

OCTAL & UNDECIMAL STYLE MALE HEADERS

Custom Connector expands its Octal Style male headers to include a thru pin version in both an 8-Pin and 11-Pin style. These sockets further expand the current large offering of the GB08 & TB08 Cylindrical Headers, the FB08, and FB11 square based headers, and the current rectangular based HB08 and HB11 headers. These newly introduced headers represent another innovative Custom Connector design to meet our customers' ever expanding needs. They are both cost and labor effective, making them the best value in the market.

We will be offering the custom ability to connect an HB08D or HB11D directly to your own designed PCB board without having to solder wires. Below are some pictures of one design of the interface to connect to a PCB board of your own design.
