Switch panel for harsh environments with integration of electromechanical components

Based on its expertise in varied and complementary technologies, APEM develops specific switch panels integrating several functions. This solution allows the company to offer custom equipment at optimal cost.

For the switch panel shown here, a stainless steel fascia has been associated with LED's, pushbuttons, a key lock, an emergency stop switch and some handles, as many functions required by the customer's application. Key marking is made by chemical etching, a process ensuring high wear resistance and allowing several colors.

This equipment is very robust, sealed, easy to clean and thus perfectly adapted to the industrial environment for which it is intended.

Contact APEM for custom designs & manufacturing.

News Alert

You can expect an APEM Newsletter monthly to keep you up to date on APEM News.

In the top left corner, you will see our "Did you know?" section. The answer will change each month to a new APEM fact.

In the bottom right corner you will find our Customer Service & Technical Support contact information.

In the next few months, APEM will be launching new products. Look for upcoming announcements.
