

Power Selector for E-Series Breakers

Carling Technologies' compact new E-Series power selector comes assembled on the breaker, and fits in a standard E-series panel cut-out. This power selector allows the user to transfer between shore power and on-board power systems.

This new power selector is available in four and six pole configurations, and offers the same transfer switch functionality as Carling's after-market Power Selector kit, but in a more compact design.

Product Availability: Samples and production quantities are immediately available.

Ordering Specifics: The E-Series Power Selector is specified when ordering the breaker. Contact factory for ordering details.

Carling Technologies is one of the world's largest manufacturers of Hydraulic Magnetic and Thermal Circuit Breakers, Electrical Switches and Assemblies, and Advanced Systems including Power Distribution Centers, Digital Switching Systems, and Electronic Controls. Carling products are used worldwide in diverse industries including Appliance, Electronics/Telecom, Medical, Transportation, Industrial Controls & Factory Automation, and Commercial Facilities Control. A world leader in the markets it serves, Carling is committed to making continuous improvement in every product and service it offers, and to providing outstanding world-class customer service. Contact us for more information on our new E-Series Power Selector, and the complete line of Carling products.
