ekip LCD interface (Fig. 37)

The Ekip trip units can be supplied with LCD black and white display, equipped with dedicated pushbuttons to easily interact with the circuit-breaker. This option is well suited for aggressive environments characterized by low temperatures, high humidity or the presence of dust and chemical agents. The Ekip LCD trip units share the same advanced features with the touchscreen trip units in terms of protections, measurements and accuracy levels. However, the LCD version is not equipped with the embedded Bluetooth antenna.

Fig. 38

Rating Plug (Fig. 38)

The rating plugs are field interchangeable from the front on all trip units and enable the protection thresholds to be adjusted according to the actual rated current of the system. This function is particularly advantageous in installations that may require future expansion or in cases in which the power supplied needs to be limited temporarily (e.g. mobile Gen Set). The Overload (L) protection function can be disabled at any time by using an L OFF version of the rating plug. There is a matching L OFF version for each standard version of rating plug.

Circuit-breaker	Rating plugs available (both in standard and L OFF versions)
E1.2	400-600-800-1000-1200
E1.2 250	100-200-250
E2.2	400-600-800-1000-1200-1600-2000
E2.2 250	100-200-250
E4.2	400-600-800-1000-1200-1600-2000-2500-3200-3600
E6.2	400-600-800-1000-1200-1600-2000-2500-3200-3600-4000-5000-6000

Special rating plugs are also available for differential protection against ground faults in combination with a suitable toroid to be installed externally.

Circuit-breaker	Rating plug available for Rc protection
E1.2	400-630-800-1250
E1.2 250	100-200-250
E2.2	400-630-800-1250-2000
E2.2 250	100-200-250
E4.2 / E6.2	400-630-800-1250-2000-3200-4000

Fig. 39

Current sensor for neutral conductor outside the circuit-breaker (Fig. 39)

Only suitable for three-pole circuit-breakers; the current sensor enables protection of the neutral conductor to be achieved through connection to the Ekip trip unit. Supplied on request.

Electrical diagram reference: figure 27

Fig. 40

Homopolar toroid for the earthing conductor of main power supply (Fig. 40)

The distribution and generator protection versions of the Ekip Touch and Hi-Touch trip units can be used with an external toroid positioned, for example, on the conductor that connects the star centre of the MV/LV transformer to ground (homopolar transformer): in this case, the ground protection is called Source Ground Return. There are four sizes of the toroid: 100A, 250A, 400A, 800A. The homopolar toroid is an alternative to the toroid for differential protection.

Electrical diagram reference: figure 25

Fig. 41

Toroid for differential protection (Fig. 41)

Connected to the Ekip Touch and Hi-Touch LSIG trip units equipped with a rating plug for differential protection, this toroid enables ground fault currents of 3...30A to be monitored. To be installed on the busbar system, it is an alternative to the homopolar toroid.

Electrical diagram reference: figure 24

Fig. 42

Dedicated terminal for Modified Differential Ground Fault (MDGF) protection (Fig. 42)

This terminal is needed to realize the MDGF scheme with SACE Emax 2 circuit-breakers. Two types of terminal are available: one for the fixed circuit-breakers and one for the withdrawable ones. The application needs the mounting of external phase current transformers and summing current transformers. SACE Emax 2 MDGF scheme is compatible only with current transformer from Amram that must be purchased separately. External current transformers must have the same rating of the circuit-breaker rating plug.

For the complete application wiring diagram, please refer to 1SDM000019A1001. Listed below the commercial codes of Phase CTs and Summing CTs compatible with SACE Emax 2 MDGF scheme.

Current rating (A)	Phase current transformer	Summing current transformer
800	CT409-801-01, or CT420-801-01	CT550-5X4-01000
1200	CT409-122-01, or CT420-122-01	CT550-5X4-01515
1600	CT409-162-01	CT550-5X4-02000
2000	CT409-202-01, or CT421-202-01	CT550-5X4-02500
2500	CT409-252-01, or CT421-252-01	CT550-5X4-03125
3200	CT409-322-01, or CT421-322-01	CT550-5X4-04167
4000	CT421-402-01	CT550-5X4-05000
5000	CT421-502-01	CT550-5X4-06250

Accessories for Ekip trip units

Fig. 43

Displaying and supervision

Ekip Multimeter (Fig. 43)

Ekip Multimeter is a display unit to be installed on the front of the switchgear for SACE Emax 2 circuit-breakers equipped with Ekip electronic trip units. The device is equipped with a large touch screen display and enables measurements to be displayed with the same levels of precision. If connected to trip units with a display, Ekip Multimeter enables the adjustment of parameters and protection thresholds. Up to 4 Ekip Multimeter devices can be connected at the same time to the same Ekip protection trip unit to display currents, voltage, powers and energy.

Ekip Multimeter can be powered either in direct current or in alternating current. It is equipped with a 24V DC output that supplies the trip unit to which it is connected.

Power supply	24-48V DC, 110-240V AC/DC
Tolerance	21.5-53V DC, 105-265V AC/DC
Rated Power	10VA/W
Inrush current	2A for 20ms

Fig. 45

Testing and programming

Ekip TT testing and power supply unit (Fig. 45)

Ekip TT eliminates the need for the Ekip trip unit to have an auxiliary power supply. In this way, the last protection device tripped can be displayed directly on the screen or by the illumination of corresponding LEDs. Moreover, the unit permits verification that the circuit-breaker trip mechanism is operating correctly (trip test). Ekip TT can be directly connected through the front test connector of any Ekip trip units of SACE Emax 2 and allows to set all protection functions.

Fig. 46

Ekip Programming module testing kit (Fig. 46)

Ekip Programming module is a kit that includes different components for programming and testing the electronic protection trip units.

The kit includes:

- Ekip T&P (Test and Programming);
- Ekip TT unit;
- adaptors for Emax and Tmax trip units;
- USB cable to connect the Ekip Programming module unit to the Ekip trip units;
- installation CD for Ekip Connect and Ekip Ekip Programming module interface software.

The Ekip Programming module unit easily connects from your PC (via USB) to the trip unit (via mini USB) via the cable provided.

The Ekip Programming module unit can perform simple manual or automatic tests on the trip unit functions. The Ekip Programming module will also provide the ability to conduct more advanced function testing that allows the addition of harmonics and the shifting of phases to more accurately represent the real conditions of an application. Thus, leading to more concise protection function parameters that may be required for critical applications. It can also generate a test report as well as monitor maintenance schedules.

Fig. 47

Ekip Programming Module (Fig. 47)

The Ekip Programming module is used for programming Ekip trip units via USB to a PC using the Ekip Connect software that can be downloaded on-line. This can be useful for uploading/downloading entire sets of parameters for multiple breakers both for set-up as well as for maintenance (for periodic cataloging breaker parameters in case of a catastrophic situation).

Service

Extended warranty

For ABB Low Voltage circuit breakers, the 1-year standard factory warranty can be extended for 5 years.

Extended warranty activation can be requested after the online registration in the Extended Warranty tool. This web-tool verifies that the application of the circuit breaker is within the recommended guidelines, and grant the registration of the circuit breaker.

When end users details are registered, one year of extra warranty is offered free-of-charge.

Extended Warranty can be ordered by following the steps:

- 1) Registration in the online tool (Extended Warranty Tool) to verify the application.
- 2) Extended Warranty part number(s) and registration code received by email
- 3) Place the order of the circuit breaker(s) together with:
 - Extended warranty part number(s)
 - Unique registration code

Warranty coverage:

- Any possible issues related to circuit breaker quality for the complete extra warranty time
- Accessories mounted by the factory only.

Service

Spare parts

The following original and spare parts are available:

- Accessories and Safety Covers
- Closed Door lock lever
- Closing Spring
- Conversion kit from Fixed to Moving part
- Conversion kit from Moving Part into Fixed version
- Conversion kit into Switch Disconnecter MS
- Ground sliding contacts
- Fixing screws kit
- Arching chambers
- Jaw contacts
- Moving part Terminals
- Poles
- Kit front cover plugs
- Lateral guides for Fixed and Moving part
- Left and Right plates for accessories (Left MID, Right MID)
- Main board
- Main board + Sensors + cables
- Operating mechanism
- Racked in and out device
- Racking in and out lever
- Safety shutters for fixed part
- Side walls
- Sliding contacts/ Terminal Box
- Transparent cover
- Trip coil
- Trip Unit Battery
- Tripping mechanism
- Spring charging device
- Spring Charging lever
- Gray platform spare parts (trip units, Ekip Measuring modules, rating plugs).

For further details, please refer pag 296-301 or to ABB SACE Spare Parts Catalogue (1SDC001007D0203).

Circuit breaker

The new SACE Emax 2 family incorporates the same characteristics of strength and reliability that have always distinguished the tradition of ABB SACE air circuit breakers.

The new SACE Emax 2 circuit breakers, available in four sizes, are extremely compact due to their new dimensions: with reduced depths and heights, combined with standardized widths, they provide a solution for the most stringent installation requirements.

Safety is expected thanks to the double insulation of the live parts and total segregation of the phases. Furthermore, the new functional design of the SACE Emax 2 circuit breakers has been developed with the purpose of improving installation operations and use of the devices and accessories; making them simpler, more intuitive and safer.

Distinctive characteristics		Benefits
Simplicity of use and safety	- Ekip protection trip units are interchangeable from front of circuit breaker	Reduced times during the stages of: - installation - wiring - configuration - commissioning - maintenance
	- Rapid configuration of the Ekip trip units	
	- Electronic modules can be installed on terminal box without removing the electronic trip units and protection shield	
	- Electrical plug-in accessories can be installed from the front of circuit breaker	
	- New push-in terminal box allows rapid auxiliary connections	
	- Horizontal or vertical rear connections can be modified on-site by turning 90°	Increased level of safety
	- Accessorizing logic common to the entire family of circuit breakers	
	- Accessory cabinet and terminal box are stamped with accessory codes for easy identification	
	- Accessories area is separated functionally from the safety area	
	- Mechanical safety locks in open position are active when the front cover is removed	
- Guided racking in and out of the mobile part		

Sizes

The SACE Emax 2 circuit breakers, available in 4 sizes up to 6000A, provide:

- **Versatility**, where installation space is a critical and influential factor, such as naval applications, wind turbine towers or switchgear

- **Opportunities**, optimization of the dimensions of the electrical switchgear results in a potential reduction in the consumption of the materials used.

Circuit breaker

Versions

The SACE Emax 2 circuit breakers are available in both fixed and withdrawable versions. The withdrawable version is recommended in applications in which service continuity is a fundamental requirement.

Replacement of the moving part with a new device does not require any intervention on power connections or on auxiliary connections, thus permitting reset in the shortest time possible.

The fixed version, which is connected directly to power system through the circuit breaker terminals, is recommended in applications in which the need for space means that compact products are required without compromising product performance and accessory fit.

Fixed

1. Moving part
2. Sliding contacts
3. Fixed part
4. Terminal box
5. Racking-out mechanism
6. Racking-out guide rails
7. Pushbuttons
8. Data label and accessories

Withdrawable

Poles

SACE Emax 2 circuit breakers are available in three-pole and four-pole versions and can be used in all types of distribution systems. With the possibility of connecting the external current sensor, three-pole circuit breakers can be used efficiently even in systems in which the neutral conductor cannot be isolated.

The four-pole circuit breakers E1.2, E2.2 and E4.2 are always provided with full-size neutral pole with rated uninterrupted current-carrying capacity identical to the phase poles. The E6.2 circuit-breakers, due to their construction modularity, are available

with neutral set at 50 percent of normal supply and with full-sized neutral, so that the customer does not need to oversize the neutral unless strictly necessary.

The standard supplied circuit breakers are suitable for connection of phases in the sequence L1, L2, L3 for three-pole circuitbreakers, or N, L1, L2 and L3 for four-pole circuit breakers with neutral on the left; a special optional kit enables the position of the circuit breaker neutral to be changed to the right, making the sequence L1, L2, L3, N available (refer to page 265 for the commercial codes).

Circuit breaker	Standard version		Optional version with neutral on the right			
	Three-pole	Four-pole	Four-pole			
Emax E1.2	L1 X 	N X 	L1 X 	L2 X 	L3 X 	N X
Emax E2.2	L1 X 	N X 	L1 X 	L2 X 	L3 X 	N X
Emax E4.2	L1 X 	N X 	L1 X 	L2 X 	L3 X 	N X
Emax E6.2	L1 X 	N X 	L1 X 	L2 X 	L3 X 	N X

Circuit breaker

Terminals

The integration of the circuit breaker into an electrical system is simpler due to the connection terminals of the circuit breakers. The silver-plated copper terminals are designed to assist installation of connecting bars according to the change in the rated capacity of the circuit breaker. Each terminal has been created to the standard width of busbar

for that amperage and is equipped with one, two or three terminal stabs for easy connection to multiple bus runs that may be required for the application. For particular installation requirements, the circuit breakers can be equipped with different combinations of terminals for the upper and lower part.

Type	Abbreviation		E1.2	E2.2	E4.2	E6.2
Rear adjustable terminal (1)	HR VR		F, W	F, W	F, W	F, W
Front terminal	F		F	F, W **	F, W **	F, W **
Extended front terminal	EF **		F, W			
Front spread terminal	ES **		F, W			
Terminal for cable FcCuAl 4x500kcmil / 240mm2	Fc CuAl **		F			

(1) The rear adjustable terminals are supplied as standard in the HR-HR configuration, with exception for E4.2 L version, E4.2 3200A and E6.2 6000A in which they are supplied in VR - VR configuration.

(**) Not UL listed

Degree of protection

SACE Emax 2 circuit breakers provide the following degrees of protection:

- IP20 for circuit breakers in fixed or drawout versions, excluding the terminals.
- IP30 for the front parts of the circuit breaker when installed in switchgear with the IP30 flange mounted on the door.
- IP54 for circuit breakers equipped with optional IP54 transparent flange fixed on the door on the front of the switchgear.

Power losses

To provide the performance of the electrical switchgear in terms of rated uninterrupted current-carrying capacity, the design of the electrical switchgear must take into consideration the power losses by installed live parts.

The values in the table below refer to total power for three and four pole circuit breakers with balanced loads with a current flow equal to rated uninterrupted current "I_u" at 60Hz.

Circuit breaker type		[W]/[A]	250	400	800	1200	1600	2000	2500	3200	3600	4000	5000	6000
Fixed	E1.2 B-A, N-A, S-A	W	7	17	59	125								
	E2.2 B-A, N-A, S-A	W		15	48	100	170							
	E2.2 H-A, V-A / E2.2 2000A B-A, N-A, S-A	W		15	48	99	167	250						
	E4.2 S-A, H-A, V-A	W			44	86	143	211	310					
	E4.2 3200A/3600A S-A, H-A, V-A	W			42	81	132	193	280	445	578			
	E6.2 H-A, V-A	W								323	395	476	700	
Drawout	E1.2 B-A, N-A, S-A	W	14	35	118	250								
	E2.2 B-A, N-A, S-A	W		22	73	152	260							
	E2.2 H-A, V-A / E2.2 2000A B-A, N-A, S-A	W		22	68	138	233	350						
	E4.2 S-A, H-A, V-A	W			58	114	189	279	410					
	E4.2 3200A S-A, H-A, V-A	W			49	111	181	264	384	610				
	E6.2 H-A, V-A	W								438	536	646	950	1484

Circuit breaker

Temperature derating

Under specific installation conditions, the circuit-breakers can operate at higher temperatures than the reference temperature of 40 °C. In this case the current-carrying capacity of the circuit-breaker may be lower than the rated current-carrying

capacity at the reference temperature requiring the application of the derating coefficients as shown.

Percentage values refer to withdrawable and fixed circuit breaker.

If not specified, all data refer to a copper according to IEC60947.

Emax 2 E1.2		Temperature [°C/°F]						
		<40/104	45/113	50/122	55/131	60/140	65/149	70/158

Installation environment

SACE Emax 2 circuit breakers are designed and tested in accordance with major international Standards to manage the electrical plant.

The installation requirements prescribed by the international Standards are listed below.

In addition, ABB provides instructions for the use of circuit breakers in nonstandard environments, as for example personalized maintenance program or installation solutions aimed at increasing performances and extending the lifecycle of the circuit breaker.

Temperature

SACE Emax 2 circuit breakers can operate in the following environmental conditions:

	Temperature		
	Operating	Active Display	Storage
Emax 2 with Ekip DIP	-25°C ... +70°C -13°F...+158°F	-	-40°C ... +70°C -40°F...+158°F
Emax 2 with Ekip Touch, Hi-Touch	-25°C ... +70°C -13°F...+158°F	-20°C ... +70°C -4°F...+158°F	-30°C ... +70°C -22°F...+158°F
Emax 2 with LCD	-25°C ... +70°C -13°F...+158°F	-25°C ... +70°C -13°F...+158°F	-40°C ... +70°C -40°F...+158°F
Emax 2 switch-disconnectors	-25°C ... +70°C -13°F...+158°F	-	-40°C ... +70°C -40°F...+158°F

Installation environment

Environmental conditions

The devices can be installed in industrial environments with pollution level 3, IEC60947. SACE Emax 2 circuit breakers also comply with:

- IEC60721-3-6 class 6C3
- IEC60721-3-3 class 3C2

Altitude

SACE Emax 2 air circuit breakers do not change in rated performance up to 6600 feet. However, above 6600 feet, the properties of the atmosphere in terms of composition, dielectric capacitance, cooling power and pressure can vary and, therefore, the performance of the circuit breakers is subject to derating, which is capable of measurement by means of the variation in maximum rated service voltage and rated uninterrupted current.

Altitude	[ft]	6600	9900	13200	16500
	[m]	2000	3000	4000	5000
Rated service voltage - Ue	[V]	600	600	544	477
Rated current	[% In]	100	98	93	90

Vibration

The circuit breakers have been tested according to:

- IEC60068-2-6
- From 1 to 13 Hz with amplitude 1mm
- From 13 to 100 Hz with constant acceleration 0.7g
- IEC60721-3-1
- Storage: 1M3
- IEC60721-3-2
- Transport: 2M2
- IEC60721-3-3
- Operational conditions: 3M2
- Shipping registers or certifications

Electromagnetic compatibility

The use of certain devices in industrial installations may cause electromagnetic interference in the electrical system. SACE Emax 2 circuit breakers have been developed and tested for electromagnetic compatibility in accordance with IEC 60947-2; Appendices J and F, ANSI C37.90.1 and C37.90.2.

The four construction sizes and the reduced insulation distances required, allow SACE Emax 2 circuit breakers to optimize the installation spaces of the

compartments of electrical switchgear, thereby providing a rational solution to the customers' application needs.

Installation environment

SACE Emax 2 circuit breakers enable the improvement of electrical switchgear design, optimized performance and in the use of the main materials as follows:

- **Copper:** allows minimization of busbar length.
- **Metal frame and structure:** reduced volumes mean less surface space is used for panels and internal structures.
- **Space:** the optimization of the individual units benefits the entire switchgear by making the entire unit more compact and can therefore be installed taking up less surface space.

Traditional circuit breaker 3p lu 2000A

Emax E2.2 3p lu 2000A

Installation in switchgear

Position

All SACE Emax 2 circuit breakers can be floor mounted in a vertical position inside the switchgear compartment.

The E1.2 circuit breaker can also be installed in a horizontal position and wall mounted. Conveniently, the screens of the Ekip Touch and Hi-Touch versions rotate to a horizontal view for key data when the E1.2 is installed horizontally.

Power supply

The Emax 2 circuit breakers can be supplied, from either the upper or lower terminals. In the event a measurement module is present, in order to make use of all information when the circuit breaker is in the open position, the voltage sockets must be installed on the power supply side.

Insulation distances and connection

The circuit breakers can be connected to the main power system using the most common configurations and dimensions of copper bars.

Installation of live parts must ensure:

- Minimum insulation distances between the phases

Rated insulation voltage Ui	Minimum distance [mm]
1000V	The use of phase barriers is recommended for fixed version circuit breakers used in voltages over 480V.

• Insulation distance of installation cubicle

Fixed circuit breakers					Drawout circuit breakers

Installation in switchgear

- **Anchorage plates**

The electrodynamic force released during a short-circuit can cause high levels of mechanical stress on the devices and structures of the switchgear. To minimize this, fastening plates must be positioned near the circuit breaker terminals.

- **Tightening torques**

The following table indicates the values required for connecting the circuit breaker terminal and the connecting bars.

Terminals	E1.2	E2.2 / E4.2 / E6.2
Adjustable HR/VR rear	40 Nm / 354.03 lb-in	70 Nm / 619.55 lb-in
Spread rear	40 Nm / 354.03 lb-in	–
Front	40 Nm / 354.03 lb-in	70 Nm / 619.55 lb-in
Extended front	40 Nm / 354.03 lb-in	–
Spread front	70 Nm / 619.55 lb-in	–
Front for cables	43 Nm / 380.58 lb-in	–

- **Segregation plates and separator plates**

The rear part of the circuit breaker has been designed with specific slots in which insulating walls can be housed to facilitate segregation of live parts. In addition, phase barriers are available as an optional accessory for E1.2.

Earthing connection

To achieve continuity and equal potential of earthing between the Emax 2 circuit breaker and the protection circuit of the switchgear, customers can use either option below:

- Connect the Emax 2 fixed circuit breaker or the cradle of the drawout circuit breaker to the protective circuit by means of a cable with suitable cross-sectional area to fulfil the switchgear requirements.

- If the continuity of the circuit breaker frame with the switchboard earthing is provided by the metal contact (support) between the circuit breaker and the metal structure of the switchboard (which is a part of the protective circuit) no connection is necessary (provided that no panels of insulating material are interposed between the circuit breaker and the metal frame of the switchboard).

Emax E1.2, fixed version, does not require any earthing connection.

Installation in switchgear

Busbar types

The circuit breakers, via the terminals, can be connected to the main distribution system by busbars of different types: copper, silver-plated copper and tinned aluminium when the main distribution system is made of aluminium.

The circuit breakers can be connected directly with copper or aluminium cables in the case of E1.2 circuit breakers, or indirectly by cable-carrying bars in the case of E2.2, E4.2 and E6.2.

Bars recommendation

Frame	Iu	Vertical			Horizontal		
		Qty	Size (in)	Size (mm)	Qty	Size (in)	Size (mm)
E1.2	800	1	1/4 x 3	6.35 x 76.2	2	1/4 x 2	6.35 x 50.8
E1.2	1200	2	1/4 x 3	6.35 x 76.2	4	1/4 x 2	6.35 x 50.8
E2.2	1600	2	1/4 x 3	6.35 x 76.2	3	1/4 x 2.5	6.35 x 63.5
E2.2	1600	3	1/4 x 2	6.35 x 50.8	4	1/4 x 2	6.35 x 50.8
E2.2	2000	4	1/4 x 2	6.35 x 50.8	4	1/4 x 2.5	6.35 x 63.5
E4.2	2000	4	1/4 x 2	6.35 x 50.8	4	1/4 x 2.5	6.35 x 63.5
E4.2	2500	3	1/4 x 4	6.35 x 101.6	4	1/4 x 4	6.35 x 101.6
E4.2	3200	4	1/4 x 4	6.35 x 101.6	-	-	-
E4.2	3600	4	1/4 x 5	6.35 x 127	-	-	-
E6.2	4000	4	1/4 x 5	6.35 x 127	6	1/4 x 4	6.35 x 101.6
E6.2	5000	6	1/4 x 5	6.35 x 127	10	1/4 x 4	6.35 x 101.6
E6.2	6000	6	1/4 x 6	6.35 x 152.4	-	-	-

The tables should be used solely as a general guideline for selecting products. Due to the extensive variety of switchgear construction shapes and conditions that can affect the behavior of the apparatus, the solution used must always be verified.

Bars connection

The Emax 2 terminal design maximizes the thermal performance into the switchgear. Due to the busbar friendly, single to multiple stab design, can be easily and smartly:

- a wide contact surface between terminals and bars improves the current carrying capacity;
- a spacing between stabs and multi bars increase the ventilation efficiency on E2.2, E4.2 and E6.2;
- a 1/4" spacing eliminates the need to bend bars and allows for an easier connection to the main busbars.

Auxiliary connection

The new terminal box uses spring clamp technology. All cables can be connected to each terminal without tools, providing time saving during the wiring activities.

Circuit breakers

Operating state shown

The diagram is shown in the following conditions:

- withdrawable version circuit-breaker, open and racked-in
- with de-energized circuits
- trip units not tripped
- motor operator with unloaded springs.

Versions

The diagram shows a withdrawable version circuit-breaker, but it is also valid for fixed version circuit-breakers.

Fixed version

The control circuits are included between the XV terminals (the X connector is not supplied).

Withdrawable version

The control circuits are included between the poles of the X connector (the XV terminal box is not supplied).

Description of figures

- 1) Supplementary open/closed auxiliary contacts of the circuit-breaker - AUX 6Q (6 Form C)
- 2) Ekip Signalling 4K
- 11) Trip signalling contact
- 12) Contact for signalling position of loaded springs - S33 M/2
- 13) Motor for loading closing springs- M
- 14) Remote reset - YR
- 20) Measurement Enabler/Measurement Enabler with voltage sockets inside the four-pole circuit breaker
- 21) Measurement Enabler/Measurement Enabler with voltage sockets inside the three-pole circuit breaker and connection to the external neutral
- 22) Measurement Enabler/Measurement Enabler with voltage sockets for residual voltage protection (for Ekip G only)
- 23) Measurement Enabler/Measurement Enabler with voltage sockets with external voltage transformer
- 24) Rc residual current protection sensor input
- 25) Transformer star center sensor input
- 26) Zone selectivity
- 27) Current sensor input on external neutral (only for 3-pole circuit-breakers)
- 31) Direct auxiliary supply 24V DC and local bus - Ekip Supply
- 32) Auxiliary supply through module 110-240V AC/DC or 24-48V DC and local bus - Ekip Supply
- 41) Ekip signalling 2K-1
- 42) Ekip signalling 2K-2
- 43) RELT Ekip signalling 2K-3
- 48) Ekip sinchrocheck

Circuit breakers

Key			
*	= See the note indicated by the letter	O 01...32	= Programmable signalling contacts of the EKIP protection trip unit
A1	= Applications located on the mobile part of the circuit-breaker	O SC	= EKIP protection trip unit contact for synchronism control
A3	= Applications located on the fixed part of the circuit-breaker	Q	= Circuit-breaker
A4	= Indicative devices and connections for control and signalling, outside the circuit-breaker	Q/1...Q/25	= Auxiliary contacts of circuit-breaker
BUS1	= Serial interface with external bus	Q/26...Q/27	= Auxiliary open/close contacts used internally by the trip unit
D	= Electronic time-lag device of YU undervoltage coil, outside the circuit-breaker	RC	= RC (residual current) protection sensor
F1	= Time-delayed trip fuse	RT1...RT3	= Temperature sensors
GZi(DBi)	= Zone selectivity input for G protection or input in "reverse" direction for D protection	RTC EKIP	= Auxiliary ready to close contact of circuit-breaker, used internally by the trip unit
GZo(DBo)	= Zone selectivity output for G protection or output in "reverse" direction for D protection	RTC	= Contact for signalling circuit-breaker is ready to close
I O1...32	= Programmable digital inputs of the EKIP protection trip unit	S33M/1...2	= Limit contacts of spring loading motor
K51	= Electronic overcurrent protection trip unit of the types: EKIP DIP, EKIP TOUCH, EKIP LCD, EKIP HI-TOUCH, EKIP HI-LCD, EKIP G TOUCH, EKIP G LCD, EKIP G HI-TOUCH, EKIP G HI-LCD	S43	= Switch for presetting remote/local control
K51/COM	= Communication module	S51	= Trip signalling contact
K51/MEAS	= Measurement module	S75E/1...4	= Contacts for signalling circuit-breaker in racked-out position (provided only with withdrawable version)
K51/SIGN	= Signalling module	S75I/1...5	= Contacts for signalling circuit-breaker in racked-in position (provided only with withdrawable version)
K51/SUPPLY	= Optional auxiliary supply module (110-220VAC/DC and 24-48VDC)	S75T/1...2	= Contact for signalling circuit-breaker in test position (provided only with withdrawable version)
K51/SYNC	= Synchronization module	SC	= Pushbutton or contact for closing the circuit-breaker
K51/YC	= Closing control from the EKIP protection trip unit	SO	= Pushbutton or contact for immediate opening of the circuit-breaker
K51/YO	= Opening control from the EKIP protection trip unit	SO1	= Pushbutton or contact for opening the circuit-breaker with time-delayed trip
M	= Motor for loading closing springs		

SR	= Pushbutton or contact for electrical resetting of S51trip contact	XV	= Delivery terminal box for auxiliary circuits of fixed version circuit-breaker
SZi(DFi)	= Input for zone selectivity for S and I protection or input in "direct" direction for D protection	YC	= Closing coil
SZo(DFo)	= Output for zone selectivity for S and I protection or output in "direct" direction for D protection	YC2	= Second closing coil
TI/L1	= Current transformer phase L1	YO	= Opening coil
TI/L2	= Current transformer phase L2	YO1	= Opening coil for overcurrent
TI/L3	= Current transformer phase L3	YO2	= Second opening coil
TI/N	= Current transformer on neutral	YR	= Coil for electrical resetting of trip contact S51
TU1...TU2	= Insulation voltage transformer (outside circuit-breaker)	YU	= Undervoltage coil
Uaux	= Auxiliary supply voltage		
UI/L1	= Current sensor phase L1		
UI/L2	= Current sensor phase L2		
UI/L3	= Current sensor on phase L3		
UI/N	= Current sensor on neutral		
UI/O	= Single-pole current sensor		
W2	= Serial interface with internal bus (local bus)		
W9...W13	= RJ45 connector for communication modules		
W9R.W11R	= RJ45 connector for redundant communication modules		
X	= Delivery connector for auxiliary circuits for withdrawable version of circuit-breaker		
XB1...XB7	= Connectors for circuit-breaker applications		
XF	= Delivery terminal board for position contacts of withdrawable version of circuit-breaker		
XK1...XK3	= Connectors for auxiliary circuits of the EKIP protection trip unit		
XK7	= Connector for auxiliary circuits of communication module		

Reading information

Circuit breakers

Notes

- A) Auxiliary supply for Ekip trip unit is mandatory (refer to diagram 1SDM00009R0001 figures 31 - 32- 33 - 34).
- B) When there are mixed auxiliary contacts Q1 and Q2 are 400V, while Q3 and Q4 are 24V. Then Q5, Q6, Q7 are 400V, while Q8, Q9, Q10 are 24V.
- C) Always supplied with Ekip Com module.
- D) Always supplied with motor for loading closing springs in Fig. 13.
- E) Obligatory voltage transformer in the case of external sockets. Obligatory external sockets for systems with rated voltage greater than 690V.
- F) The connections between the RC residual current protection sensor and the poles of the X connector (or XV) of the circuitbreaker must be made with 4-pole shielded cable with conductors interwoven in pairs (type BELDEN 9696 paired or equivalent), of a length no greater than 10 m. The shield should be grounded on circuit-breaker side.
- G) With all electronic protection trip units equipped with display interface with LSIG protections, protection against a ground fault is available (Gext) by means of current sensor positioned on the star center of the MV/LV transformer. The connection between terminals 1 and 2 of the UI/O current transformer and Ge+ and Ge- poles of the X connector (or XV) must be made with shielded and stranded 2-pole cable (type BELDEN 9841 or equivalent) of length no greater than 15 m.
- H) The connection between the terminal box and external neutral sensor must be made with the 2m cable provided. For three pole circuit-breakers, the Ne+ and Ne- poles of the X connector (or XV) must be short-circuited if no sensor is present on the external neutral conductor.
- I) Obligatory in the case of the presence of any Ekip module.
- J) Only for E2.2, E4.2 and E6.2 withdrawable version circuit-breakers as an alternative to Fig. 31-32-34.
- K) Only for E2.2, E4.2 and E6.2 withdrawable version circuit-breakers as an alternative to Fig. 31-32-33.
- K) Only for E2.2, E4.2 and E6.2 withdrawable version circuit-breakers as an alternative to Fig. 31-32-33.
- L) In the presence of Fig. 32, for E2.2, E4.2 and E6.2 circuit-breakers up to three applications between Fig. 41...58 taken only once can be supplied, instead for E1.2 circuit-breakers, up to two applications between Fig. 41...58 taken only once can be supplied. The Ekip Com module selected can be duplicated if required, by choosing between Fig. 61...66.
- M) In the presence of Fig. 33, for E2.2, E4.2 and E6.2 circuit-breakers, up to two applications between Fig. 41...58 taken only once can be supplied. The Ekip Com module selected can be duplicated if required, by choosing between Fig. 61...66.
- N) In the presence of Fig. 34, for E2.2, E4.2 and E6.2 circuit-breakers, a single application between Fig. 41...58 can be supplied.
- O) In the presence of several Ekip Com modules with withdrawable version circuit-breakers, the contact S75I/5 should be connected only once to a single module.
- P) The auxiliary voltage Uaux. enables activation of all the functions of the Ekip electronic protection trip units. Since an earth insulated Uaux was requested, it is necessary to use "galvanically separated convertors" which comply with the standards IEC 60950 (UL 1950) or equivalent, which provide a common mode current or leakage current (refer to IEC 478/1, CEI 22/3) no greater than 3.5mA, IEC 60364-41 and CEI 64-8.
- Q) Regarding local bus the maximum cable length is 15m.
- R) Suggested RJ45 cable: CAT6 STP.
- T) Connect terminals 120 Ω on to insert a termination resistance on the Local Bus.

Racked out Position Lock (Supplementary)	K ⁽³⁾	L	M	N	P
PLP + Racked out Position Lock	Q	R	S	T	U

1) Standard key for Same Key option is #20005. Locks for #20006 - 20009 are available for order as loose accessories.

2) Two Castell adapter cannot be used at once, but can be used in either position with another style of lock

3) Available for E2.2-E6.2 and only if a racking lock option has been selected on the circuit breaker side

Note: Racking locks are for E1.2 For E2.2 - E6.2 they are configured within the circuit breaker

9 - 2nd Racking Lock Options

None	X	Keylock in racked in/ out - Same Keys (KLP-S) ⁽¹⁾	Keylock in racked in/ out - Different Keys (KLP-D) ⁽¹⁾	Keylock in racked in/ out - Kirk/Ronis/ Profulaux provisions (KLP-A) ⁽¹⁾	Keylock in racked in/ out - Castell provisions (KLP-A) ⁽²⁾
	-	B	C	D	E

1) Standard key for Same Key option is #20005. Locks for #20006 - 20009 are available for order as loose accessories.

2) Two Castell adapter cannot be used at once, but can be used in either position with another style of lock.

Note: Racking locks are for E1.2 For E2.2 - E6.2 they are configured within the circuit breaker

Instructions for ordering

Ordering examples

Standard version Emax 2 series circuit breakers are identified by codes that can be accessorized.

Ordering examples

- **Terminal kit codes** (other than standard supply) for fixed circuit breakers or cradles.
The codes refer to 3 or 4 pieces for mounting on either the top or bottom terminals.

To convert a complete circuit breaker, 1 kit for upper terminals and 1 kit for lower terminals must be specified on the order.

Example no. 1

Emax E2.2N 3 poles fixed with vertical rear terminals (VR)

1SDA077293R1	E2.2N-A 2000 Ekip Touch LSIG 3p F HR
1SDA079852R1	Kit VR Upper E2.2 lu=2000 3pcs INST
1SDA079854R1	Kit VR Lower E2.2 lu=2000 3pcs INST

Example no. 2

Emax E1.2N 4 poles fixed with upper vertical rear (VR) and lower front (F) terminals (standard supply)

1SDA077020R1	E1.2N-A 1200 Ekip Dip LSIG 4p F F
1SDA079837R1	Kit VR Upper E1.2 lu=1200 4pcs INST

- **Rating plug for lower rated current values.**
Rating plugs installed on the circuit breaker allow for rated current values that are lower than the rated current of the circuit breaker.

Example no. 3

Emax E2.2S 2000 3 poles fixed In=1000A

1SDA077333R1	E2.2S-A 2000 Ekip Touch LSIG 3p F HR
1SDA074264R1	Rating Plug 1000A E1.2...E6.2 INST

- **Ordering Ekip modules.**
The Ekip Supply module enables Ekip Com, Ekip Link, Ekip 2K and Ekip Synchrocheck modules to be installed.
In addition to the Ekip Supply module, up to 3 additional modules can be installed on E2.2, E4.2 and E6.2 and up to 2 additional modules on E1.2.

Example no. 4

Emax E4.2H 3 poles fixed with modules: Ekip Supply, Ekip Com Modbus TCP, Ekip Signalling 2K, Ekip Com Modbus RCP Redundant and Ekip Signalling 4K

1SDA077926R1	E4.2H-A 3200 Ekip Hi-Touch LSIG 3p F HR
1SDA074173R1	Ekip Supply 24-48V DC E1.2..E6.2
1SDA074151R1	Ekip Com Modbus TCP E1.2..E6.2
1SDA074158R1	Ekip Com R Modbus TCP E1.2..E6.2
1SDA074167R1	Ekip Sign. 2K-1 E1.2..E6.2
1SDA074170R1	Ekip Sign. 4K E2.2..E6.2

Example no. 5

Emax E4.2H 3 poles fixed with modules: Ekip Supply, Ekip Com EtherNet/IP, Ekip Com Modbus RS-485 and Ekip Measuring Pro

1SDA077923R1	E4.2H-A 3200 Ekip Touch LSIg 3p F HR
1SDA074173R1	Ekip Supply 24-48V DC E1.2..E6.2
1SDA074155R1	Ekip Com EtherNet/IP E1.2..E6.2
1SDA074150R1	Ekip Com Modbus RS-485 E1.2..E6.2
1SDA074189R1	Ekip Measuring Pro E4.2

Example no. 6

Emax E1.2N 4 poles fixed with modules: Ekip Supply and Ekip Link

1SDA077020R1	E1.2N-A 1200 Ekip Dip LSIg 4p F F
1SDA074172R1	Ekip Supply 110-240V AC/DC E1.2..E6.2
1SDA074163R1	Ekip Link E1.2..E6.2

- Ordering for electrical accessories.

Example no. 7

Emax E2.2S 3 poles drawout with accessories: shunt coil, closing coil, motor and second shunt coil

1SDA077662R1	E2.2S-A 1600 Ekip Touch LSI 3p WMP
1SDA073674R1	YO E1.1..E6.2 220-240V AC/DC
1SDA073687R1	YC E1.2..E6.2 220-240V AC/DC
1SDA073725R1	M E2.2..E6.2 220-250V AC/DC
1SDA073674R1	YO E1.2..E6.2 220-240V AC/DC

- Ordering for locks.

Example no. 8

Emax E2.2N 3 poles with double key lock in racked in / test / racked out position, using different keys

1SDA077293R1	E2.2N-A 2000 Ekip Touch LSIg 3p F HR
1SDA073806R1	KLP-D Bl. Racked in/out E2.2..E6.2 1st key
1SDA073812R1	KLP-D Bl. Racked in/out E2.2..E6.2 2nd key

General informations

Abbreviations used for the description of the product

Versions and terminals	
F	Fixed circuit breaker
W	Drawout circuit breaker
MP	Mobile part of drawout circuit breaker
FP	Fixed part (Cradle) of drawout circuit breaker
Iu	Rated uninterrupted current
In	Rated current of the rating plug
Icu	Rated ultimate short-circuit breaking capacity
Icw	Rated short-time withstand current
/MS	Switch disconnecter
/E	Circuit breakers for 1150V applications
/f	Four-pole circuit breakers with neutral pole at 100%
CS	Sectionalizing truck
MT	Earthing truck
MTP	Earthing switch with making capacity
HR VR	Rear orientable terminals
SHR	Horizontal rear spread terminals
SVR	Vertical rear spread terminals
F	Front terminals
FL	Flat terminals
EF	Extended front terminals
ES	Front spread terminals
Fc CuAl	Terminals for cables
Protection trip units and functions	
Ekip Dip	Protection trip unit for power distribution
Ekip Touch	Measurement and protection trip unit for power distribution
Ekip Hi Touch	Measurement and protection trip unit and network analyzer for power distribution
Ekip G Touch	Measurement and protection trip unit for generators
Ekip G Hi-Touch	Measurement and protection trip unit and protection network analyzer for generators
L	Overload protection
S	Protection against selective short circuit
I	Protection against instantaneous short circuit
G	Earth fault protection
Rc	Residual current protection
Power Controller	Load management function

Automatic circuit breakers

The multiple-standard Emax2 can be ordered lin the same way you accessories are ordered:

1. Select the right UL circuit breaker you need;
2. Like an accessory configuration, upgrade the circuit breaker with multi-standard performance by adding the code shown above.

E6.2	Measurement Enabler E6.2	1SDA107549R1	ZE6MEAMOD
E6.2	Measurement Enabler with voltage sockets E6.2	1SDA107550R1	ZE6MEASOC
E1.2 ⁽¹⁾	Voltage socket for neutral on right side L1 L2 L3 N - E1.2	1SDA076244R1	ZE1MEASOCNRT
E2.2 ⁽¹⁾	Voltage socket for neutral on right side L1 L2 L3 N - E2.2	1SDA076245R1	ZE2MEASOCNRT
E4.2 ⁽¹⁾	Voltage socket for neutral on right side L1 L2 L3 N - E4.2	1SDA076246R1	ZE4MEASOCNRT
E6.2 ⁽¹⁾	Voltage socket for neutral on right side L1 L2 L3 N - E6.2	1SDA076247R1	ZE6MEASOCNRT

1) Suitable for circuit-breakers with neutral on the right side (L1 L2 L3 N)

2) The Measurement Enabler module is provided as standard with Ekip Touch trip units. Select the Measuring Package to activate measurements (V, f, P, E, ...). The Measurement Enabler with voltage sockets module is provided as standard with Ekip Hi-Touch, G Touch and G Hi-Touch trip units. Measurements are also provided as standard, with no need to activate the dedicated software package. Both these modules are available as spare parts.

Min quantity = min quantity to complete a circuit-breaker: The quantity is related to the number of phases (3 or 4 pole) of the circuit-breaker (E6.2 has half phases so quantities are double). Type A Spare part = only for ABB L3 technicians

E1.2	3p	IEC	F	1SDA081176R1	A	1
E1.2	4p	IEC	F	1SDA081177R1	A	1
E2.2	3p	IEC	F	1SDA081234R1	A	1
E2.2	4p	IEC	F	1SDA081235R1	A	1
E4.2	3p	IEC	F	1SDA081236R1	A	1
E4.2	4p	IEC	F	1SDA081237R1	A	1
E6.2	3p	IEC	F	1SDA081238R1	A	1
E6.2	4p	IEC	F	1SDA081239R1	A	1
E6.2	4p/f	IEC	F	1SDA081240R1	A	1

For each part ordered, specify the Serial number of the circuit-breaker it is intended for; * moving part terminals not included

Conversion kit from Moving Part into Fixed version *

Size	Poles	IEC/UL	Version	Global PN	Type spare	Min quantity
E1.2 - wall mounted	3p; 4p	IEC/UL	W (MP)	1SDA081178R1	A	1
E1.2 - floor mounted	3p; 4p	IEC/UL	W (MP)	1SDA082303R1	A	1
E2.2; E4.2; E6.2	3p; 4p	IEC/UL	W (MP)	1SDA081241R1	A	1

For each part ordered, it is mandatory to specify the Serial number of the circuit-breaker it is intended for; 1) Standard terminals not included

Main board

Size	Poles	IEC/UL	Version	Global PN	Type spare	Min quantity
E1.2	3p; 4p	IEC/UL	F; W (MP)	1SDA081408R1		1
E2.2; E4.2; E6.2	3p; 4p	IEC/UL	F; W (MP)	1SDA081450R1		1

For each part ordered, it is mandatory to specify the Serial number of the circuit-breaker it is intended for.

Trip Unit Battery

Size	Poles	IEC/UL	Version	Global PN	Type spare	Min quantity
E1.2; E2.2; E4.2; E6.2	3p; 4p	IEC/UL	F; W (MP)	1SDA074193R1		1

Main board + Sensors + cables

Size	Poles	IEC/UL	Version	Global PN	Type spare	Min quantity
E2.2	3p	IEC/UL	F; W (MP)	1SDA081200R1	A	1
E2.2	4p	IEC/UL	F; W (MP)	1SDA081201R1	A	1
E4.2	3p	IEC/UL	F; W (MP)	1SDA081202R1	A	1
E4.2	4p	IEC/UL	F; W (MP)	1SDA081203R1	A	1
E6.2	3p	IEC/UL	F; W (MP)	1SDA081204R1	A	1
E6.2	4p	IEC/UL	F; W (MP)	1SDA081205R1	A	1
E6.2	4p/f	IEC/UL	F; W (MP)	1SDA081206R1	A	1

For each part ordered, it is mandatory to specify the Serial number of the circuit-breaker it is intended for.

Sensors plastic covers

Size	Poles	IEC/UL	Version	Global PN	Type spare	Min quantity
E2.2	3p; 4p	IEC/UL	F; W (MP)	1SDA081468R1		1
E4.2	3p; 4p	IEC/UL	F; W (MP)	1SDA081469R1		1
E6.2	3p; 4p; 4p/f	IEC/UL	F; W (MP)	1SDA081470R1		1

Terminal covers

Size	Poles	IEC/UL	Version	Global PN	Type spare	Min quantity
E1.2	3p	IEC/UL	W (MP)	1SDA081182R1		1
E1.2	4p	IEC/UL	W (MP)	1SDA081183R1		1

Terminal box fixed part

Size	Poles	IEC/UL	Version	Global PN	Type spare	Min quantity
E1.2	3p; 4p	IEC/UL	W (FP)	1SDA081180R1	A	1
E2.2; E4.2	3p; 4p	IEC	W (FP)	1SDA082152R1	A	1
E6.2	3p; 4p; 4p/f	IEC	W (FP)	1SDA082153R1	A	1

Support for terminal box of Fixed Part

Size	Poles	IEC/UL	Version	Global PN	Type spare	Min quantity
E1.2	3p	IEC/UL	W (FP)	1SDA082237R1	A	1
E1.2	4p	IEC/UL	W (FP)	1SDA082238R1	A	1
E2.2	3p	IEC/UL	W (FP)	1SDA081249R1	A	1
E2.2	4p	IEC/UL	W (FP)	1SDA081250R1	A	1
E4.2	3p	IEC/UL	W (FP)	1SDA081251R1	A	1
E4.2	4p	IEC/UL	W (FP)	1SDA081252R1	A	1
E6.2	3p	IEC/UL	W (FP)	1SDA081253R1	A	1
E6.2	4p	IEC/UL	W (FP)	1SDA081254R1	A	1
E6.2	4p/f	IEC/UL	W (FP)	1SDA081255R1	A	1
