$\square$ Built-in-safety

The A02ES-H series has been designed to ensure the highest security level. By design, this product has a failsafe modular construction.
Many other emergency stop switches are not failsafe and rely on butt action contacts: the NC contats remain closed until the actuator is pressed. Therefore, if the switch is damaged, destroyed or assembled incorrectly, the contacts remain closed. On the A02ES-H, if the operator or switch block become separated, the circuit will open.
