***ELECTRICAL ENCLOSURES
AND MODULAR CABINETS***

19

EXM MANUFACTURING LTD.
Since 1975

EXM... The special's specialist.

Web-based drawing software

In the quest to perfect its value added services, EXM has developed a state of the art intelligent product configurator. This web-based drawing automation software enables any registered user to create the product configuration required and **within minutes obtain drawings, a bill of material and quotation**. CAD files are available in 3D (STP) or 2D (.DXF).

The exclusive advantage of **BoxCAD** is the ability to create in **3 simple steps** a product configuration with **custom color, custom cutouts, custom mounted hardware, custom size and custom accessory assemblies throughout**.

The objective is to **increase efficiency and reduce time delivery**, by eliminating **back and forth communication** between distributors and EXM engineers.

It's now a question of days before you receive your order!

BOXCAD

BOXCAD is an electrical enclosure configurator developed and used internally by EXM before it was made available to the public in 2005. It is used to facilitate the design of custom electrical boxes.

BOXCAD offers an easy to use platform that allows you to quickly configure electrical enclosures in any sizes and colour. In fact, BOXCAD allows you to design your custom enclosure in only a few steps.

EXM innovated by offering it's customers a user-friendly platform that allows its users to directly configure a custom electrical enclosure, whether or not that person has knowledge of CAD software.

Look for the BOXCAD logo to see if the enclosure model is available in BOXCAD.

Data subject to change without notice.

WHY USE BOXCAD ?

Custom Manufacturing Made Accessible

The industry demands products that are custom made and responding to specific needs. To meet this demand, EXM adapted its manufacturing model to offer a product made to measure at the best possible cost.

BOXCAD offers an easy to use interface that allows you to fully access the modification capabilities offered by EXM.

Your dimensions; With BOXCAD it is possible to define the dimensions required for your enclosure. Set the size of your box using a size ruler, which takes into account the production capacity of EXM while maintaining the required certifications.

Your cutouts; Use the Drag & Drop interface of BOXCAD in order to position holes and knockouts essential to your configuration. All holes will be made before painting, which will prevent you from making time-consuming paint touch-ups.

Your colors; Choose from a wide variety of paint colors and finishes. You immediately receive the price associated with this change and will avoid paint supply delays

Furthermore, BOXCAD allows you to add several accessories; threaded studs, different types of windows, options, temperature control solutions and much more.

BOXCAD, it's like having your own manufacturing facility!

Quality Service & Support

Get your own library of cutouts and accessories in BOXCAD. Ask EXM to make your special design enclosures available in BOXCAD.

The BOXCAD team is dedicated to offer the support required to complete your electrical enclosure design projects. We encourage our customers to contact us directly in order to get help

Ask your EXM representative to register for one of our training seminars. Training seminars are conducted by accredited trainers and enable you to obtain a recognized BOXCAD training certificate.

Data subject to change without notice.

XX

WHY USE BOXCAD ?

BOXCAD Results

Technical Drawings

BOXCAD allows users to easily obtain technical drawings without having to place an order.

2D Drawings; Drawings in 2D .pdf and .dxf formats will facilitate the elaboration of your specifications and schemas, as you will get the full details of your EXM enclosure configuration.

3D Drawing; A drawing in .stp format will allow you to import your EXM enclosure to the vast majority of CAD systems. This represents a genuine advantage since it is no longer necessary to draw electrical boxes.

Quotation

BOXCAD is a powerful quotation tool that offers accurate pricing through an automated process. In fact, with BOXCAD you will automatically receive a quotation by email, you will no longer need to make requests for quotes or make stressful follow-ups.

Compliance & Ease

BOXCAD allows modifying electrical enclosures while respecting the rules required for approval. In fact, your configuration will meet all requirements mandatory by CSA & UL according to the chosen enclosure model.

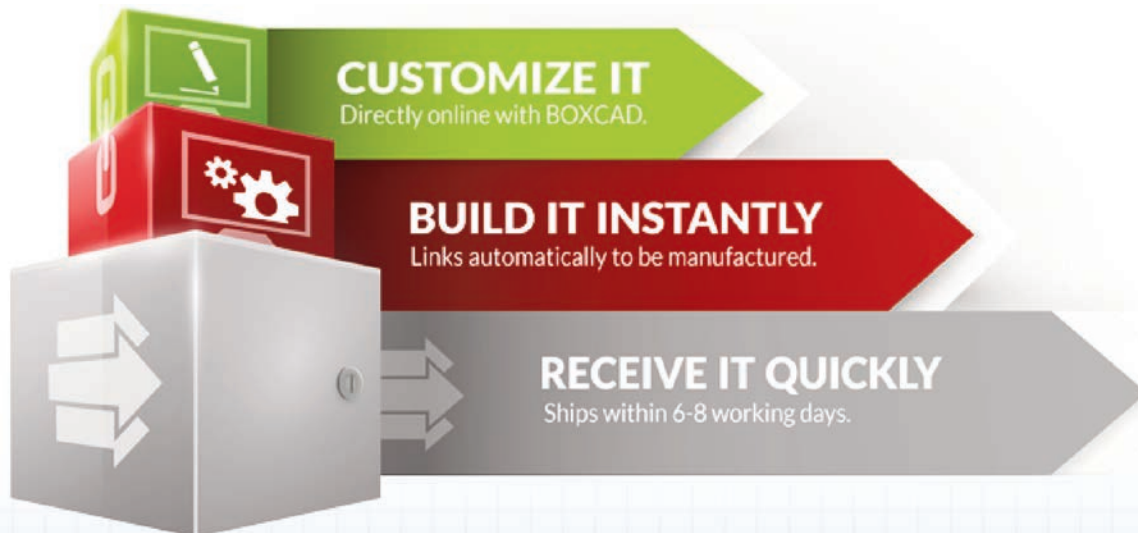

In addition to facilitating the design, BOXCAD eliminates an exhausting communication process. BOXCAD directly provides drawings of the design and a quotation. With BOXCAD, you'll receive all required documents to place an order in good and due form.

Your BOXCAD in 6 days*

One of the most decisive advantages of BOXCAD is the production speed of your electrical box. Whether for an order of 1 or more than 100 boxes, your order will be treated as a priority.

This production time is unrivalled in the industry. In addition to obtaining your enclosure on short notice, you will receive it ready to be assembled with your components, thus facilitating your assembly and saving valuable time.

Data subject to change without notice.

*The estimated production time is based on the number of business days needed to manufacture the ordered products, the time needed to process and package the shipment and to send it to our shipping dock(s). Although every effort is made by EXM to ship an order by a stipulated shipping date, the production times provided by EXM are estimates only and EXM is not responsible for the consequences, direct or indirect, of a failure to ship a shipment by an estimated shipping date, including when an expedited freight service request is made.

xxi

WHAT'S NEW?

1. The new Polycarbonate family of enclosures

The 5600 ESPL series are made of a polyester and polycarbonate hybrid blend, aesthetically designed and produced exclusively by EXM. It is the material of choice for numerous industrial applications. Its electrical, chemical and physical properties allow use in many environments and for a wide variety of applications. Additionally, a window version of the 5600 ESPL is available com-

pleting the family of EXM's polycarbonate enclosures. The models are offered with a screw cover option or with covers that uses draw pull catches. A high quality molded gasket ensures a complete NEMA 6P seal. Many accessories are available to complete the many sizes offered of the 5600 ESPL enclosures.

See page: 386

2. The new padlockable handle (zinc and stainless steel)

The new 880 APH padlockable handle (zinc and stainless steel) The new padlockable handle is a versatile, ergonomic and robust handle that may be used for a wide range of applications. The unique design of the "L" handle offers a padlock provision for increased security and accommodates single or multi-point latching. Plus, the housing of the handle acts as a drip shield and

offers additional protection against vandalism. The handle seals against dust and water penetration, making it ideal for applications that requires an IP-65 rating. This heavy-duty handle is available with a key insert, with a slotted built-in spring-loaded defeater function or in a non-locking version.

See page: 512

3. NEMA 3 Enclosure in Galvanized

The new 5300 ESG model incorporate an integrated drip shield making it an excellent solution for outdoor use. The heat fused polyester powder paint over galvanized steel provides a proper protection against corrosion. The enclosure also features a flange

mounted padlock provision that offers the option to add a lock in order to secure the enclosure.

See page: 260

4. NEMA 3 Sloped top models

The new 5300 EST and re-designed 5300 MC incorporate a sloped top that allows water to easily flow off both ends of the enclosure. This improvement to

the construction of these enclosure models is a genuine advantage for outdoors use.

See page: 262

Data subject to change without notice.

WHAT'S NEW?

5. Weatherproof box

The **5300 EWB weatherproof enclosures** feature all the necessary characteristics expected for an enclosure used in the outdoors. The top of this new enclosure acts as a drip shield and sun shield. Additionally, it incorporates a ventilation system combined with an included thermostat to regulate the inside temper-

ature. The heat fused polyester powder paint over galvanized steel provides a proper protection against corrosion.

See page: 264

6. Foldable straight section

The new **1100 SSF** redefines the concept of straight sections with its clever design. The major improvement of the 1100 SSF is that it can be folded in half to facilitate their handling. Furthermore, the shortened length of the straight sections

permits transportation using regular means of transit. Plus their shortened length makes them easier to store. Not to mention that the installation process is greatly facilitated due to the pre-installed grounding kits !

See page: 404

7. Stainless steel wireway

The new **1150 series stainless steel wireway** are available in 120" length complete with perforation or without. This wireway series is ideal to secure cables for many industries such as the food & beverage. Complete with

an impressive list of accessories, this latest series of stainless steel wireways is a significant addition to the EXM product line.

See page: 411

8. Re-design and improved wireway

The **1500 series wireway** was completely redesigned and now combines a more robust construction along with an increased accessibility. The conception of the new bridges used on the sections facilitates the operation to lay-in and out wires. In fact, the

wireway can be opened without any tool, simplifying the management of wires. Plus, the conception of this wireway now complies with NEMA4 requirements.

Data subject to change without notice.

Oil & dust tight metric modular cabinets

The Mtrx series cabinets are used to protect equipment against oil, dust and light water splashing for indoor applications.

The standard cabinets are available in steel. However Mtrx cabinet external covers can be made

of aluminum, brushed or powder coated stainless steel, and with EMI/RFI shielding.

Available in single, double and multi bay standard or disconnect configurations, the Mtrx cabinets can be ordered in complete

pre-assembled kits or can be fully customized by ordering individual parts.

The Mtrx series cabinets are designed and manufactured in North America exclusively by EXM.

Industry Standards

- UL Listed
- CSA Certified
- NEMA/EEMAC
- CE (IEC60529; IP55)
- RoHS Compliant

Customize with

Oil & dust tight metric modular cabinets

Frame:

- 10 bend closed profile roll-formed electrogalvanized posts
- Fully welded load bearing structure with steel cast corners
- 25mm DIN system hole pattern in all axes height, width & depth
- M12 x 1.75 25mm long threaded hole for installation of lifting or supporting h/w directly into structural frame
- Standard powder coated fine texture dark gray finish (RAL7011)
- 150 standard sizes – **close to 500 custom sizes available**
- Multi-bay / multi-door line-up capable

Doors and External Covers (Top, Bottom, Rear, Sides):

- 14ga or 16ga as per UL / CSA requirements
- Standard two tone textured powder coated finish – top / bottom: dark gray RAL7011; door / rear / sides: light gray RAL7035
- Seamless robotically poured-in-place gaskets
- Locking, latching or mounting hardware all outside of enclosure controlled volume
- Doors supplied standard with metallic pull type handle with slotted insert and complete latching mechanism. Provision for padlocking.
- One-person assembly

Inner Mounting Panel:

- Standard 11ga electrogalvanized panel – can be supplied standard painted white
- Adjustable in depth at increments of 25mm
- Panel surface flush with frame in standard rear most position
- Exclusive “wobble free” support devices
- Exclusive “slide and snap” features in accordance with one-person assembly philosophy

Accessories:

- Full line of external accessories and internal accessories for infinite configuration capabilities and applications
- All major external components are standard factory assembled – refer to icon
- Majority of Accessories are interchangeable between Mtrx and Streamline lines– refer to icon

NOTE: MIXING EXTERNAL COMPONENTS FROM THE MTRX 6500MX AND STREAMLINE 6100 SL SERIES WILL RENDER THE MTRX ENCLOSURE TO A NEMA 1 RATING

* Side covers are sold in individual packs or in pairs.

For all cabinet sizes, refer to table above for individual standard external components.

Refer to p.2 on how to order your modular solution by either pre-assembled kits or individual components.

Data subject to change without notice.

Single bay cabinet kit

The **6500 MXK cabinet kit** is used to protect equipment against oil, dust and light water splashing. The protection rating is achieved by the use of a high quality robotically poured-in-place gasket. The standard cabinet kits consist of:

- **6500 MX** frame (painted dark gray RAL7011; galvanized) (see p.18)
- **6500 MXT** top cover (painted dark gray RAL7011; steel) (see p.50)
- **6500 MXB** bottom cover (painted dark gray RAL7011; steel) (see p.61)
- **6500 MXR** rear cover (painted light gray RAL7035; steel) (see p.32)
- **6500 MXD** solid door (painted light gray RAL7035; steel) – Consisting of : a 4 points locking door; a tubular stiffening frame; and a zinc cast pull handle with slotted insert. (see p.22)
- **6500 MXM** inner mounting panel (no finish 11ga galvanized) (see p.39)
- 4 standard leveling feet (see p.148)
- 4 lifting eye bolts (see p.148)

**UL Listed / CSA Certified. CE (IEC60529)
NEMA/EEMAC 12-13 / IP55.**

**STEP 1: INSERT INTO
RECTANGULAR CUTOUT**

**STEP 2: ROTATE AND
SLIDE INTO CUTOUT**

**STEP 3: PUSH UNTIL
SPRING IS ENGAGED**

All modular frames are supplied with a hole pattern offset every 25mm to accommodate the installation of front inserted clip nuts (p.148) in all three axes. Refer to above steps for installation.

Data subject to

Double bay cabinet kit

The **6500 MXK cabinet kit** is used to protect equipment against oil, dust and light water splashing. The protection rating is achieved by the use of a high quality, robotically poured-in-place gasket. The standard cabinet kits consist of:

- **6500 MX** frame (painted dark gray RAL7011; galvanized) (see p.18)
- **6500 MXT** top cover (painted

dark gray RAL7011; steel) (see p.50)

- **6500 MXB** bottom cover (painted dark gray RAL7011; steel) (see p.61)
- **6500 MXR** rear cover (painted light gray RAL7035; steel) (see p.32)
- **6500 MXDD** overlapping solid doors (painted light gray RAL7035; steel) – consisting of : a 4 point locking door (right

side); a flange door (left side); and a standard zinc cast pull handle with slotted insert (see p.23)

- **6500 MXM** inner mounting panel (no finish 11ga galvanized) (see p.39)
- 4 standard leveling feet (p.149)
- 4 lifting eye bolts (see p.148)

NEMA/EEMAC 12-13
CSA Certified / UL Listed
CE (IEC60529 / IP55)

Note: 4 levelling feet and 4 lifting eye bolts are supplied uninstalled for each cabinet kit. These may be screwed into the M12 x 1.75 25mm long threaded anchoring holes located at each corner of the cabinet.

Data subject to change without notice.

Single bay disconnect cabinet kit

The **6500 MXU disconnect cabinet kit** is used to protect equipment against oil, dust and light water splashing. The protection rating is achieved by the use of a high quality, robotically poured-in-place gasket. The standard cabinet kits consist of:

- **6500 MX** frame (painted dark gray RAL7011; galvanized) (see p.18)
- **6500 MXT** top cover (painted dark gray RAL7011; steel) (see p.50)

- **6500 MXB** bottom cover (painted dark gray RAL7011; steel) (see p.61)
- **6500 MXR** rear cover (painted light gray RAL7035; steel) (see p.32)
- **6500 MXDU** solid disconnect door (painted light gray RAL7035; steel) – consisting of : a 4 point locking master door (std left side); a 200mm wide disconnect flange door (right side); a disconnect defeater kit prohibiting access to a live

enclosure; and a standard zinc cast pull handle with slotted insert (see p.28)

- **6500 MXM** inner mounting panel (no finish 11ga galvanized) (see p.39)
- 4 standard leveling feet (p.149)
- 4 lifting eye bolts (see p.148)

**NEMA/EEMAC 12-13
CSA Certified / UL Listed
CE (IEC60529 / IP55)**

Note: For left hand disconnect provisions refer to suffix "L" on facing page.

If the 6500 MXU disconnect cabinet is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
 - an operating handle 1494V-H1
 - a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
 - if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.
- (Will not accept 1494F disconnect switch, 1494V-R1, -R2 and -W2 operating handles)

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep

Ordering a Cutler Hammer Disconnect switch catalog C361

- an operating mechanism with the disconnect switch
 - an operating handle (C361-H2 or H4)
- ### Circuit breaker operators catalog C371
- a Cutler hammer or Westinghouse circuit breaker
 - an operating mechanism
 - an operating handle

Ordering a Square D Class 9422 Disconnect switch

- an operating mechanism with the disconnect switch class 9422
 - an operating mechanism handle class 9422 Type A-1
- ### Circuit breaker
- a Square D circuit breaker
 - an operating mechanism class 9422
 - an operating mechanism handle class 9422 Type A-1

Ordering a General Electric TDA Disconnect Switch

- a disconnect switch QMR or QMW
 - a fuse clip kit if required
 - a TDAI flange handle
 - an operating mechanism, variable depth
- ### Circuit breakers
- a circuit breaker
 - a TDAI flange handle
 - an operating handle 1494V-H11
 - an operating mechanism, vari-

able depth

Ordering an ABB Disconnect switch

- a switch flange operated fuse if required
 - a DSFHS-12 shaft
 - a DSFHN-HS12 handle
- ### Circuit breaker
- a circuit breaker
 - an operating mechanism
 - a FHS-12 shaft
 - a FHN-HS12 handle

Ordering an I-TE Max-Flex™ Disconnect switch

- a basic right hand switch
 - a fuse kit if required
 - a handle FHOHS flange mounted
 - an operator FHOSO6R
 - a cable FHOECO36
- ### Circuit breaker
- a circuit breaker
 - a set of pressure wire connectors
 - a handle FHOH flange mounted
 - an operating mechanism
 - a standard cable 36"

Ordering a Westinghouse

- a disconnect switch or circuit breaker type DS
- a yoke assembly and backplate
- a rod and brace assembly
- a pivot mechanism
- an operating handle

Disconnect switches and operating mechanisms are not furnished with the enclosures.

Data subject to change without notice.

Double bay disconnect cabinet kit

The **6500 MXU disconnect cabinet kit** is used to protect equipment against oil, dust and light water splashing. The protection rating is achieved by the use of a high quality, robotically poured-in-place gasket. The standard cabinet kits consist of:

- **6500 MX** frame (painted dark gray RAL7011; galvanized) (see p.18)
- **6500 MXT** top cover (painted dark gray RAL7011; steel) (see p.50)
- **6500 MXB** bottom cover (paint-

ed dark gray RAL7011; steel) (see p.61)

- **6500 MXR** rear cover (painted light gray RAL7035; steel) (see p.32)
- **6500 MXDU** solid disconnect door (painted light gray RAL7035; steel) – consisting of : a 4 point locking master door (std left side); a 200mm wide disconnect flange door (right side); a disconnect defeater kit prohibiting access to a live enclosure; and a standard zinc cast pull handle with slotted

insert (see p.28)

- **6500 MXM** inner mounting panel (no finish 11ga galvanized) (see p.39)
- 4 standard leveling feet (p.149)
- 4 lifting eye bolts (see p.148)

**NEMA/EEMAC 12-13
CSA Certified / UL Listed
CE (IEC60529 / IP55)**

Note: For left hand disconnect-provisions refer to suffix "L" on facing page.

If the 6500 MXU disconnect cabinet is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
- an operating handle 1494V-H1
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
- if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.

(Will not accept 1494F disconnect switch, 1494V-R1, -R2 and -W2 operating handles)

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if

the enclosure is 12" deep

Ordering a Cutler Hammer Disconnect switch catalog C361

- an operating mechanism with the disconnect switch
- an operating handle (C361-H2 or H4)

Circuit breaker operators catalog C371

- a Cutler hammer or Westinghouse circuit breaker
- an operating mechanism
- an operating handle

Ordering a Square D Class 9422 Disconnect switch

- an operating mechanism with the disconnect switch class 9422
- an operating mechanism handle class 9422 Type A-1

Circuit breaker

- a Square D circuit breaker
- an operating mechanism class 9422
- an operating mechanism handle class 9422 Type A-1

Ordering a General Electric TDA Disconnect Switch

- a disconnect switch QMR or QMW
- a fuse clip kit if required
- a TDAI flange handle
- an operating mechanism, variable depth

Circuit breakers

- a circuit breaker
- a TDAI flange handle
- an operating handle 1494V-H11
- an operating mechanism, variable

depth

Ordering an ABB Disconnect Switch

- a switch flange operated fuse if required
- a DSFHS-12 shaft
- a DSFHN-HS12 handle

Circuit breaker

- a circuit breaker
- an operating mechanism
- a FHS-12 shaft
- a FHN-HS12 handle

Ordering an I-T-E Max-Flex™ Disconnect switch

- a basic right hand switch
- a fuse kit if required
- a handle FHOHS flange mounted
- an operator FHOSO6R
- a cable FHOECO36

Circuit breaker

- a circuit breaker
- a set of pressure wire connectors
- a handle FHOH flange mounted
- an operating mechanism
- a standard cable 36"

Ordering a Westinghouse

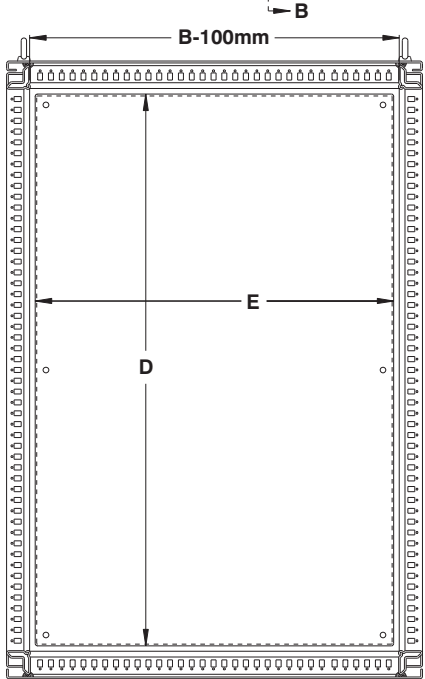

- a disconnect switch or circuit breaker type DS
- a yoke assembly and backplate
- a rod and brace assembly
- a pivot mechanism
- an operating handle

Disconnect switches and operating mechanisms are not furnished with the enclosures.

Single bay frame

The 6500 MX is the base frame of a Mtrx cabinet. The fully welded frame is made of powder coated **electrogalvanized steel and steel cast corners**. The tube-shaped roller formed design features an exclusive stiffening rib. This special stiffening rib consists

of three layers of material (4.5mm) all along the frame's inner edges. The frame design is fully symmetric. This facilitates installation and accessory selection. A hole pattern which can accommodate front inserted M8 clip nuts is present at 25 mm

increments. Self-tapping holes for M5 screws are provided. Inner panel sliding rails, eyebolts and leveling feet are also provided. The frame is RAL7011 sandtex dark gray.

STEP 1: INSERT INTO RECTANGULAR CUTOUT

STEP 2: ROTATE AND SLIDE INTO CUTOUT

STEP 3: PUSH UNTIL SPRING IS ENGAGED

All modular frames are supplied with a hole pattern offset every 25mm to accommodate the installation of front inserted clip nuts (p.148) in all three axes. Refer to steps for installation

FOR M5 SELF TAPPING HARDWARE (880 HDT10, SEE PAGE 482)

FOR M5, M6 OR M8 FRONT INSERTED CLIP NUTS (880 HDFM, SEE PAGE 483)

Double bay frame

The 6500 MX is the base frame of a Mtrx cabinet. The fully welded frame is made of powder coated **electrogalvanized steel and steel cast corners**. The tube-shaped roller formed design features an exclusive stiffening rib. This special stiffening rib consists

of three layers of material (4.5mm) all along the frame's inner edges. The frame design is fully symmetric. This facilitates installation and accessory selection. A hole pattern which can accommodate front inserted M8 clip nuts is present at 25 mm

increments. Self-tapping holes for M5 screws are provided. Inner panel sliding rails, eyebolts and leveling feet are also provided. The frame is RAL7011 sandtex dark gray.

STEP 1: INSERT INTO RECTANGULAR CUTOUT

STEP 2: ROTATE AND SLIDE INTO CUTOUT

STEP 3: PUSH UNTIL SPRING IS ENGAGED

All modular frames are supplied with a hole pattern offset every 25mm to accommodate the installation of front inserted clip nuts (p.148) in all three axes. Refer to above steps for installation

FOR M5 SELF TAPPING HARDWARE (880 HDT10, SEE PAGE 482)

FOR M5, M6 OR M8 FRONT INSERTED CLIP NUTS (880 HDFM..., SEE PAGE 483)

Window doors for double bay cabinet

The 6500 MXDDW overlapping window doors are installed on the front and/or back face of a Mtrx single bay cabinet. They are made of 14ga steel and lexan windows. All doors are supplied standard with: (i) a master door on the right and a flange door on the left;

(ii) a low profile metallic pull handle and a four point locking mechanism; (iii) top and bottom flange door locking handles; (iv) reinforcing tubular stiffening frames with provision for M5 self-tapping hardware; (v) all installation hardware, 120° hinging with captive

hinge pins; and (vi) durable, robotically poured-in-place gaskets.

Doors are reversible. Finish is powder coated RAL7035 textured light gray.

Double external doors for double bay cabinet

The 6500 MXDDE double external doors are installed on the front and/or back face of a Mtrx double bay cabinet. They are made of 14ga steel. These doors were developed for applications where the addition of a vertical mullion outweighs joining two

separate frames.

Door kits are supplied standard with: (i) low profile metallic pull handles and four point locking mechanisms; (ii) reinforcing tubular stiffening frames with provision for M5 self-tapping hardware; (iii) all installation hardware;

(iv) 120° hinges with captive hinge pins; (v) durable, robotically poured-in-place gasket; and (vi) a sealing vertical mullion to retain NEMA 12 rating.

Finish is powder coated RAL7035 textured light gray.

Door with access panel for single bay cabinet

The 6500 MXDP Access panel doors are installed on the front and/or back face of a Mtrx single bay cabinet. They are made of steel. These doors were developed for applications where access is required or limited to the lower portion of the enclosure. This approach enables the

handling of much smaller panels, should wiring or piping be routed via the front or rear of the enclosure. Door kits are supplied standard with: (i) a low profile metallic pull handle and four point locking mechanism; (ii) reinforcing tubular stiffening frames with provision for M5 self-tapping hard-

ware; (iii) four heavy duty hinges with captive hinge pins; (iv) a durable, robotically poured-in-place gasket; (v) horizontal mulion to retain NEMA 12 rating. Finish is powder coated RAL7035 textured light gray.

Single piece back cover

The 6500 MXR back covers are made to be installed on the back and/or front face of a Mtrx cabinet. The 6500 MXR consists of one back cover, ribbed mounting

brackets and installation hardware. A robotically poured-in place gasket ensures a complete and durable seal. The covers are finished with heat fused polyester

powder, electrostatically applied on a phosphatized base. Finish is RAL7035 textured light gray.

Double piece back cover

The 6500 MXR back covers are made to be installed on the back and/or front face of a double bay Mtrx cabinet. They are made of steel. The 6500 MXR consists of

two overlapping back covers, ribbed mounting brackets and installation hardware. A robotically poured-in place gasket ensures a complete and durable

seal. The covers are finished with heat fused polyester powder, electrostatically applied on a phosphatized base. Finish is RAL7035 textured light gray.

Rear cover with access panel for single bay cabinet

The 6500 MXRP Access panel rear covers are installed on the front and/or back face of a Mtrx single bay cabinet. They are made of steel. These covers were developed for applications where access is required or limited to the lower portion of the enclosure.

This approach enables the handling and possible modifications of much smaller panels should wiring or piping be routed via the front or rear of the enclosure. Rear cover kits are supplied standard with: (i) all installation hardware and flush mounting screws;

(ii) durable, robotically poured-in-place gaskets; (iii) horizontal lullion to retain NEMA 12 rating. Finish is powder coated RAL7035 textured light gray.

Solid side cover

The 6500 MXC side covers are made to be installed on the sides of a Mtrx cabinet. They are made of steel or stainless steel. The 6500 MXC consists of one side cover, and mounting hardware. **If side covers are required for**

both sides of the cabinet, two 6500 MXC must be ordered. A quality, robotically poured-in place gasket ensures a complete and durable seal. The covers are finished with heat fused polyester powder, electrostatically applied

on a phosphatized base. Finish is RAL7035 textured light gray.

Note: Side covers are not included with the cabinet kit (6500 MXK) and must be ordered separately.

Side door

The 6500 MXDS solid side doors are installed on the sides of a Mtrx cabinet. They are made of steel. The heavy-duty die cast hinges feature self-retaining hinge

pins which facilitate the removal of the door. The door is secured by quarter-turn locking mechanisms. A quality, robotically poured-in-place gasket ensures a

complete and durable seal. Finish is powder coated RAL7035 textured light gray.

Full mounting panel

The 6500 MXM mounting panel is installed inside a Mtrx cabinet. They are made of 11 GA of galvanized steel. The 6500 MXM consists of the mounting panel, mounting brackets and all installation hardware. Mounting channels are bolted to the bottom of the cabinet to support the inner panel

during its installation. This facilitates assembly and allows one or multiple panels to be installed at any depth. All inner panels are supplied standard with a pair of mid-section support brackets (two pairs for 1600mm and 1800mm wide panels). These brackets fasten directly to

the frame, for panels in their default full back position. For panels installed at other depths, optional grid railing is available to install the support brackets. Standard finish is unpainted 11 GA galvanized steel. Can be provided painted white.

Inner doors for double bay cabinet

The 6500 MXDM inner doors are installed inside a Mtrx double bay cabinet. They are made of steel. The door's frame is bolted to cabinet's frame, at any depth within the cabinet. Installation hardware

is provided. The doors are secured by quarter-turn locks. Key locks can be ordered separately. The doors are hinged on the left side. They are finished with heat fused polyester powder,

electrostatically applied on a phosphatized base. The finish is RAL7035 textured light gray.

Horizontal barrier panel

The 6500 MXBH horizontal barrier panel can be used as dividers in two possible configurations:

(i) within the top or bottom cabinet frame as a divider between a cabinet and either a cable entry top hat, a solid cable entry top or bot-

tom trough; (ii) or simply used as a horizontal barrier adjustable at increments of 25mm anywhere in height throughout the enclosure.

The barriers are non structural, They are designed to prohibit

access from one area to another. They are made of 16GA sheet metal. Supplied with installation hardware.

Finish is powder coated RAL7011 textured dark gray.

Solid hinged top

The 6500 MXTD solid top door is made to be installed on top of a Mtrx cabinet. They are made of steel.

The 6500 MXTD consists of a hinged solid top cover and instal-

lation hardware. The solid top door allows for easy access from the top of the cabinet by unlocking the 1/4 turn locks.

A quality, robotically poured-in-place gasket ensures a complete

and durable seal.

The tops are finished with heat fused polyester powder, electrostatically applied on a phosphatized base. Finish is RAL 7011 sandtex dark gray.

Cable entry top cover

The 6500 MXTC cable entry top cover is installed on the top of a Mtrx cabinet. It is made of steel. This cable entry top cover was developed for applications where cables are to be run into the

enclosure via its top without having to modify the enclosure. Cable top cover kits are supplied standard with: (i) all installation hardware and flush mounting screws; (ii) durable, robotically

poured-in-place gaskets; (iii) adjustable gland plates.

Standard finish is powder coated RAL7011 textured dark gray.

Please note:
NEMA rating will depend of gland plate configuration.
Standard as NEMA 12 when opening is entirely blocked.

Top cover fan tray (ultra low noise)

The 6500 MXFT ultra low noise top cover fan tray is installed on the top or bottom of a 600mm wide or more Mtrx cabinet. In order to install on top one must order the cable entry top cover (6500 MXTC) and replace two gland plates by the tray. For an installation on the bottom, 600mm wide cabinets only, sim-

ply remove and replace two gland plates. The tray is made of steel. Installed and serviced from the inside or outside of the enclosure. This fan tray was developed for applications where low noise and chimney active cooling is required. Fan tray kits are supplied standard with: (i) all installation hardware; (ii) four muffin fans

and wire harness; (iii) one IEC-320-C14 connector. Standard finish is powder coated RAL7011 textured dark gray.

Note: Only the AC top cover is factory assembled. The AC is supplied separately. For further details on air conditioners contact EXM customer service at 1-800-363-2423

Data subject to change without notice.

Please note:
For certain applications, grid railing can be ordered separately to mount to the cabinet frame for extra A/C support.

Vented top

The 6500 MXTV vented top is made to be installed on top of a Mtrx cabinet. It is made of steel. The 6500 MXTV consists of one vented top cover and installation hardware. There are ventilation perforations

on four sides. The tops are finished with heat fused polyester powder, electrostatically applied on a phosphatized base. Finish is RAL 7011 sandtex dark gray.

Note: (i) If required, lifting eye-bolts must be ordered separately. (ii) Due to the ventilation louvers, vented tops are not water, oil and dust tight. NEMA/EEMAC 1 / IP20

Solid base

The 6500 MXB solid base is made to be installed at the bottom of a Mtrx cabinet. It is made of steel. Solid bases are available with separate gland plates (standard) or one full gland plate. Installation hardware is included.

A quality, poured-in-place gasket ensures a complete and durable seal.

The bases are finished with heat fused polyester powder, electrostatically applied on a phosphatized base. Finish is RAL7011

sandtex dark gray.

Note: If required, plinths must be ordered separately.

Base plinth

The 6500 MXPLF base plinths are made to be installed under Mtrx cabinets. They are made of steel.

Plinths are ordered using two catalog numbers. (i) The 6500 MXPLF specifies the plinth's front and rear covers and is relative to the cabinet's width.

(ii) The 6500 MXPLF specifies the plinth's side covers and is relative to the cabinet's depth.

Mtrx plinths feature an exclusive ¼ turn lock system which was designed to facilitate the installation and removal of plinth covers. The plinths are finished with heat fused polyester powder, electro-

statically applied on a phosphatized base. Finish is RAL 7011 sandtex dark gray.

Plinths are not included with the 6500 MXK and 6500 MXU cabinet kits and must always be ordered separately.

Vented plinth

The 6500 MXPLVF vented plinths are made to be installed under Mtrx cabinets. They are made of steel.

Vented plinths are ordered using two catalog numbers.

(i) The 6500 MXPLVF specifies the plinth's front and rear covers and is relative to the cabinet's width.

(ii) The 6500 MXPLVF specifies the plinth's side covers and is relative to the cabinet's depth.

Mtrx plinths feature an exclusive ¼ turn plinth system which was designed to facilitate the installation and removal of plinth covers. The plinth's front and rear covers are vented.

The plinths are finished with heat fused polyester powder, electrostatically applied on a phosphatized base. Finish is RAL 7011 sandtex dark gray.

Plinths are not included with the 6500 MXK and 6500 MXU cabinet kits and must always be ordered separately.

Mobile base

The 6500 MXBM mobile bases are installed under Mtrx cabinets. They are made of steel. The 6500 MXBM consists of a base with four caster wheels and all required installation hardware. The heavy duty caster wheels

come with brakes. The bases are finished with heat fused polyester powder, electrostatically applied on a phosphatized base. The finish is RAL7011 sandtex dark gray.

In order to maintain the cabinet's integrity, the 6500 MXBM mobile base must be used in conjunction with a 6500 MXB solid base, which is ordered separately for 6500MX cabinets.

Transportation base

The 6500 MXBT transportation bases are installed under rows of Mtrx cabinets. They are made of steel.

The 6500 MXBT are used to facilitate the transportation of ganged cabinet.

The rugged 10 GA open bottom base is built with openings and tracks to facilitate the use of either fork lifts or lifting chains and rods.

The bases are finished with heat fused polyester powder, electrostatically applied on a phospho-

tized base. Finish is RAL7011 sandtex dark gray.

Watertight plinths

The **6500 MXPLW** watertight plinths are made to be installed under Mtrx cabinets. They are made of steel. The 6500 MXPLW is a seamlessly welded base and comes with all installation hardware.

A quality, robotically poured-in-place gasket ensures a complete and durable watertight seal. The plinths are finished with heat fused polyester powder, electrostatically applied on a phosphatized base.

Finish is RAL7011 sandtex dark gray.

Please note that watertight plinths cannot be stacked.

Solid top or bottom cable entry trough

The 6500 MXSCE solid top or bottom cable entry trough is installed on the top or base of a Mtrx cabinet. It is made of steel or stainless steel. This variable height symmetric trough was developed for applications where cables, bus bars or pipes are to

be run into the enclosure via the top or bottom without having to order either a separate top or bottom cover. The troughs are an extension of the controlled volume of the enclosure, retaining the NEMA 12 rating. Supplied standard with: (i) all installation

hardware; (ii) sealing plugs in eye bolt or leveling feet mounting holes. Standard finish is powder coated RAL7011 Sandtex dark gray

Note: End plates are sold separately. Refer to page 64

ORIENTATION SHOWN IS FOR TOP INSTALLATION. ROTATE 180° FOR BOTTOM INSTALLATION

OPENING CLEARANCE ON BOTH SIDES

Cable entry cabinets

The **6500 MXCE** cabinets are used to facilitate cable entry into the side of a modular cabinet system. They are made from steel and have an open top and bottom to provide cable access.

Optional closing plates are available to seal the top and bottom (see next page). A door is supplied with the cabinet to seal its open side. This door features a padlockable key

lock handle. Cable entry cabinets are finished with heat fused polyester powder, electrostatically applied on a phosphatized base. Finish is RAL 7035 textured gray.

SHOWN WITH SOLID COVERPLATE, SOLD SEPARATELY.

NEMA 12 -13 Mtrx PARTIAL COVERS & CONSOLES

Limitless Configurations of access panels, doors, consoles, and division barriers can be factory assembled using our value added services.

The modular front or rear accessories can be combined with any standard top, bottom or side covers of the Mtrx family of products. Partial covers or doors are offered standard in multiples of 200mm. When using this approach, key components are required to ensure the enclosure retains its

protection rating: (i) Horizontal mullions (one required per seam); (ii) Panel, door or console. Each component is supplied with its necessary installation hardware and gaskets. Protection rating, when assembled with standard Mtrx frame, top, bottom, rear and side covers, is NEMA 12 / IP55.

All parts are finished textured light gray RAL7035.

Note : Top and Bottom partial covers, doors, window doors or window covers, needs a suffix 'T' or 'B' to the catalog number. (i.e.: 6500 MXPC...T) or (i.e.: 6500 MXPC...B).

Data subject to change without notice.

Partial cover

The **6500 MXPC partial cover** is installed directly onto the frame of a Mtrx cabinet frame. All installation hardware and brackets are supplied with the kit. The NEMA 12 protection rating is retained when used in conjunction with horizontal mul-lions. Produced in 16ga or 14ga sheet metal. Finish is textured light gray RAL7035. **NEMA/EEMAC 12**

Partial window cover

The 6500 MXPCW partial window cover is installed directly onto the frame of either a Mtrx or Streamline cabinet frame. All installation hardware and brackets are supplied with the kit. The NEMA 12 protection rating is retained when used in conjunction with horizontal mullions. Produced in 16ga or 14ga sheet metal with a lexan window. Finish is textured light gray RAL7035. **NEMA/EEMAC 12**

† Add suffix 'T' for Top partial cover (i.e.: 6500 MXPCW1010T)

‡ Add suffix 'B' for Bottom partial cover (i.e.: 6500 MXPCW1010B)

Horizontal division barrier

The 6500 MXP HB horizontal barrier kits are barriers that restrict vertical access from one area to another within the enclosure, thus possibly creating modular volumes accessible via partial doors or partial covers. Knockouts are provided to run cables through from one compartment to another. Ventilation openings enable air to circulate. Each kit consists of one barrier panel and its mounting hardware.

Note: requires grid railing (see p.122) or vertical barrier 6500 MXPVB see below for installation.

Modular vertical division barrier

The 6500 MXPVB modular vertical barrier kit is supplied in multiples of 200mm. These stackable barriers restrict access vertically, between adjacent cabinets or cable troughs. Knockouts and various mounting features are provided throughout. Each kit consists of a pair of barriers and the necessary mounting hardware.

HOLES FOR M5 SELF TAPING H/W AND 10X10mm CUTOUTS FOR M6 CLIP NUTS SUPPLIED AT 25mm INTERVALS.

Light duty metric modular cabinets

The STREAMLINE series of cabinets are used to house and protect equipment where environmental considerations aren't as severe as NEMA 12 requirements, however where robustness, versatility and quality are still sought.

These cabinets are made of welded steel frames with incorporated top and bottom covers. Available in single bay standard configurations, the STREAMLINE cabinets can be ordered in complete application specific kits or can be fully customized by order-

ing individual parts. Many components and accessories are interchangeable between the NEMA 12 Mtrx and NEMA 1 STREAMLINE series. Look for the MX/SL logo. **MX/SL COMPATIBLE** Designed and made in North America.

Light duty metric modular cabinets

Frame:

- 10 bend closed profile roll-formed electrogalvanized posts
- Fully welded load bearing structure with steel cast lifting and support corners
- Frame includes welded sheet metal top and bottom covers with cable entry provisions
- 25mm DIN system hole pattern in height and depth
- M12 threaded hole for installation of lifting or supporting h/w directly into structural frame
- Standard polyester powder coated fine texture dark gray finish (RAL7011)
- Multi-bay / multi-door line-up capable

Doors, Sides and Rear Covers:

- 14ga or 16ga as per UL / CSA requirements
- Standard polyester powder coated textured light gray RAL7035 or black RAL9005 finish
- 4 point locking, latching or mounting hardware all outside of enclosure volume
- Doors supplied standard with metallic pull type handle with slotted insert and complete latching mechanism. Provision for padlocking
- One-person assembly

Inner Mounting Panel:

- Standard 12ga electrogalvanized panel – can be supplied painted white
- Adjustable in depth at increments of 25mm
- Panel surface flush with frame in standard rear most position
- Exclusive “wobble free” support devices
- Exclusive “slide n` snap” features in accordance with one-person assembly philosophy

Accessories:

- Full line of external accessories and internal accessories for infinite configuration capabilities and applications
- All major external components are standard factory assembled – refer to icon
- Accessories are interchangeable between Mtrx and Streamline lines

* Side covers are sold in individual packs or in pairs.

For all cabinet sizes, refer to table above for individual standard external components.

Refer to p.2 on how to order your modular solution by either pre-assembled kits or individual components.

Data subject to change without notice.

Single bay cabinet kit

The 6100 SLK cabinet kit is comparable to the Mtrx kit in form, fit and function however designed for NEMA 1 rated applications. The standard cabinet kits consists of:

- 6100 SL frame with incorporated top and bottom (painted dark gray RAL7011; galvanized) and accessory kit (cable entry caps; eye bolts; leveling feet) (p.94)
- 6100 SLR rear cover (painted light gray RAL7035; steel) (p.103)
- 6100 SLD solid door (painted light gray RAL7035; steel) - consisting of: a 4 point locking mechanism; vertical stiffeners; a zinc cast pull handle with slotted insert (p.98)
- 6100 SLM inner mounting panel (no finish 12ga galvanized) (p.107)
- 4 std leveling feet
- 4 lifting eye bolts

CSA Certified / UL Listed
NEMA/EEMAC 1 / IP30

STEP 1: INSERT INTO RECTANGULAR CUTOUT

STEP 2: ROTATE AND SLIDE INTO CUTOUT

STEP 3: PUSH UNTIL SPRING IS ENGAGED

All modular frames are supplied with a hole pattern offset every 25mm to accommodate the installation of front inserted clip nuts (p.156) in all three axes. Refer to above steps for installation

Frame for Streamline Cabinet

The 6100 SL Streamline frame is the base frame of the Streamline cabinet. The frame is a combination of the Mtrx roll formed tubular posts and welded sheet metal top and bottom.

The same hole pattern at 25mm increments is supplied in both the height and depth of the enclosure enabling the use of most Mtrx accessories. Inner panel sliding rails are incorporated in the frame

construction. Eye bolts, leveling feet, cable entry caps and gland plates are provided standard. The frame is finished sandtex dark gray RAL7011.

STEP 1 : INSERT INTO RECTANGULAR CUTOUT

STEP 2 : ROTATE AND SLIDE INTO CUTOUT

STEP 3 : PUSH UNTIL SPRING IS ENGAGED

For cabinet frame finished textured black RAL9005 add suffix "X"

6100 SL180606X – cabinet with four 3 inch capped openings in each corners with exterior covers painted textured black

Data subject to change without notice.

Frame for Streamline Cabinet with Top Gland Plates

The 6100 SL...CE Streamline frame is the base frame of the Streamline cabinet. The frame is a combination of the Mtrx roll formed tubular posts and welded sheet metal top and bottom.

The same hole pattern at 25mm increments is supplied in both the height and depth of the enclosure enabling the use of most Mtrx accessories. Inner panel sliding rails are Incorporated in the frame

construction. Eye bolts, leveling feet, cable entry caps and gland plates are provided standard. The frame is finished sandtex dark gray RAL7011.

STEP 1 : INSERT INTO RECTANGULAR CUTOUT

STEP 2 : ROTATE AND SLIDE INTO CUTOUT

STEP 3 : PUSH UNTIL SPRING IS ENGAGED

Full Mounting Panel for Streamline cabinet

The **6100 SLM Streamline installation panel** is installed inside a Streamline cabinet / frame. It is made of 12 GA galvanized steel. The panel kit consists of all the panel and all instal-

lation hardware. Similarly to the Mtrx line, the panel slides rotate and snap into position. Panel is supplied in its default full back position, however can be moved along depth by increments of

25mm. Standard finish is unpainted 12 GA galvanized steel, but can be provided painted white. **Note: The 6100 SLM cannot be installed in 6500 MX cabinets.**

6500 MXJO7	Joining brackets

Data subject to change without notice.

Light duty joining brackets

The 6500 MXJO5 light duty joining brackets are used to join Mtrx modular cabinets once they are being joined at their final on site location.

Note: These joining brackets are not to be used where line-ups are to be transported in one piece.

CATALOG NUMBER	DESCRIPTION
6500 MXJO5	Light duty joining brackets

External joining brackets

The 6500 MXJO6 external rapid joining brackets are an alternative in joining cabinets from the outside with minimal rework or from the inside with no added hardware.

Note: These joining brackets are not to be used where line-ups are to be transported in one piece.

CATALOG NUMBER	DESCRIPTION
6500 MXJO6	External / Internal rapid joining brackets

Joining gasket

The 6500 MXJO4 joining gasket kit is used in conjunction with a joining bracket kit (see p.110) to maintain the cabinets environmental integrity. One size fits all.

CATALOG NUMBER	DESCRIPTION
6500 MXJO4	Joining gasket

Joining panel

The 6500 MXMJ0X joining panel is installed between two adjacent mounting panels (6500 MXM) in order to provide one continuous and removable mounting surface within the full height and width of the line-up.

Note: Adjacent inner panels are required to be installed 25mm forward to accommodate.

Mtrx DATA CENTERS & SERVER ROOMS

Networking Enclosure solutions

Note : The Mtrx solutions for datacom offers flexibility in both NEMA 12 and NEMA 1 ratings according to the environment where it will be used.

The 6500 MXK cabinets are used in environments where a heavy duty enclosure is needed.

The 6100 SLK cabinets are specifically designed for use in data centers and server rooms.

Refer to page 129 for more details

Climate control solutions

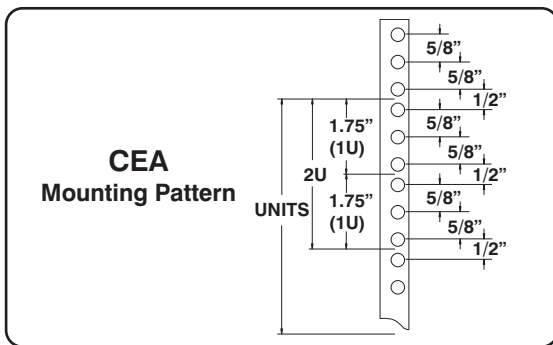

The 6100 SLK enclosures offer the limited possibility of passive cooling depending on the heat produced by the mounted equipment. The design of this network cabinet allows an airflow with a low level of consumption.

Custom dimensions are available in order to save space and energy required to cool the installed systems.

Refer to page 90 for more details

Rack Angles Construction

The configuration of accessories for networking and server racks is based upon a 19-inch rack design as defined in the CEA-310-E Standard. The standard unit used is 1,75".

The accessories available for the rack angles are designed for a 19", 23" and 24" wide use and are compatible with both Mtrx and Streamline solutions.

Some accessories are interchangeable between MX and SL solutions. Refer to the logo : **MX/SL**
COMPATIBLE

Remote access control

The E.line handles allow remote access control through the internet.

- It has an online system configuration and access log.
- Local master-slave interlock systems are available.
- Local access via a keypad with a digital LED screen.
- Simple stand-alone systems are also available.
- Sleek European design.

Data subject to change without notice.

Rack mounting

The 6500 MXL rack angles are used to provide mounting solutions for electronic equipment in Mtrx cabinets.

Four types of industry standard rack angles are available, namely 19", 24", 23" and metric rack angles.

The 6500 MXL rack angles are furnished in pairs. They are installed on the frame using the included installation brackets.

Holes for self tapping screws and holes for clip nuts are provided. Screws and nuts can be purchased separately (p.156).

The 19" and metric rack angles are made to be installed in 600mm wide cabinets. The 24" and 23" rack angles are made to be installed in 700mm wide cabinets. The angles can be installed in larger cabinets using width reducing brackets (p.142).

MX/SL
COMPATIBLE

Data subject to change without notice.

Mtrx 19" rack angles

The 6500 MXL rack angles are installed directly on the Mtrx cabinet frame using the included installation hardware.

19 inch rack angles are designed to be installed in 600mm wide cabinets and can be installed in larger cabinets using optional frame reducing brackets (see page 124). The 6500 MXL are sold in pairs and come with installation hardware. Finish is RAL7011 Dark Gray.

Lifting angles – Joins two adjacent cabinet lifting points in a line-up – Capacity (pair) 2000lbs (see note below)
Steel, zinc plated and mounting h/w

Note on Lifting and Supporting accessories

When lifting with Eye Bolts:

- (i) Make sure sling angles with top cover are no less than 45° - ideally should be 60° or more
 - (ii) If lifting at an angle always ensure eye bolts are oriented along the axis of the sling
- When lifting with Lifting Angles or Bar:
- (i) Vertical lifting at 90° with respect to top cover is recommended
 - (ii) Make sure shackles and spreader bar which comply with government regulations are used. Specified capacities are approximations and may vary due to specific applications. The acceptability of these systems for the eventual application is the sole responsibility of the customer. For large line-ups shipped assembled the use of our **transportation base / plinth (6500 MXBT p.66)** is recommended.

Data subject to change without notice.

Lifting bars

The **6500 MXLB** lifting bars are used to optimize weight distribution while lifting three to six ganged cabinets, with a maximum of 500lbs per bay. The bars mount on top of the cabinets. The kit includes two plated steel lifting bars and installation hardware.

Hinged access doors

The **886 HBK** hinged access doors are made from 16 or 14 GA steel, with studs welded to permit easy installation by piercing a cut out on the cabinet. These access doors have solid covers.

All mounting hardware and instructions are supplied. Frames are finished with RAL7035 textured light gray heat fused powder paint, electrostatically applied on a pretreated base.

Enclosure lights - Series 880 LED

The **880 LED** are designed to illuminate the interiors of small to large enclosures with the very low power consumption that the LED lights provide. The light bars are motion activated using the built-in motion sensor that eliminates the need for a door switch. The time the LED lights stay on, without

movement, is adjustable to 3, 5 or 10 minutes. The light bars are made from extruded aluminum and feature an integrated 120/240 Volts, 11.5 Amps USA/Canada standard receptacle, so that electrical devices (e.g. power tools) can be easily plugged in when needed. A 5 foot cord with a

USA/Canada 120/240 Volts plug is provided. The LED bars come complete with a set of 2 mounting brackets (880 LEDB) that are easily clipped along the length of the LED bar and can be fixed to the enclosure with the included M5 screws or optional right angle mounting bracket.

Mtrx SAFETY SOLUTIONS

Safety solutions for the Mtrx and Streamline series

Note: To reduce the risk for your employees and liability of your company from electrical incidents, EXM has developed safety solutions to considerably minimize exposure to potentially harmful situations.

Arc Flash Safety Solutions

These accessories reduce the exposure from potential Arc Flash or from Arc Blast resulting from an electrical system breakdown.

The External keyboard and Screen consoles enable the operator to interact with the electrical system without having to open the enclosure. This accessory allows a secure interface with a live system.

The 886 KBS and 886 KBF can be mounted on both 6500 MX and 6100 SL series.

Refer to page 121 for more detail

The Partial window cover, and hinged window kits allow the operator to witness the components installed inside the cabinets without having to open the enclosure. The lexan window arc resistance is established at 10sec*. The 6500 MXPCW, 6500 MXPDW and 886 HWK can be ordered in several standard sizes as well as custom sizes.

The external print pocket with lid allows the access to documentation from the exterior of the enclosure. The 886 PPEX is available with an optional locking system to secure documents.

Refer to page 120 and 150 for more details

Interior Safety Solutions

The Horizontal and Vertical division barriers are designed to restrict the access to areas inside the enclosure. The 6500 MXPHB and 6500 MXPVB were developed to prevent the entry of an adult hand in restricted areas.

Refer to page 83 for more details

Data subject to change without notice.

*Information given by the manufacturer, not intended for specification.

POWER DISTRIBUTION SOLUTIONS FOR LOW VOLTAGE APPLICATIONS

Improved productivity

- Multiple connections achieved at once
- Pre-calibrated snap-on devices eliminate having to drill busbars
- Down-time reduced for servicing or maintenance by swapping components

Improved versatility & flexibility

- Limitless configuration possibilities
- Reconfigurable, scalable & upgradeable

Improved safety & security

- Protection degree up to IP20
- Short circuit tested with better results than traditional wiring
- UL 508A listed and CSA certified components for feeder circuits up to 600V AC

Improved aesthetics

- Organized and clean look

Busbar for 60mm system (up to 2500A)

The **copper busbars** are required to distribute the power phases throughout the system: individual enclosures; or line-ups of ganged cabinets. The busbars are offered in either flat bar or T- sections for a complete range of current carrying capacities. Bars and sections are sold in standard length of 2400mm. Standard finish is Tin plated. **UR / CSA**

Note: Precut to specific lengths available upon request.

Catalog number	Description	Cross section (mm ²)	Current carrying capacities (A) at busbar temperature of *		Busbar support part number (to be ordered separately)	Measured short circuit strength Ieff (RMS) surge current (kA) at specific busbar support clearances (center to center) **		
			65°C	85°C		250mm	400mm	700mm
886 01618	Flat bar 12 x 5 mm	60	200A	250A	886 01508	18.75	18.75	-
886 01620	Flat bar 20 x 5 mm	100	320A	400A	886 01508	18.75	18.75	-
886 01622	Flat bar 30 x 5 mm	150	450A	550A	886 01508	25	22	-
886 01623	Flat bar 12 x 10 mm	120	360A	450A	886 01508	18.75	18.75	-
886 01624	Flat bar 20 x 10 mm	200	520A	630A	886 01508	18.75	18.75	-
886 01625	Flat bar 30 x 10 mm	300	630A	800A	886 01508	25	22	-
886 01609	Double T-section	500	-	1250A	886 01231	-	30	25
886 01608	Double T-section	720	-	1600A	886 01231	-	30	25
886 01187	Triple T-section	1140	-	2500A	886 01232	-	35	25

* Current capacities of flat bars with components fitted were calculated by testing at an ambient temperature of 35°C (IEC and UL).

* Current capacities of 'T' sections with components fitted were calculated by testing at an ambient temperature of 30°C (IEC and UL).

** Approximate short-circuit strength according to UL845 for 60mm busbar system with respect to clearances (mm) between busbar supports part numbers 886 01508; 886 01231; or 886 01232

Busbar temperatures are influenced by mounted components and by air circulation. An ambient temperature dependent correction factor (k₂) can be determined using the diagram opposite and example below. The busbar temperature will vary for changes in loading or ambient conditions.

Example: System using a 30 x 10mm busbar system

At 35°C the normal current carrying capacity is 630A (k₂ = 1.0)

If a continuous load of 800A is required, then **k₂ = 800/630 = 1.3**

Using the diagram, at factor k₂ and ambient 35°C the busbar temp. is now 85°C

Thus the components in contact with the bar must have a temperature resistance of at least 85°C

Data subject to change without notice.

POWER DISTRIBUTION SOLUTIONS

Brace terminal for 30x10 and section busbars

The **brace terminals** are devices used to connect flat and flexible copper busbars to the 60mm three phase busbar system without drilling holes or additional hardware. UL 508A, CSA.

Catalog number	Description	Terminal space W x H (mm)	For use up to max.	UL (UL508A)	CSA	QTY
886 01069	30x10 flat,	55 x 28	1600A/2000A*	✓	✓	3

886 01071	profiles	105 x 28	1600A/2000A*	✓	✓	3

Installation tip! Rule of thumb; the distance between conductor to conductor or conductor to ground is 1 inch through air or 2 inches along surface.

Disclaimer: Supplied for gross layout & sizing of system. It is the responsibility of the customer to ensure all applicable industry standards are verified and met.

Busbar joining connectors for 60mm systems

The **busbar joining connectors** are devices used to join two identically shaped busbars within large enclosures or line-ups without any drilling. The joining connectors enable systems to be optimized for installation and transportability. This approach compliments, where applicable, the use of flat bar or round cables and terminal clamps.

METRIC CABINETS & ENCLOSURES

Water, oil & dust tight terminal boxes, metric

The 6412 ESTB screw cover oil and dust tight enclosures are used indoors and outdoors to protect the enclosed controls from dust, dirt, oil and water splashing. The box and cover are made from code gauge steel with all seams continuously welded. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the box when the

door is open. A high quality, seamless gasket which is robotically poured-in-place, ensures a complete and durable water-tight seal. The enclosure can be mounted or externally mounted using optional wall mounting feet. These feet have oblong holes to facilitate installation. Mounting brackets are supplied on the bottom of the enclosure. Inner panels can be ordered separately,

(see page 190). Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is RAL7035 textured light gray.

**CSA Certified / UL Listed.

Water, oil & dust tight hinged windowed terminal boxes

The 6412 ESCHWTB are used indoors or outdoors to protect the enclosed controls from dust, dirt, oil and water splashing. The 6412 ESCHWTB are made of high quality code gauge steel, with corner seams continuously welded. The window is made of 1/4" lexan. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the box when the door is open. A high quality, robotically poured-in-

place, seamless gasket ensures a complete and durable water-tight seal. These enclosures feature die cast hinges, which are bound to the cover by an exclusive concealed hinge pin system. The covers are interchangeable and can be removed by unfastening the anti-vibration lock nuts. The enclosure can be internally or externally mounted using optional wall mounting feet. These feet have oblong holes to facilitate installation. Mounting brackets

are supplied on the bottom of the enclosure. Inner panels can be ordered separately (see page 190). Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is RAL7035 textured light gray.

Water, oil & dust tight enclosures, metric

The 6412 ES water, oil & dust tight enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or water coming from any direction or for protection against dust, dirt or oil splashing. The 6412 ES is made of high quality 14 GA or 16 GA steel, with corner seams continuously welded. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the box when the door is open. A high quality, seamless

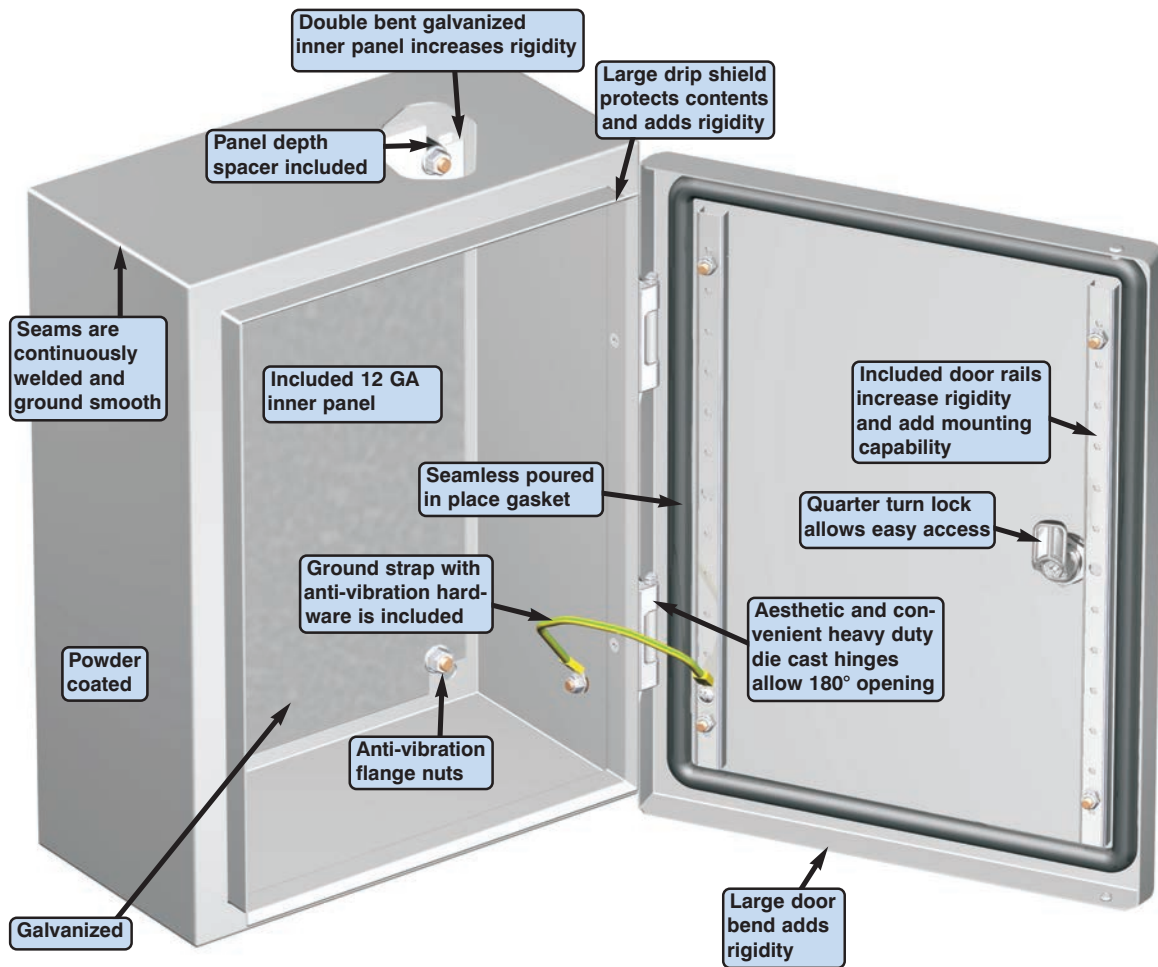

gasket, which is robotically poured-in-place, ensures a complete and durable water-tight seal. The captive pins of the concealed hinges can be pulled to remove the door.

A ¼ turn locking mechanism (or 3 point latch system on larger enclosures) ensures positive closing. Internal mounting holes are provided. Each enclosure comes **complete with a 12 GA galvanized inner panel**, which is double bent* for maximum rigidity and can be mounted on M8

welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is RAL7035 light gray. The inner panel is unpainted galvanized steel.

Oil & dust tight double door enclosure, metric

The 6500 ESDD oil and dust tight enclosures have a wall mounted double door, and are to be used indoors for protection against dirt, dust and oil. The box and cover are made of high quality 14 GA steel with all seams continuously welded. The opening has a curled lip around all sides and there is no center post. The left hand door is flanged, and the quarter turn locks are located on

the right hand door. Larger enclosures have a three point handle on the right hand door. The captive pins of the concealed hinges can be easily pulled to remove the door. Wall mounting feet are optionally available. **Each enclosure comes complete with a 12 GA galvanized inner panel,** which mounts on welded M8 studs. Enclosures are finished with heat fused powder paint,

electrostatically applied on a pre-treated base. The cabinet is RAL7035 textured light gray, the inner panel is unpainted galvanized steel (other colors available).

Oil & dust tight metric modular consoles, 400mm depth

The 6500 400mm depth series modular consoles are used to protect equipment against oil and dust. These cabinets are made of 14 GA or 16 GA steel. The opening has a curled lip around all sides to increase rigidity and ensures complete contact against the seamlessly poured, high quality gasket. Gas spring cylinders facilitate door operation. Three top sections can be mounted

over the 6500 MCO : the 6500 MWD, 6500 MTU and 6500 WD. The 6500 MWD is made to be installed under the 6500 MTU. They can also be **ordered as complete units which come factory assembled.**

The captive pins of the concealed hinges can be pulled to remove the door. External mount locking mechanisms ensure positive closing. The 6500 MCO and 6500

MTU come **complete with a 12 GA galvanized inner panel**, which is double bent for maximum rigidity and can be mounted on M8 welded studs.

The consoles are finished with heat fused powder paint, electrostatically applied on a pretreated base. Consoles are RAL7035 textured light gray. Inner panel is galvanized (other colors available).

Oil & dust tight metric monobloc consoles

The **6500 CO** series monobloc consoles are used to protect equipment against oil and dust. These cabinets are made of 14 GA steel. The opening has a curled lip around all sides to increase rigidity and ensures complete contact against the seamlessly poured, high quality gasket. Gas spring cylinders facilitate door operation. Dual access doors are provided. The

captive pins of the concealed hinges can be pulled to remove the door. External mount locking mechanisms ensure positive closing.

The 6500 CO comes **complete with a 12 GA galvanized inner panel**, which is double bent for maximum rigidity and mounts on M8 welded studs. The consoles are finished with heat fused powder paint, electrostatically applied

on a pretreated base. Sections are RAL7035 textured light gray. Inner panel is galvanized (other colors available).

NEMA 1 ENCLOSURES

Small utility enclosures

The 1100 are used where the control installation does not require a high degree of protection (such as watertight or dust tight), but where a quality enclosure is needed. Boxes and covers are made of high quality code gauge steel. The enclosures feature die cast hinges, which are bound to the cover by an exclusive concealed hinge pin system. The cover can be removed by unfastening the anti-vibration lock

nuts. Enclosures are closed with a ¼ turn lock that ensures tight positive closing against cushions. Four internal mounting holes are provided. Optional external mounting is available (885 ESCHMF).

Each enclosure comes complete with a 14 GA galvanized inner panel, which mounts on welded nuts.

Enclosures are finished with heat fused powder paint, electrostatically

applied on a pretreated base.

The box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

Medium utility enclosures

The 1100 are used where the control installation does not require a high degree of protection (such as watertight or dust tight), but where a quality enclosure is needed. Boxes and covers are made of high quality 16 GA or 14 GA steel. The enclosures feature die cast hinges, which are bound to the cover by an exclusive one piece concealed hinge. The cover can be removed by unfastening the anti-vibration lock

screws. Enclosures are closed with a ¼ turn lock that ensures tight positive closing against cushions. Four internal mounting holes are provided. Optional external mounting is available (885 ESMF).

Optional inner panels are available (881SP, 882SP or 881SP..P), which mount on M8 welded studs. Inner panels must be ordered separately.

Enclosures are finished with heat

fused powder paint, electrostatically applied on a pretreated base.

The box is ANSI/ASA 61 smooth gray.

Small Utility Enclosures

The 5100 ESCH are used where the control installation does not require a high degree of protection (such as watertight or dust tight) but where a quality enclosure is needed.

Boxes and covers are made of high quality 16 GA steel with continuously welded seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the box when the door is open. The enclosures feature die

cast hinges, which are bound to the cover by an exclusive concealed hinge pin system. The covers are interchangeable and can be removed by unfastening the anti-vibration lock nuts. EXM's exclusive flange-mounted ¼ turn locking system ensures positive closing.

Each enclosure comes complete with a 14 GA galvanized inner panel, which can be mounted on weld nuts. Four internal wall-mounting holes are provided.

Optional external mounting is available (885 ESCHMF).

Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

Large utility enclosures, corner formed

The 5100 ES are used where the control installation does not require a high degree of protection (such as watertight or dust tight), but where a quality enclosure is needed. The 5100 ES are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the box when the door is open. These

enclosures feature die cast hinges, which are bound to the cover by an exclusive one-piece concealed hinge. The cover can be removed by unfastening the anti-vibration lock screws. A 1/4 turn locking mechanism ensures positive closing. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel,** which is double bent* for maximum rigidity and can be mount-

ed on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

Double door utility enclosures

The 5100 ESDD are used where the control installation does not require a high degree of protection (such as watertight or dust tight), but where a quality enclosure is needed. The 5100 ESDD are made of high quality 14 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the box

when the door is open. The captive pins of the concealed hinges can be pulled out to remove the door. A ¼ turn locking mechanism ensures positive closing. Internal mounting holes are provided. Each enclosure comes complete with a 12 GA galvanized inner panel, which is double bent for maximum rigidity and mounts on M8 welded studs. Enclosures are finished with heat

fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

Modular construction enclosures

The 1100 CM are used where the control installation does not require a high degree of protection (such as watertight or dust tight), but where a quality enclosure is needed. Boxes and covers are made of high quality code gauge steel. The box consists of three parts : base, center and cover, which are assembled with self-tapping screws. **The base is offset to allow the direct mounting of instruments.** The enclo-

tures feature die cast hinges, which are bound to the cover by an exclusive concealed hinge pin system. The covers are interchangeable and can be removed by unfastening the anti-vibration lock nuts.

Enclosures are closed with a 1/4 turn lock that ensures tight positive door to box contact and can be interchanged with an optional key lock (880 SCQCOM-K). Four external mounting holes are pro-

vided. Enclosures are finished with ANSI/ASA 61 smooth gray heat fused powder paint, electrostatically applied on a pretreated base.

Type C & CKO Junction boxes

The 1100 C & CKO boxes are used as junction boxes, switch boxes, underground boxes or general service boxes.

Boxes and covers are made of high quality 16 GA or 14 GA steel. Four internal mounting holes are provided, except when dimensions D and E are not specified. A bonding screw and attachments are also provided. Type CKO

boxes have concentric knockouts on all four sides. Boxes smaller than dimension 303012 have a single door, which is secured with bracket hinges and a padlockable hatch. Larger boxes have double doors mounted on concealed hinges and are closed with EXM's 1/4 turn lock and a padlockable catch. Enclosures are finished with ANSI/ASA 61 smooth gray

heat fused powder paint, electrostatically applied on a pretreated base.

**CSA Certified / UL Listed *

Type E junction boxes

The 1100 E are used as surface mounting junction boxes, switch boxes or general service boxes. Boxes and covers are made of high quality 14 GA or 16 GA steel. Four internal mounting holes, and a bonding screw and attachments are provided. All four sides have concentric knockouts, except when noted. These boxes are

also available without knockouts (add suffix "N" to the catalog number).

These boxes feature formed steel hinges, a ¼ turn lock and a formed handle † to permit easy opening. The 1100 E is also available with a keylock option. Enclosures are finished with ANSI/ASA 61 smooth gray heat

fused powder paint, electrostatically applied on a pretreated base.

Type DF junction boxes

The 1100 DF are used as junction or pull boxes. These boxes are suitable for surface mounting with the standard screw cover or for flush mounting using either of the two optional covers (1100 HCF or 1100 FCD on page 212). Boxes and covers are made of high quality 16 GA or 14 GA steel. Four internal mounting holes, bonding

screws and attachments are provided. All four sides have concentric knockouts, except when noted.

These boxes are also available without knockouts (add suffix "N" to the catalog number).

Enclosures are finished with ANSI/ASA 61 smooth gray heat fused powder paint, electrostatically

applied on a pretreated base.

Padlockable screw cover junction boxes

The 1100 DFP boxes are used as junction or pull boxes, and are suitable for surface mounting. These enclosures are equipped with a padlockable system that prevents removing the screw cover without previously removing the padlock. The screw cover has a lip on two opposing sides to allow the insertion of the padlock provision.

Boxes and covers are made of

high quality 16 GA or 14 GA steel. Four internal mounting holes, bonding screws and attachment are provided. All four sides have concentric knockouts, except when noted. These boxes are also available without knockouts (add suffix 'N' to the catalog number).

Enclosures are finished with ANSI/ASA 61 smooth gray heat fused powder paint, electrostatically

applied on a pretreated base.

CSA Certified

UL Listed where noted *

Pull box extension rings / Open bottom pull box

The 1100 DER extension rings are installed over 1100 DF pull boxes to extend the depth of the enclosure. Stand-alone 1100 DER extension rings can also be used for applications which require a pull box with an open bottom. The extension rings are made of high quality 16 GA steel. Four internal mounting holes are

provided. Covers are not included with the 1100 DER. When they are used as extension rings, the covers from the 1100 DF boxes can be installed on the 1100 DER. When they are used as stand-alone, open bottom pull boxes, covers must be ordered separately. (see table)

Enclosures are finished with ANSI/ASA 61 smooth gray heat fused powder paint, electrostatically applied on a pretreated base (other colors available).

Telephone cabinets

The 1100 TC are specifically designed for telephone equipment. They are made of high quality 16 GA or 14 GA steel and three different covers can be attached to the main body. If the installation requires a hinged flush mounted enclosure, then one body (1100 TC) and one cover (1100 HCF or 1100 HCFW) must be ordered. For a hinged, surface-mounted enclosure, one

body (1100 TC) and one cover (1100 HCS or 1100 HCSW) must be ordered. If a screw cover is required, one body (1100 TC) and one screw cover (1100 FCD) must be ordered.

The hinged covers are provided with a screw-on hinge and are closed with a ¼ turn key lock, which ensures a positive door to box contact. Knockouts are provided and a wooden back is avail-

able upon request. Boxes and covers are finished with ANSI/ASA 61 smooth gray heat fused powder paint, electrostatically applied on a pretreated base.

Type-1 covers, blank or windowed

The 1100 covers are used in conjunction with the 1100 TC, 1100 DF*, 1100 DFN* or 1100 DER* bodies, where the control installation does not require a high degree of protection (such as watertight or dust tight), but where a quality enclosure is needed. Covers are made of high quality 16 or 14 GA steel. Covers are available for: hinge flush mounting (1100 HCF), hinge surface mounting (1100 HCS), windowed

hinge flush mounting (1100 HCFW), windowed hinge surface mounting (1100 HCSW), screw cover flush mounting (1100 FCD) and screw cover surface mounting (1100 SCD). The window is made with self-extinguishing polycarbonate. Hinged covers are provided with a screw-on hinge and are closed with a ¼ turn key lock, which ensures a positive door to box contact. Covers are finished with

ANSI/ASA 61 smooth gray heat fused powder paint, electrostatically applied on a pretreated base (other colors available).

Communications Box

The **1100 CB** are specifically designed for condominiums, apartments or buildings' communications wiring boxes. They can be used to house wiring, automation, networking, security, telephony or television antennas, and cable or satellite installations.

The boxes are made of high quality 18 GA galvanized steel, and have two cross stiffeners for greater rigidity. Four internal mounting holes are provided. Other types of optional covers are available (see pages 160-161) Boxes are unpainted and galva-

nized, covers are finished with white heat fused powder paint, electrostatically applied on a pre-treated base.

Refer to p.796 to validate choice of substrate for the application

Troughs

The 1100 T troughs are designed for ordinary locations. They are made of high quality 14 GA or 16 GA steel. They have mounting holes in the back, knockouts, bracket hinges and a provision for

padlocking. Troughs are finished with ANSI/ASA 61 smooth gray heat fused powder paint, electrostatically applied on a pretreated base (other colors available).

Type WE hinged wiring troughs

The 1100 WE are used as junction or pull boxes, and are suitable for surface mounting, where a hinged cover is required. Boxes and covers are made of high quality 14 GA or 16 GA steel. Four internal mounting holes, a bonding screw and attachments are provided. All four sides have concentric knockouts. These boxes

are also available without knockouts (add suffix "N" to the catalog number). These troughs feature formed steel hinges and a 1/4 turn lock. An optional key lock is available (880 SCQCOM-K).

Enclosures are finished with ANSI/ASA 61 smooth gray heat fused powder paint, electrostatically

applied on a pretreated base (other colors available).

Instrument Ventilated Enclosures

The **1100 IB** are used for general purpose housing of electrical or electronic instruments. These enclosures are made of high quality 18 GA steel. Covers with ventilation on the sides attach to the boxes with screws positioned to prevent the front and back from pushing inside the enclosure. The top of the cover has knockouts for an optional handle (page 460).

The cover protrudes from the box, slanted on the front and straight on the back. This acts as a gripping place for manipulation, and basic protection for the instruments mounted to the outside of the enclosure's front and back. Four internal mounting holes with clip-on polymeric feet are included. Enclosures are finished with heat fused powder paint, electrostatically

applied on a pretreated base.

Boxes are RAL7035 textured light gray. Covers are RAL7011 sand-tex dark gray.

Ventilated enclosures

The 1100 VE ventilated enclosures are used for general purposes whenever the contents require ventilation. The enclosures are made of high quality 18 GA steel. There are knockouts at the top and bottom, and all three sides are fully ventilated. Enclosures are also available

non-ventilated (add suffix "N" to catalog number).

Mounting holes are provided in the back and the covers are fixed with screws.

Enclosures are finished with ANSI/ASA 61 smooth gray heat fused powder paint, electrostatically applied on a pretreated base

(other colors available).

Type WDAL Aluminum Wiring Troughs

The 1100 WDAL are used as junction or pull boxes, and are suitable for surface mounting with a screw cover. Boxes and covers are made of high quality 12 GA aluminium. Four internal mount-

ing holes, bonding screw and attachments are provided. Troughs are available with or without knockouts (add suffix "N" to the catalog number if knockouts are not required). Boxes and cov-

ers have a natural aluminum finish.

ELECTRICAL DISTRIBUTION

Splitter Boxes & Troughs EEMAC/NEMA 1

The 1100 B splitter boxes are designed for 600 V (max.) service of 3 to 4 wires, in ordinary locations. They are made of high quality 14 GA or 16 GA steel. They have mounting holes in the back, knockouts, bracket hinges and a provision for padlocking.

The phenolic insulated splitter blocks are factory installed. The 225, 400 and 600 lugs have removable tops, which allows wires to be put into place easily. Enclosures are finished with ANSI/ASA 61 smooth gray heat fused powder paint, electrostatically

applied on a pretreated base. Inner panel is galvanized (other colors available).

Splitter Boxes & Troughs EEMAC/NEMA 3R/4/12

The 1412 B & T splitter boxes and troughs are designed for 600 V (max.) service of 3 to 4 wires, in ordinary locations. There is a curled lip around all sides to increase rigidity and prevent water from entering the enclosure when it is open. This also increases rigidity. They are made of high quality 14

GA or 16 GA steel. They have four mounting holes and a screw cover. There are no knockouts. The phenolic insulated splitter blocks are factory installed on an interior panel, which is mounted on welded studs. Optional mounting feet are available (885 CHMF). Enclosures are finished with heat fused powder paint,

electrostatically applied on a pre-treated base. Box is ANSI/ASA 61 smooth gray Inner panel is galvanized (other colors available).

Bus bar splitter troughs with aluminum bus bars

The 1100 BT bus bar splitter troughs are used indoors to house bus bars for power distribution. Troughs and covers are made of high quality 14 GA steel. Four external mounting holes are provided for easy fixation. Troughs are available in configurations of 3, 4 or 5 aluminum, tin

plated bus bars, which mount on slanted insulators. There are no knockouts. Bus bars are also available drilled and tapped 1/4 - 20 at 6" intervals, just add suffix 'DT' to the catalog number (ie. 1100BT...DT). Troughs are finished with heat fused powder paint, electrostatically applied on

a pretreated base. Box is ANSI/ASA 61 smooth gray.

Note: Lugs must be ordered separately.

Bus bar also available drilled and tapped 1/4 - 20 at 6" interval, add suffix 'DT' to the catalog number (ie. 1100 BT...DT)

Note :
EXM lugs must be ordered separately.
See pages 238-239 for different types of lugs.

Data subject to change without notice.

Bus bar splitter troughs with copper bus bars

The 1100 BTCU bus bar splitter troughs are used indoors to house bus bars for power distribution. Troughs and covers are made of high quality 14 GA steel. Four external mounting holes are provided for easy fixation.

Troughs are available in configurations of 3, 4 or 5 copper bus bars, which mount on slanted

insulators. There are no knock-outs. Bus bars are also available drilled and tapped 1/4 - 20 at 6" intervals, just add suffix 'DT' to the catalog number. (ie. 1100BTCU...DT).

Troughs are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61

smooth gray.

Note: Lugs must be ordered separately.

**CSA Certified
NEMA/EEMAC 1 / IP30**

Refer to p.796 to validate choice of substrate for the application

Bus bar also available drilled and tapped 1/4 - 20 at 6" interval, add suffix 'DT' to the catalog number (ie. 1100 BTCU...DT)

Note :
EXM lugs must be ordered separately.
See pages 238-239 for different types of lugs.

Data subject to change without notice.

Watertight bus bar splitter troughs

The 1412 BT bus bar splitter troughs are used indoors or outdoors to house bus bars for power distribution. Troughs and covers are made of high quality 14 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open.

A high quality, robotically poured-in-place gasket ensures a complete and durable water tight seal.

The captive pins of the concealed hinges can be pulled to remove the door. Quarter turn mechanisms ensure positive closing. Troughs are available in configurations of 3, 4 or 5 aluminum, tin plated bus bars, which mount on slanted insulators that are installed on an inner panel. Lugs must be ordered separately.

Bus bars are also available drilled and tapped 1/4 - 20 at 6" intervals, just add suffix 'DT' to the catalog

number (ie. 1400BT...DT).

There are no knockouts. Troughs are finished with heat fused powder paint, electrostatically applied on a pretreated base. The box is gray. Inner panel is galvanized (other colors available).

CSA Certified
NEMA/EEMAC 3-4-12 / IP66

Refer to p.796 to validate choice of substrate for the application

Bus bar also available drilled and tapped 1/4 - 20 at 6" interval, add suffix 'DT' to the catalog number (ie. 1412 BT...DT)

Note :

EXM lugs must be ordered separately.
See pages 238-239 for different types of lugs.

Data subject to change without notice.

Watertight bus bar splitter troughs with copper bus bars

The 1412 BTCU bus bar splitter troughs are used indoors or outdoors to house bus bars for power distribution. Troughs and covers are made of high quality 14 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open.

A high quality, robotically poured-in-place gasket ensures a com-

plete and durable water tight seal. The captive pins of the concealed hinges can be pulled to remove the door. Quarter turn mechanisms ensure positive closing. Troughs are available in configurations of 3, 4 or 5 copper bus bars, which mount on slanted insulators that are installed on an inner panel. Lugs must be ordered separately.

Bus bars are also available drilled and tapped 1/4 - 20 at 6" intervals, just add suffix 'DT' to the cat-

alog number (ie. 1412 BTCU...DT).

There are no knockouts. Troughs are finished with heat fused powder paint, electrostatically applied on a pretreated base. The box is gray. Inner panel is galvanized (other colors available).

CSA Certified
NEMA/EEMAC 3-4-12 / IP66

Refer to p.796 to validate choice of substrate for the application

Bus bar also available drilled and tapped 1/4 - 20 at 6" interval, add suffix 'DT' to the catalog number (ie. 1412 BTCU...DT)

Note :

EXM lugs must be ordered separately.
See pages 238-239 for different types of lugs.

Data subject to change without notice.

Stainless steel bus bar splitter troughs

The 1412 BTSS bus bar splitter troughs are used indoors or outdoors to house bus bars for power distribution. Troughs and covers are made of high quality 14 GA stainless steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. A high quality,

robotically poured-in-place gasket ensures a complete and durable water tight seal. The captive pins of the concealed hinges can be pulled to remove the door. Quarter turn mechanisms ensure positive closing. Troughs are available in configurations of 3, 4 or 5 aluminum, tin plated bus bars, which mount on slanted insulators that are installed on an inner panel. Lugs must be

ordered separately. There are no knockouts. Bus bars are also available drilled and tapped 1/4 - 20 at 6" intervals, just add suffix 'DT' to the catalog number (ie. 1412 BTSS...DT).

Troughs are unpainted and brushed smooth. Inner panel is galvanized (other colors available).

CSA Certified
NEMA/EEMAC 4X / IP66

SS bus bar splitter troughs with copper bus bars

The 1412 BTSSCU bus bar splitter troughs are used indoors or outdoors to house bus bars for power distribution. Troughs and covers are made of high quality 14 GA stainless steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. A high quality,

robotically poured-in-place gasket ensures a complete and durable water tight seal. The captive pins of the concealed hinges can be pulled to remove the door. Quarter turn mechanisms ensure positive closing. Troughs are available in configurations of 3, 4 or 5 copper bus bars, which mount on slanted insulators that are installed on an inner panel. Lugs must be ordered separately.

There are no knockouts. Bus bars are also available drilled and tapped 1/4 - 20 at 6" intervals, just add suffix 'DT' to the catalog number (ie. 1412 BTSSCU...DT). Troughs are unpainted and brushed smooth. Inner panel is galvanized (other colors available).

CSA Certified
NEMA/EEMAC 4X / IP66

Metering cabinet

The **1100 MC** metering cabinets are designed to house metering transformers or junction boxes. They are made of high quality 16 GA or 14 GA steel. Doors are hinged with a quarter turn lock and feature a padlock provision. There is an opening on top of the cabinet for meter connection.

Metering cabinets come complete with removable inner panel mounted on studs. Fixation is done by holes in the back of the cabinet.

Cabinets are finished with heat fused powder paint, electrostatically applied on a pretreated base. The box and panel are

ANSI/ASA 61 smooth gray.

Metering cabinet for Hydro-Québec specifications

The **1100 MCHQ** metering cabinets were designed by EXM for Hydro-Québec to house metering instruments. They are made of high quality 16 GA or 14 GA steel. Three types of mounting panels are installed in each cabinet. These removable panels are made of powder coated steel. The panels are pre-punched to accommodate the metering instruments used by Hydro-

Québec. The larger cabinets have provisions to accommodate extra inner panels (purchased separately). A grounding splitter block is installed on the cabinet's left side. All 1100 MCHQ cabinets have double doors which are secured by a quarter-turn mechanisms and tamper-resistant hinges. There are two openings on top for meter connection. Cabinets are finished with heat

fused powder paint, electrostatically applied on a pretreated base. Box and the panel are ANSI/ASA 61 smooth gray.

Current transformer cabinet

The 5300 CT current transformer cabinets are used indoors or outdoors to protect against rain, sleet and snow. The connections are for 400, up to 1200 Amperes 3 phase electrical service. Terminal blocks are supplied for each phase and for the neutral. The hardware to mount the current transformer (bar-style) is included. The 5300 CT484812 comes complete with a provision for a voltage transformer. The 5300 CT

are made of high quality 14 GA steel. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the doors are open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable weather tight seal. The captive pins of the concealed hinges can be pulled to remove the doors. The doors are closed with a 3 point padlock-

able handle. Internal mounting holes are provided.

Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box ANSI/ASA 61 smooth gray.

Small single door weatherproof enclosures

The 5300 ESCH are used in outdoor installations or indoors where dripping water is a problem. The 5300 ESCH are made of high quality 16 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal.

The enclosures feature die cast hinges, which are bound to the cover by an exclusive concealed hinge pin system. The covers are interchangeable and can be removed by unfastening the anti-vibration lock nuts. The doors are secured with padlockable draw pull catches. Each enclosure comes complete with a 14 GA galvanized inner panel, which mounts on M6 weld nuts. Four external mounting holes are provided. Enclosures are finished

with heat fused powder paint, electrostatically applied on a pre-treated base. Box is ANSI/ASA 61 smooth gray, inner panel is galvanized (other colors available).

Large weatherproof enclosures

The 5300 ESG large single door weatherproof enclosures are used as junction boxes or control boxes in outdoor installations or indoors where dripping water is a problem. These enclosures are designed to protect equipment against rain, sleet and snow. The 5300 ESG are made from quality 14 GA or 16 GA galvanized steel. The opening has a curled lip around all sides to prevent dripping water from entering the enclosure when the door is open, it also increases rigidity. A high

quality robotically poured-in-place seamless gasket ensures a weathertight seal. The enclosures feature die cast hinges, which are bound to the cover by an exclusive one piece concealed hinge. A 1/4 turn locking mechanism ensures positive closing. Internal mounting holes are provided (optional external wall mounting feet are available). Optional 12 GA galvanized inner panel which is double bent* for maximum rigidity which mounts on M8 welded studs. Enclosures are fin-

ished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray and inner panel is galvanized (other colors available).

Large weatherproof sloped top enclosures

The 5300 EST large single door weatherproof enclosures are used as junction boxes or control boxes in outdoor installations or indoors where dripping water is a problem. The 5300 EST are made from quality 14 GA or 16 GA steel. The integrated dripshield allows water to easily flow off of both ends of the enclosure, thus limiting the intrusion of water. The opening has a curled lip around all sides to prevent dripping water

from entering the enclosure when the door is open, it also increases rigidity. A high quality robotically poured-in-place seamless gasket ensures a weathertight seal. The pins of the concealed hinges can be pulled out to remove the door. A 1/4 turn locking mechanism ensures positive closing. Each enclosure comes **complete with a 12 GA galvanized inner panel** which is double bent* for maximum rigidity and which mounts

on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray.

Double door weatherproof enclosures

The 5300 ESDD large, double door, weatherproof enclosures are used as junction boxes or control boxes in outdoor installations, or indoors where dripping water is a problem. These enclosures are designed to protect equipment against rain, sleet and snow. The 5300 ESDD are made of high quality 14 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping

water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable weather-tight seal. The captive pins of the concealed hinges can be pulled to remove the door.

The handle on the left door is closed with a 3 point padlockable handle. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel, which is**

double bent for maximum rigidity and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray.

**CSA Certified / UL Listed

Weatherproof metering cabinet

The 5300 MC & MCDD weatherproof metering cabinets are specially designed for outdoor installation of metering transformers to protect against rain, sleet and snow. The 5300 MC/MCDD are made of high quality 14 GA & 16 GA galvanized steel, with tack welded corner seems. The integrated dripshield allows water to easily flow off of both ends of the enclosure, thus limiting the intrusion of water. The opening has a curled lip around all sides to increase rigidity and prevent drip-

ping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable weathertight seal. The captive stainless steel pins of the concealed hinges can be pulled to remove the door. The doors are closed with a 3 point padlockable handle. Internal mounting holes are provided. **Each enclosure comes complete with a galvanized inner panel**, which mounts on welded M8 studs. Enclosures

30" and wider have double doors, whereas smaller enclosures have single doors. Enclosures are finished with heat fused exterior powder polyester paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray,

Oil & dust tight free standing single door enclosure

The 9500 oil & dust tight enclosures are used indoors for protection against dust, dirt or oil splashing. The 9500 are made of high quality code gauge steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable oil & dust

tight seal. The captive pins of the concealed hinges can be pulled to remove the door. A stainless steel padlockable handle ensures smooth, secure 3-point latching. Optional back panels can be mounted at any depth, using the three sets of rails welded on the sides of the cabinet. Side panels are optional and may be ordered separately. A print pocket is provided. Double door enclosures have stiffeners on the back. Enclosures are finished with heat

fused powder paint, electrostatically applied on a pretreated base. The box is ANSI/ASA 61 gray. Inner panel is galvanized (other colors available).

Oil & dust tight multi-door enclosures

The 5500 MD multi-door, oil and dust tight enclosures are used indoors for protection against dirt, dust and oil. The boxes are made of high quality code gauge steel, with all seams continuously welded. Body stiffeners are provided to increase rigidity. Sets of double doors and single doors are separated by center posts.

The double doors do not have a center post, but the left hand door is flanged and the oil tight stainless steel padlockable handle is on the right hand door. The single doors also have padlockable handles and the hinges are on the left.

A high quality, robotically poured-in-place gasket ensures a complete and durable oil and dust

tight seal. The heavy duty die cast hinges have captive hinge pins which permit 180° door opening.

The three door enclosures have one set of double doors with a 78"X70" inner panel and one single door with a 78"X34" inner panel. The four door enclosures have two sets of double doors with two 78"X70" inner panels. The 5 door enclosures have two sets of double doors with two 78"X70" inner panels and one single door with a 78"X34" inner panel. An interlock is installed to ensure that the left hand doors (slaves) can only be opened if the right hand door (master) is open. The inner panels are made of painted white steel and mount on

M10 welded studs. Lifting eye-bolts and provisions for mounting lights are provided. The mechanical interlock mechanism uses the right hand door as the master and allows users to close the doors in any order. A print pocket is also provided.

Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray.

NEMA 4-12 ENCLOSURES

JIC enclosures - Light duty

The 5412 CH are used indoors or outdoors to protect the enclosed controls from dust, dirt, oil and water splashing. The 5412 CH are made of high quality code gauge steel, with continuously welded corner seams. The enclosures feature die cast hinges, which are bound to the cover by an exclusive concealed hinge pin system. The covers are interchangeable and can be removed by unfastening the nylon lock

nuts. Enclosures are closed with a 1/4 turn lock, which ensures tight, positive closing. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal.

Each enclosure comes complete with a 14 GA galvanized inner panel, which mounts on welded nuts. The enclosure can be internally or externally mounted using the included mounting

feet. These feet have oblong holes to facilitate installation. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box ANSI/ASA 61 smooth gray.

JIC enclosures

The 5412 ESCH are used indoors or outdoors to protect the enclosed controls from dust, dirt, oil and water splashing. The 5412 ESCH are made of high quality 16 GA steel, with continuously welded corner seams.

The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal.

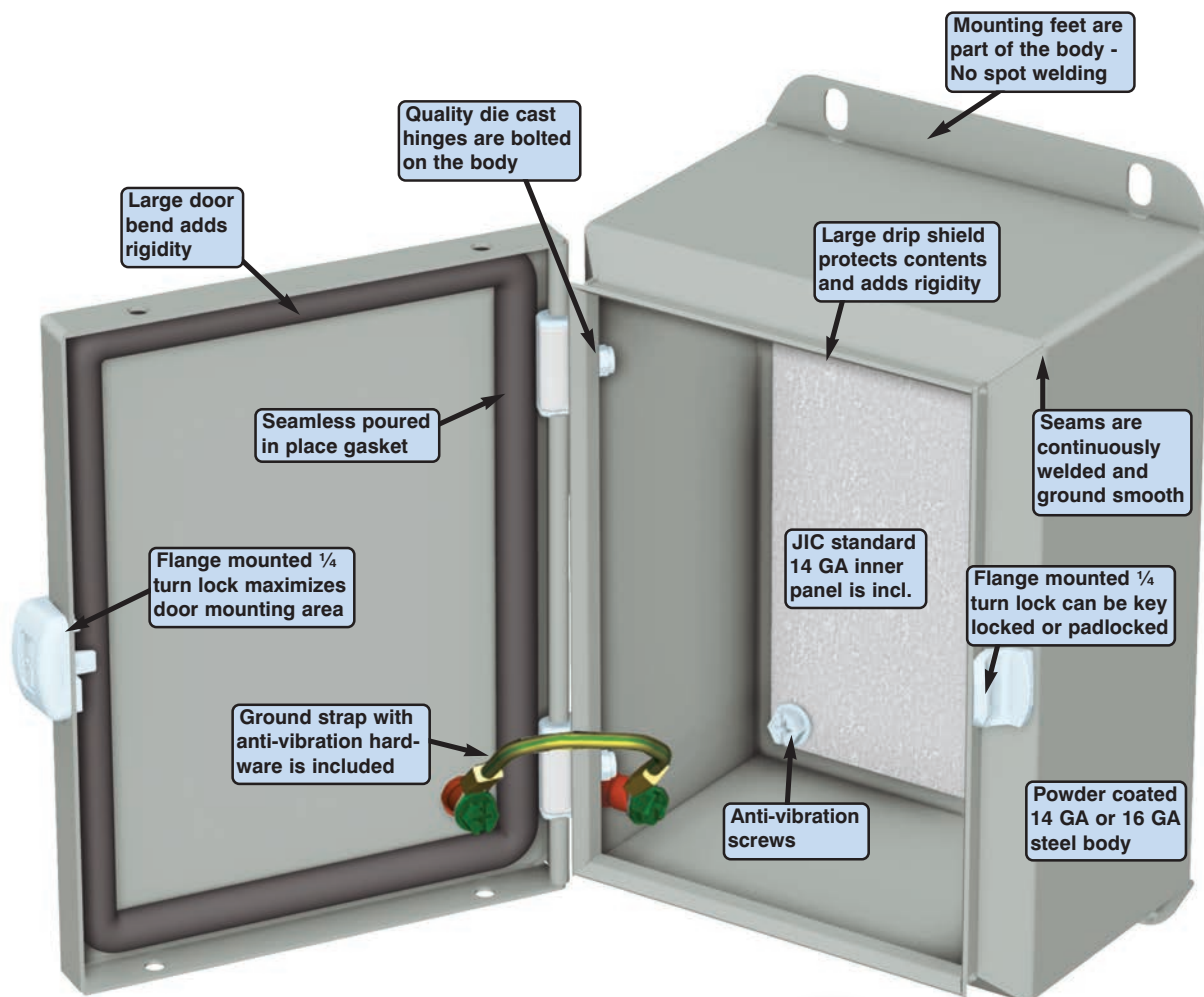

The enclosures feature die cast hinges, which are bound to the cover by an exclusive concealed hinge pin system. The covers are interchangeable and can be removed by unfastening the anti-vibration lock nuts.

EXM's exclusive flange-mounted ¼ turn locking system ensures positive closing while leaving a full workable mounting surface on the door. **Each enclosure comes complete with a 14 GA galvanized inner panel**, which mounts on welded nuts. The four external wall-

mounting holes are oblong to facilitate installation and the mounting feet are incorporated into the body of the enclosure. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray.

JIC enclosures (light gray, screw-on feet)

The 5412 ESCHB are used indoors or outdoors to protect the enclosed controls from dust, dirt, oil and water splashing. The 5412 ESCHB are made of high quality 16 GA steel, with continuously welded corner seams.

The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal.

The enclosures feature die cast hinges, which are bound to the cover by an exclusive concealed hinge pin system. The covers are interchangeable and can be removed by unfastening the anti-vibration lock nuts.

EXM's exclusive flange-mounted ¼ turn locking system ensures positive closing while leaving a full workable mounting surface on the door. **Each enclosure comes complete with a 14 GA galvanized inner panel**, which mounts on welded nuts.

The enclosure can be internally or externally mounted using the included wall mounting feet. These feet have oblong holes to facilitate installation. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is RAL7035 smooth gray.

Hinged cover wiring troughs (screw-on feet)

The 1412 CH...IP hinged cover oil and dust tight troughs with inner panel are used indoors to protect the enclosed controls from dust, dirt, oil and water splashing. The box and cover are made of high quality 16 GA steel, with all seams continuously welded. The opening has a flange around all sides to increase rigid-

ity and ensure complete contact with the poured in place gasket. The door is secured by convenient 1/4 turn locks and can be opened over 180°. Internal mounting holes are provided and a wall mounting kit is supplied. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated

base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized.

Water, oil & dust tight enclosures

The 5412 ES water, oil & dust tight enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ES are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the

door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The pins of the concealed hinges can be pulled out to remove the door.

A ¼ turn locking mechanism (or 3 point latch system on larger enclosures) ensures positive closing. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel,** which is

double bent* for maximum rigidity and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pre-treated base. Box is ANSI/ASA 61 smooth gray.

Water, oil & dust tight enclosures (welded mounting feet)

The 5412 ESEL water, oil & dust tight enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESEL are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. A high

quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. A full length piano hinge with stainless steel pin permits 180 degrees opening. The hinge pin can be pulled out to remove the door. The externally mounted 1/4 turn locks, on 3 sides of the enclosure, permit positive closing and a larger surface area for instrument mounting.

Each enclosure comes complete with a 12 GA galvanized inner panel, which is double

bent* for maximum rigidity and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray.

Water, oil & dust tight enclosures

The 5412 ESDA water, oil & dust tight enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESDA are made of high quality 14 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the

door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The captive pins of the concealed hinges can be pulled to remove the door.

A 3 point handle latch system ensures positive closing of the front door. The rear door closes with 1/4 turn locking mechanisms.

Each enclosure comes complete with a 12 GA galvanized inner panel,

bent* for maximum rigidity and can be mounted on adjustable, multiple depth locations. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray.

Water, oil & dust tight windowed enclosures

The 5412 ESW water, oil & dust tight enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESW are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. The window is made with self-extinguishing polycarbonate. The opening has a curled lip around all sides to increase rigidity and

prevent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The pins of the concealed hinges can be pulled out to remove the door.

A 1/4 turn locking mechanism ensures positive closing. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized**

inner panel, which is double bent* for maximum rigidity and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray.

Water, oil & dust tight buttable enclosures

The 5412 ESBU water, oil & dust tight enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESBU are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure

when the door is open.. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. **The hinges are arranged to allow the installation of rows of enclosures, side by side.**

A ¼ turn locking mechanism (or 3 point latch system on larger enclosures) ensures positive closing. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel,** which is

double bent* for maximum rigidity and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pre-treated base. Box is ANSI/ASA 61 smooth gray.

**CSA Certified / UL Listed
NEMA/EEMAC 4-12 / IP66**

Water, oil & dust tight insulated enclosures (welded feet)

The 5412 ESTH insulated enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESTH are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. **One layer of 0.75" foil faced R5 insulation, is installed over the inner surface of the enclosures body and door.** The opening has a curled lip around all sides to

increase rigidity and prevent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The pins of the concealed hinges can be pulled out to remove the door. A ¼ turn locking mechanism ensures positive closing. External mounting feet are provided.

Each enclosure comes complete with a 12 GA galvanized inner panel, which is double

bent* for maximum rigidity and mounts on M8 welded studs.

Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray.

Water, oil & dust tight pressurization enclosures (welded feet)

The 5412 ESPR pressurized enclosures are used in conjunction with a purging/pressurization system in hazardous locations as an alternative to NEMA 7 and 9 enclosures. They provide protection against dust, oil and jets of water coming from any direction. The 5412 ESPR are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the

enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. Special hinges, designed especially for use in pressurization enclosures, provide optimal protection. The door is secured by a series of quarter-turn locks. External mounting tabs are welded onto the back of the cabinet. **Each enclosure comes complete with a 12 GA galvanized inner panel,** which is double

bent* for maximum rigidity and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray.

**CSA Certified / UL Listed
NEMA/EEMAC 4-12 / IP66**

Water, oil & dust tight quarter turn cover enclosures

The 5412 ESQT water, oil & dust tight enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESQT are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping

water from entering the enclosure when the cover has been removed. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal.

Quarter turn locking mechanisms on all sides ensure positive closing. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel**, which is double bent* for maximum rigidity

and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pre-treated base. Box is ANSI/ASA 61 smooth gray.

Double gasketed water, oil & dust tight enclosures

The 5412 ESDG double gasket, water, oil & dust tight enclosures are used outdoors or indoors in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESDG are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the

enclosure when the cover has been opened. A double gasket system, consisting of an external gasket that acts as a front line barrier against liquids, works in conjunction with the internal, high quality robotically poured-in-place, seamless gasket to ensure a complete and durable water tight seal. Quarter turn locking mechanisms on all sides ensure positive closing. Internal mounting holes are provided. **Each enclosure comes complete with**

a 12 GA galvanized inner panel, which is double bent* for maximum rigidity and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray.

Heavy duty water, oil & dust tight enclosures

The 5412 ESHD water, oil & dust tight enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESHD are made of high quality 12 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the

door is open. The pins of the concealed hinges can be pulled out to remove the door. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. A ¼ turn locking mechanism (or 3 point latch system on larger enclosures) ensures positive closing. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel**, which is double bent* for maximum rigidi-

ty and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pre-treated base. Box is ANSI/ASA 61 smooth gray.

Water, oil and dust tight double door enclosures

The 5412 ESDD water, oil & dust tight enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESDD are made of high quality 14 GA steel, with continuously welded corner seams continuously welded. The opening has a curled lip around all sides to increase rigidity and prevent drip-

ping water from entering the enclosure when the doors are open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The pins of the concealed hinges can be pulled out to remove the door. A ¼ turn locking mechanism ensures positive closing. Internal mounting holes are provided. Each enclosure comes complete with a 12 GA galvanized inner panel,

which is double bent* for maximum rigidity and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray. **CSA Certified / UL Listed NEMA/EEMAC 4-12 / IP66**

Water, oil & dust tight double door enclosures

The 5412 DDS water, oil & dust tight double door enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing.

The 5412 DDS are made of high quality code gauge steel, with continuously welded corner seams. The center post is removable to facilitate the installation of the inner panel. The opening has a curled lip around all sides to increase rigidity and prevent drip-

ping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal.

The pins of the concealed heavy duty die cast hinges can be pulled out to remove the door. A ¼ turn locking mechanism ensures positive closing. Two 12" floor stands are welded to the cabinet. Body stiffeners are provided on larger models.

Each enclosure comes complete with a galvanized inner

panel, which is double bent for maximum rigidity. A panel guide and support is provided to facilitate panel installation. A print pocket is provided. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray.

Oil, dust & water-tight free standing enclosures

The 9412 water, oil & dust tight enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 9412 are made of high quality code gauge steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the

door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The pins of the concealed hinges can be pulled out to remove the door. Quarter turn locking mechanisms on three sides of the door ensure positive closing. Optional back panels can be mounted at any depth, using the three sets of rails welded on the sides of the cabinet. Side panels can also be ordered separately. A print pock-

et is provided. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized.

NEMA 4-4X ENCLOSURES

Stainless steel JIC enclosures

The 5412 ESSCH are used indoors or outdoors to protect the enclosed controls from dust, dirt, oil and water splashing. The 5412 ESSCH are made of high quality 16 GA (Type 304) stainless steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. This enclosure features

incorporated hinging, meaning that the hinge is a part of the box and part of the cover. This minimizes the amount of welding and allows the door to be easily removed by pulling out the full length mushroom head hinge pin. Very few JIC type enclosures offer this considerable advantage. **EXM's exclusive flange-mounted 1/4 turn locking system** ensures positive closing while leaving a fully workable mounting surface on the door. **Each enclosure comes complete with a 14 GA galvanized inner panel,**

which mounts on welded nuts. The four external wall-mounting holes are oblong to facilitate installation and the mounting feet are incorporated into the body of the enclosure. The enclosures' exterior and interior are brushed stainless steel. Inner panel is galvanized (other colors available).

JIC enclosures (welded feet)

The 5412 ESSMPCH are used indoors or outdoors to protect the enclosed controls from dust, dirt, oil and water splashing. The 5412 ESSMPCH are made of high quality 16 GA (Type 304) stainless steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable

water tight seal. The enclosures feature die cast hinges, which are bound to the cover by an exclusive concealed hinge pin system. The covers are interchangeable and can be removed by unfastening the anti-vibration lock nuts. **EXM's exclusive flange-mounted ¼ turn locking system** ensures positive closing. **Each enclosure comes complete with a 14 GA galvanized inner panel,** which mounts on welded nuts. The enclosure can be internally or externally mounted using the

incorporated wall mounting feet. These feet have oblong holes to facilitate installation. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is AINSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

Painted stainless steel JIC enclosures

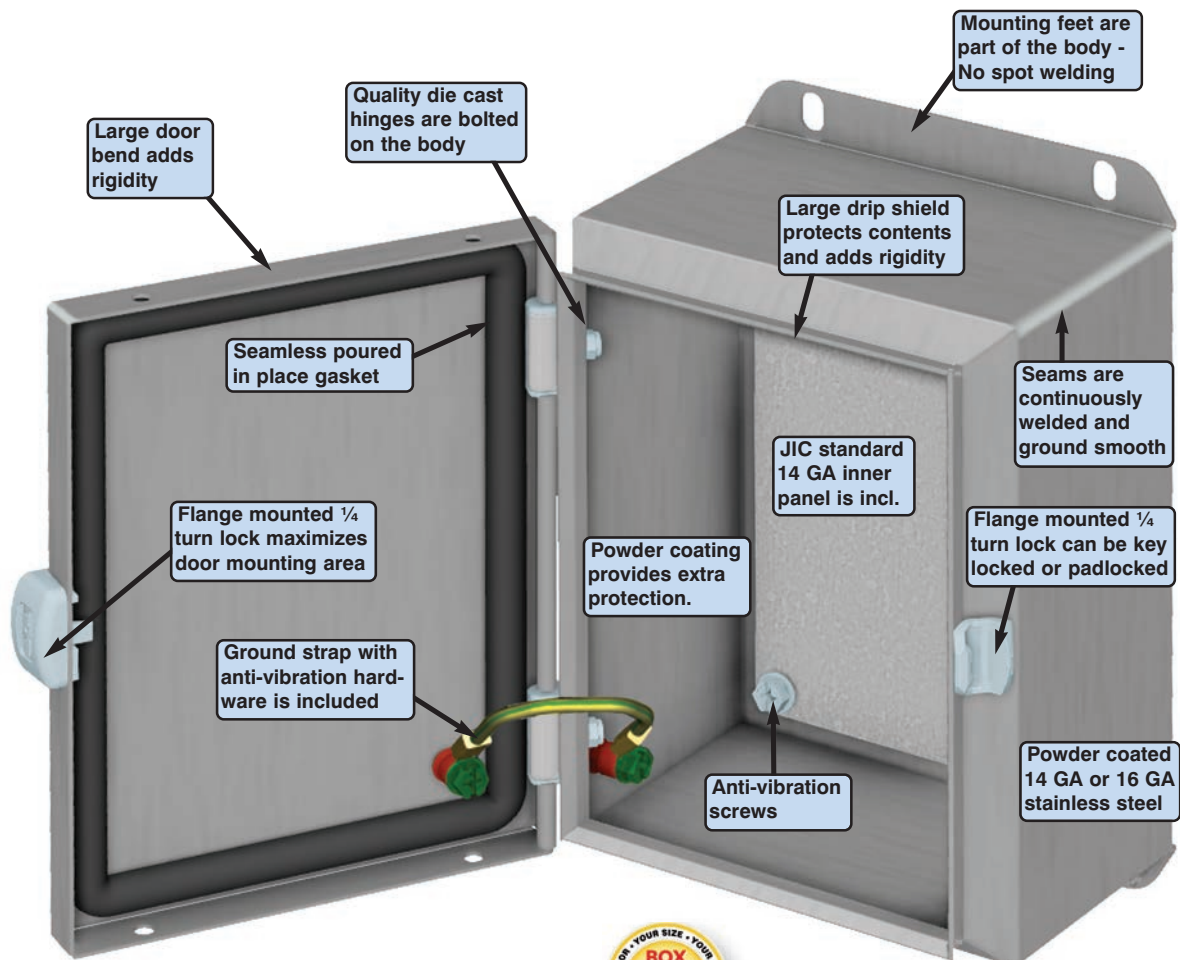

The 5412 ESSPCH are used indoors or outdoors to protect the enclosed controls from dust, dirt, oil and water splashing. The 5412 ESSPCH are made of high quality 16 GA (Type 304) stainless steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. This enclosure features incorporated hinging, meaning

that the hinge is a part of the box and part of the cover. This minimizes the amount of welding and allows the door to be easily removed by pulling out the full length mushroom head hinge pin. Very few JIC type enclosures offer this considerable advantage. **EXM's exclusive flange-mounted ¼ turn locking system** ensures positive closing. **Each enclosure comes complete with a 14 GA galvanized inner panel,** which mounts on welded nuts. The four external wall-mounting holes are oblong to facilitate installation and the mounting feet

are incorporated into the body of the enclosure. The powder coating further protects the stainless steel against the elements. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

JIC enclosures (screw-on feet)

The 5412 EALM are used indoors or outdoors to protect the enclosed controls from dust, dirt, oil and water splashing. The 5412 EALM are made of high quality 0.063" (Type 5052 H - 32) aluminium, with continuously welded corner seams.

The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a com-

plete and durable water tight seal. The enclosures feature die cast hinges, which are bound to the cover by an exclusive concealed hinge pin system. The covers are interchangeable and can be removed by unfastening the anti-vibration lock nuts.

EXM's exclusive ¼ turn locking system ensures positive closing. **Each enclosure comes complete with a 14 GA galvanized inner panel**, which mounts on welded nuts. The enclosure can be internally or externally mount-

ed using the incorporated wall mounting feet. These feet have oblong holes to facilitate installation. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is AINSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

NEMA 4-4X ENCLOSURES

5412 ESSLC

Oil & dust tight lift off cover stainless steel enclosures (screw-on feet)

The 5412 ESSLC lift off cover, water oil and dust tight enclosures are used indoors or outdoors, in areas where a corrosion problem may exist, or where the enclosures may be subjected to hosing or water coming from any direction. The box and cover are made of high quality 16 GA (Type 304) stainless steel, with all seams continuously welded. A high quality, robotically poured-in-

place, seamless gasket ensures a complete and durable water tight seal. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering when the door is open. A flange-mounted ¼ turn lock ensures positive closing. The enclosure can be internally or externally mounted using the included die cast wall mounting feet.

Each enclosure comes complete with a 14 GA galvanized steel inner panel, which mounts on welded nuts. The enclosures are brushed stainless steel.

Stainless steel hinged wiring troughs (screw-on feet)

The 1412 CHSSP...IP stainless steel hinged cover oil and dust tight troughs with inner panel are used indoors to protect the enclosed controls from dust, dirt, oil and water splashing. The box and cover are made of high quality 16 GA steel, with all seams continuously welded. The opening has a flange around all sides, which increases rigidity and

ensures complete contact with the poured, high quality, oil resistant seamless gasket. The door is secured by convenient 1/4 turn locks and can be opened over 180°. Internal mounting holes are provided and a wall mounting kit is supplied. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is

ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

Stainless steel hinged wiring troughs (screw-on feet)

The 1412 CHSS stainless steel hinged cover oil and dust tight troughs are used indoors or outdoors to protect the enclosed controls from dust, dirt, oil and water splashing. The box and cover are made of high quality 16 GA (Type 304) stainless steel, with

all seams continuously welded. The opening has a flange around all sides, which increases rigidity and ensures complete contact with the poured, high quality, oil resistant seamless gasket. The door is secured by convenient 1/4 turn locks and can be opened

over 180°. Internal mounting holes are provided and a wall mounting kit is supplied. The enclosures are unpainted and brushed smooth. I

Water, oil & dust tight stainless steel enclosures

The 5412 ESS water, oil & dust tight enclosures are used indoors or outdoors, in areas where a corrosion problem exists or where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESS are made of high quality 14 GA or 16 GA (Type 304) stainless steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and pre-

vent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The pins of the concealed hinges can be pulled out to remove the door. A ¼ turn locking mechanism (or 3 point latch system on larger enclosures) ensures positive closing. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galva-**

nized inner panel, which is double bent* for maximum rigidity and mounts on M8 welded studs. The enclosures' exterior is unpainted and brushed smooth. Inner panel is galvanized (other colors available).

Water, oil & dust tight painted stainless steel enclosures

The 5412 ESSP water, oil & dust tight enclosures are used indoors or outdoors, in areas where a corrosion problem exists or where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESSP are made of high quality 14 GA or 16 GA (Type 304) stainless steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water

from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The pins of the concealed hinges can be pulled out to remove the door.

A ¼ turn locking mechanism ensures positive closing. Internal mounting holes are provided. Each enclosure comes complete with a 12 GA galvanized inner panel, which is double bent* for maximum rigidity and

mounts on M8 welded studs. The powder coating further protects the stainless steel against the elements. Enclosures are finished with heat fused powder paint, electrostatically applied on a pre-treated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

Water, oil & dust tight aluminium enclosures

The 5412 EAL water, oil & dust tight enclosures are used indoors or outdoors, in areas where a corrosion problem exists or where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 EAL are made of high quality 0.080" aluminium (Type 5052 H-32), with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the

enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The pins of the concealed hinges can be pulled out to remove the door. A ¼ turn locking mechanism (or 3 point latch system on larger enclosures) ensures positive closing. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel**, which is double bent* for maximum rigidity

and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed

Water, oil & dust tight stainless steel windowed enclosures

The 5412 ESSW water, oil & dust tight enclosures are used indoors or outdoors, in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESSW are made of high quality 14 GA or 16 GA (Type 304) stainless steel, with continuously welded corner seams. The window is made with self-extinguishing polycarbonate. The opening has a curled lip around

all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The pins of the concealed hinges can be pulled out to remove the door. A ¼ turn locking mechanism ensures positive closing. Internal mounting holes are provided.

Each enclosure comes complete with a 12 GA galvanized inner panel, which is double bent* for maximum rigidity and mounts on M8 studs. The enclosures are brushed smooth. Inner panel is galvanized (other colors available).

Stainless steel quarter turn cover enclosures

The 5412 ESSQT water, oil & dust tight enclosures are used indoors or outdoors, in areas where a corrosion problem exists or where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESSQT are made of high quality 14 GA or 16 GA (Type 304) stainless steel, with continuously welded corner seams. The opening has a curled

lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the cover has been removed. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. Quarter turn locking mechanisms on all sides ensure positive closing. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galva-**

nized inner panel, which is double bent* for maximum rigidity and mounts on M8 welded studs. The enclosures are brushed smooth. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed

Aluminium quarter turn cover enclosures

The 5412 EALQT water, oil & dust tight enclosures are used indoors or outdoors, in areas where a corrosion problem exists or where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 EALQT are made of high quality 0.080" aluminium (Type 5052 H-32), with continuously welded corner seams. The opening has a curled lip around all sides to increase

rigidity and prevent dripping water from entering the enclosure when the cover has been removed. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal.

Quarter turn locking mechanisms on all sides ensure positive closing. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel**, which is double bent* for maximum rigidity

and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pre-treated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

Water, oil & dust tight stainless steel buttable enclosures

The 5412 ESSBU water, oil & dust tight enclosures are used indoors or outdoors, in areas where a corrosion problem exists or where the enclosures are subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESSBU are made of high quality 14 GA or 16 GA (Type 304) stainless steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase

rigidity and prevent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. **The hinges are arranged to allow the installation of rows of enclosures, side by side.**

A ¼ turn locking mechanism (or 3 point latch system on larger enclosures) ensures positive closing. Internal mounting holes are provided. **Each enclosure**

comes complete with a 12 GA galvanized inner panel, which is double bent* for maximum rigidity and mounts on M8 welded studs. The enclosures are brushed smooth. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed
NEMA/EEMAC 4X / IP66**

Water, oil & dust tight aluminium buttable enclosures

The 5412 EALBU water, oil & dust tight enclosures are used indoors or outdoors, in areas where a corrosion problem exists or where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 EALBU are made of high quality 0.080" aluminium (Type 5052 H-32), with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping

water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. **The hinges are arranged to allow the installation of rows of enclosures, side by side.**

A ¼ turn locking mechanism (or 3 point latch system on larger enclosures) ensures positive closing. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel,** which is

double bent* for maximum rigidity and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pre-treated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

Stainless steel double door enclosures

The 5412 SSDD water, oil & dust tight double door enclosures are used indoors or outdoors, in areas where the enclosures may be subject to hosing or water coming from any direction, or where corrosion may be a problem.

The 5412 SSDD are made of high quality code gauge (type 304) stainless steel, with continuously welded corner seams. The center post is removable to facilitate the installation of the inner panel. The opening has a curled lip around all sides to increase rigidity and

prevent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The pins of the concealed heavy duty die cast hinges can be pulled out to remove the door. A ¼ turn locking mechanism ensures positive closing. Two 12" floor stands are welded to the cabinet.

Each enclosure comes complete with a galvanized inner

panel, which is double bent for maximum rigidity. A panel guide and support is provided to facilitate panel installation. A print pocket is provided. The enclosures are brushed smooth. Inner panel is galvanized (other colors available).

Wall mounted double door stainless steel enclosures

The 5412 ESSDD water, oil & dust tight enclosures are used indoors or outdoors, in areas where a corrosion problem exists or where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESSDD are made of high quality 14 GA (Type 304) stainless steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and

prevent dripping water from entering the enclosure when the doors are open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The pins of the concealed hinges can be pulled out to remove the door. A ¼ turn locking mechanism ensures positive closing. Internal mounting holes are provided.

Each enclosure comes complete with a 12 GA galvanized

inner panel, which is double bent* for maximum rigidity and mounts on M8 welded studs. The enclosures are brushed smooth. Inner panel is galvanized (other colors available).

Stainless steel free standing enclosure

The 9412 SS water, oil & dust tight enclosures are used indoors or outdoors, in areas where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 9412 SS are made of high quality code gauge (type 304) stainless steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent drip-

ping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The pins of the concealed hinges can be pulled out to remove the door. Quarter turn locking mechanisms on three sides of the door ensure positive closing. Optional back panels can be mounted at any depth, using the three sets of rails

welded on the sides of the cabinet. Side panels can also be ordered separately. A print pocket is provided. The enclosures are brushed smooth. Inner panel is galvanized (other colors available).

Standard stainless steel pushbutton enclosure

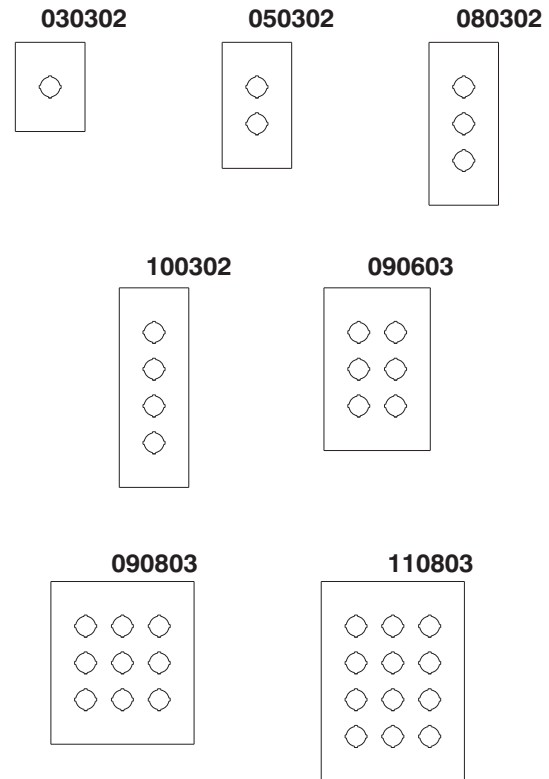

The 1412 SDSS oil and dust tight pushbutton enclosures are built to provide protection against corrosion, dirt, dust and oil, for all brands of oil tight pushbuttons, switches and pilot lights. The 1412 SDSS are made of high quality 16 GA (type 304) stainless steel, with all seams continuously welded. A high quality, seamless, poured gasket ensures a com-

plete and durable seal of the enclosure. Cover screws thread into sealed wells and are captive. The enclosure can be internally or externally mounted using the included die cast wall mounting feet. These feet have oblong holes to facilitate installation. Hole plugs (880 HP series) are available to seal unused holes. The 1412 SDSS is available with stan-

dard and miniature pushbutton holes. The enclosures' exterior is unpainted and brushed smooth. Inner panel is galvanized (other colors available).

NEMA 4X FIBERGLASS

Screw cover corrosion resistant fiberglass enclosures

The 5412 ESFRS water, oil & dust tight enclosures are used indoors or outdoors, in areas where a corrosion problem exists or where the enclosures may be subject to hosing or water coming from any direction, or for protection against dust, dirt or oil splashing. The 5412 ESFRS is aesthetically designed and exclusively produced by EXM, and is made of a SMC polyester fiberglass composite. Fiberglass is

the material of choice for numerous industrial applications. Its electrical, chemical and physical properties allow reinforced fiberglass to be used in many environments, and for a wide variety of applications. A high quality, robotically poured-in-place, seamless gasket ensures a complete NEMA 4X seal. The cover screws are made of stainless steel. The mounting feet can be installed at 0° or 90°, to be used

either at the top and bottom of the box or at its sides. The 5412 ESFRS enclosures come with a JIC standard 14 GA galvanized inner panel, which can be interchanged with the panels used in ESCH enclosures. Inner panels and mounting feet are secured by anti-vibration screws.

Quick release submersible polycarbonate enclosures

The 5600 ESPLQ are suited for use indoors or outdoors where corrosion is a problem, to protect the enclosed equipment from water coming from any direction, dust, dirt and oil. The 5600 ESPLQ is made of a polyester and polycarbonate hybrid blend, aesthetically designed and produced exclusively by EXM. It is the material of choice for numerous industrial applications. Its

electrical, chemical and physical properties allow to be used in many environments and for a wide variety of applications. A high quality molded gasket ensures a complete NEMA 6P seal. The cover screws are made of stainless steel. The body of the 5600 ESPLQ enclosures incorporates mounting holes. Enclosures comes complete with a 14 GA galvanized inner panel,

which can be mounted in the rear of the enclosure on the cover. Inner panels and mounting feet are secured by anti-vibration screws. Quick release latches can be removed and replaced by cover screw inserts (see p.396).

Accessories for the 5600 ESPL series.**880 ESPL-SCK / Screw bracket kit**

Replacement cover screw bracket kit for the 5600 ESPLSC can be ordered. The kit is ordered in packs of 3. Furthermore, EXM hinge cover plastic enclosures (5600 ESPLQ and 5600 ESPLH) can be easily converted to screw cover enclosures, and vice versa (screw cover sold separately).

**880 ESPL-HK / Hinge kit**

Replacement hinges for the 5600 ESPLQ and 5600 ESPLH can be ordered. The kits are ordered in packs of 3.

The screws bracket on the 5600 ESPLSC can be removed and replaced by 880 ESPL-HK hinges. Therefore, EXM screw cover plastic enclosures can be easily converted to hinge cover enclosures, and vice versa (hinge cover sold separately).

**880 ESPL-QR / Quick Release kit**

The adjustable depth kit for inner panel allows the installation of the inner panel at any depth from front to rear of the enclosure. Kits include mounting hardware.

**880 ESPL-QR / Quick Release kit**

The adjustable depth kit for inner panel allows the installation of the inner panel at any depth from front to rear of the enclosure. Kits include mounting hardware.

Accessories for the 5600 ESPL series.

880 ESPL-DS / Door stop kit

The **880 ESPL-DS** door stop kits limit the opening of the doors on the ESPL family of products. Kits include mounting hardware.

880 ESPL-AIP / Adjustable depth kit for IP

The adjustable depth kit for inner panel allows the installation of the inner panel at any depth from front to rear of the enclosure. Kits include mounting hardware.

880 ESPL-PK / Padlock kit

The **880 ESPL-PK** padlock kit is a heavy duty cast part that once installed on the quick release latch renders it palockable. Finish is in zinc plated.

Sold individually.

EMC ENCLOSURES

EMI/RFI shielded JIC NEMA 4/12 enclosures

The 5412 CHE are used indoors or outdoors to protect the enclosed controls from dust, dirt, oil and water splashing. A special conductive gasket protects the contents against a certain degree of electromagnetic interference. The 5412 CHE are made of high quality 16 GA stainless steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. This enclosure features incorporated hinging, meaning that the hinge

is a part of the box and part of the cover. This minimizes the amount of welding and allows the door to be easily removed by pulling out the full length mushroom head hinge pin. Very few JIC type enclosures offer this considerable advantage.

EXM's 1/4 turn locking system ensures positive closing while leaving a full workable mounting surface on the door.

Each enclosure comes complete with a 14 GA galvanized inner panel, which mounts on welded nuts. The four external wall-mounting holes are oblong

to facilitate installation, and the mounting feet are incorporated into the body of the enclosure. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

EMI/RFI shielded NEMA 4/12 enclosures

The 5412 ESE are used indoors or outdoors to protect the enclosed controls from dust, dirt, oil and water splashing. A special conductive gasket protects the contents against a certain degree of electromagnetic interference. The 5412 ESE are made of high quality 14 GA or 16 GA stainless steel, with corner seams continuously welded. The opening has a curled lip around all sides to pre-

vent dripping water from entering the enclosure when the door is open, it also increases rigidity. The pins of the concealed hinges can be pulled out to remove the door.

A ¼ turn locking mechanism ensures positive closing. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel, which mounts on**

M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

Lay-in duct, hinged cover

The 1100 series lay-in ducts are made of code gauge steel and designed to permit fast and easy installation of multiple wire runs. The corners of components are aesthetically rounded. The hinged covers are secured by convenient quarter-turn locks, which facilitate access to the contents of the components. Available without knockouts (add suffix "N" to the catalog number).

Knockouts are provided on two sides of the body. All accessories for a complete system such as 22½°, 45° and 90° elbows, crosses, T's, reducers, telescope fittings have removable covers. Joiner plates are linked by carriage bolts and anti-vibration nuts, which can be installed using minimum tooling. All of the painted components are finished with heat fused powder

paint, electrostatically applied on a pretreated base. Finish is ANSI/ASA 61 smooth gray (other colors available).

Lay-in duct, screwed cover

The 1100 series lay-in ducts are made of code gauge steel and designed to permit fast and easy installation of multiple wire runs. The corners of components are rounded. The covers are secured by screws. Knockouts are provided on two sides of the body. Also available without knockouts (add suffix "N" to the catalog number).

All accessories for a complete system such as 22½°, 45° and 90° elbows, crosses, T's, reducers, telescope fittings have removable covers. Joiner plates are linked by carriage bolts and anti-vibration nuts, which can be installed using minimum tooling. All of the painted components are finished with heat fused powder paint,

electrostatically applied on a pre-treated base. Finish is ANSI/ASA 61 smooth gray (other colors available).

Lay-in duct, quarter-turn lock cover

The 1150 series lay-in ducts are made of high quality code gauge stainless steel, and are designed to permit fast and easy installation of multiple wire runs. The covers are secured by quarter-turn latches. All accessories for a complete system, such as 45° and 90°

elbows, offsets, T's, and reducers, have removable covers. Joiner are linked by carriage bolts and anti-vibration nuts which can be installed using minimum tooling. All of the components are unpainted and brushed smooth #4.

Watertight pull through wireway, gasket poured in place

The re-designed 1500 series water tight lay-in wireway is a complete system that permits fast and easy installation of multiple wire runs. Each section and accessory include one side completely opened to allow lay-in of wires instead of being restricted to pull through. The wireways are made high quality 14 GA steel complete with bolted flanges. All

seams are continuously welded. The covers are hinged and several quick release draw pull latches assure a tight closing. A high quality, poured in place, seamless gasket is present on the covers. The enhanced flange construction now integrates a gasket embedded directly onto the flange itself. Components are finished with heat fused powder

paint, electrostatically applied on a pretreated base. Finish is ANSI/ASA61 smooth gray.

**CSA Certified / UL Listed
NEMA/EEMAC 4-12 / IP66**

**Refer to p.796 to validate
choice of substrate for the
application**

The access to the wireway is exempt of any interference due to the design of the new bridges that allow a complete opening

The brand new bridges feature a retaining system that prevents them from being separated from the wireway, thus facilitating the manipulation in challenging areas

The covers of the wireway allow an opening of more than 200°

The connection in between components is facilitated by a new design that requires less hardware than before

Each cover integrate a quick release draw pull latch with a padlock provision, so the wireway can be easily secured

The enhanced flanges are now made of die cast aluminum improving their rigidity at a fraction of the weight

The redesigned flanges now incorporate a gasket directly embedded onto the flange itself, combining 2 parts into one to ease the assembly process

The construction of the remodeled 1500 series wireway achieves a NEMA4 compliance by following it's guidelines

The 1500 wireway consist of many components and accessories in order to accommodate countless designs

Watertight pull through wireway, gasket poured in place

The 1412 series is a complete water tight wireway system, which is used indoor or outdoors, in areas where the wireway may be subjected to hosing or water coming from any direction. The troughs are screw-on and are made of high quality code gauge steel, with welded end flanges. All seams have been continuous-

ly welded. Covers are hinged and secure closing is assured by several, quick-release, ¼ turn locks. A high quality, poured-in-place, seamless gasket is installed between the door and trough, and between the sections and accessories to ensure integrity. Components are finished with heat fused powder

paint, electrostatically applied on a pretreated base. Finish is ANSI/ASA 61 smooth gray.

**CSA Certified / UL Listed
NEMA/EEMAC 4-12 / IP66**

Refer to p.796 to validate choice of substrate for the application

Stainless steel watertight pull through wireway

The 1412 X series is a complete water tight wireway system, which is used indoor or outdoors, in areas where corrosion may be a problem, or where the wireway may be subjected to hosing or water coming from any direction. The troughs are screw-on and are

made of high quality code gauge (Type 304) stainless steel, with welded end flanges. All seams have been continuously welded. Covers are hinged and secure closing is assured by several, quick-release, ¼ turn locks. A high quality, poured-in-place,

seamless gasket is installed between the door and trough, and between the sections and accessories to ensure integrity. The enclosures' exterior is unpainted and brushed smooth. **CSA Certified / UL Listed NEMA/EEMAC 4X / IP66**

NEMA 1/12-13/4/4X SAFETY DISCONNECT

Safety disconnect enclosures

The **5100 ESA** right flange-mounted safety disconnect enclosures are used where the control installation does not require a high degree of protection (such as watertight or dust tight), but where a quality enclosure is needed. The 5100 ESA are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. The opening has a curled lip around three sides to increase rigidity and pre-

vent dripping water from entering the enclosure when the door is open. The pins of the concealed hinges can be pulled out to remove the door. A ¼ turn locking mechanism interlocks with the switch to prevent opening the door when the power is live. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel**, which is double bent † for maximum rigidity

and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed
NEMA/EEMAC 1 / IP30**

Refer to p.796 to validate choice of substrate for the application

If the 5100 ESA is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
- an operating handle 1494V-H1
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
- if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep

Ordering a Cutler Hammer Disconnect switch catalog C361

- an operating mechanism with the disconnect switch
- an operating handle (C361-H2 or H4)

Circuit breaker operators catalog C371

- a Cutler hammer or Westinghouse circuit breaker
- an operating mechanism
- an operating handle

Ordering a Square D Class 9422 Disconnect switch

- an operating mechanism with the disconnect switch class 9422
- an operating mechanism handle class 9422 Type A-1

Circuit breaker

- a Square D circuit breaker
- an operating mechanism class 9422

- an operating mechanism handle class 9422 Type A-1

Ordering a General Electric Disconnect switch

- a disconnect switch QMR or QMW
- a fuse clip kit if required
- a TDAI flange handle
- an operating mechanism, variable depth

Circuit breakers

- a circuit breaker
- a TDAI flange handle
- an operating handle 1494V-H11
- an operating mechanism, variable depth

Ordering an Asea Brown Boveri Disconnect switch

- a switch flange operated fuse if required
- a DSFHS-12 shaft
- a DSFHN-HS12 handle

Circuit breaker

- a circuit breaker
- an operating mechanism
- a FHS-12 shaft
- a FHN-HS12 handle

Ordering an I-T-E Max-Flex™ Disconnect switch

- a basic right hand switch
- a fuse kit if required
- a handle FHOHS flange mounted

- an operator FHOSO6R
- a cable FHOECO36

Circuit breaker

- a circuit breaker
- a set of pressure wire connectors
- a handle FHOH flange mounted
- an operating mechanism
- a standard cable 36"

Ordering a Westinghouse Disconnect switch

- a disconnect switch or circuit breaker type DS
- a yoke assembly and backplate
- a rod and brace assembly
- a pivot mechanism
- an operating handle

Disconnect switches and operating mechanisms are not furnished with the enclosures.

Data subject to change without notice.

Safety disconnect enclosures

The 5100 ESY right flange-mounted safety disconnect enclosures are used where the control installation does not require a high degree of protection (such as watertight or dust tight), but where a quality enclosure is needed. The 5100 ESY are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. The opening has a curled lip around three sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. The pins of the concealed hinges can be pulled out

to remove the door. The 5100 ESY features a convenient factory-installed door handle which interlocks with the disconnect switch and facilitates the installation of the enclosure, streamlines the ordering process and increases the ease of use of the enclosure. Enclosures higher than 42" are equipped with a 3 point locking mechanism while smaller enclosures come with a 2 point locking mechanism. Door stiffeners are also provided on larger models. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA**

galvanized inner panel, which is double bent† for maximum rigidity and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pre-treated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed
NEMA/EEMAC 1 / IP30**

Refer to p.796 to validate choice of substrate for the application

If the 5100 ESY is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
- an operating handle 1494V-H1
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
- if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep

Ordering a Cutler Hammer Disconnect switch catalog C361

- an operating mechanism with the disconnect switch
- an operating handle (C361-H2 or H4)

Circuit breaker operators catalog C371

- a Cutler hammer or Westinghouse circuit breaker
- an operating mechanism
- an operating handle

Ordering a Square D Class 9422 Disconnect switch

- an operating mechanism with the disconnect switch class 9422
- an operating mechanism handle class 9422 Type A-1

Circuit breaker

- a Square D circuit breaker
- an operating mechanism class 9422
- an operating mechanism handle class 9422 Type A-1

Ordering a General Electric Disconnect switch

- a disconnect switch QMR or QMW
- a fuse clip kit if required
- a TDAI flange handle
- an operating mechanism, variable depth

Circuit breakers

- a circuit breaker
- a TDAI flange handle
- an operating handle 1494V-H11
- an operating mechanism, vari-

able depth

Ordering an Asea Brown Boveri Disconnect switch

- a switch flange operated fuse if required
- a DSFHS-12 shaft
- a DSFHN-HS12 handle

Circuit breaker

- a circuit breaker
- an operating mechanism
- a FHS-12 shaft
- a FHN-HS12 handle

Ordering an I-T-E Max-Flex™ Disconnect switch

- a basic right hand switch
- a fuse kit if required
- a handle FHOHS flange mounted
- an operator FHOSO6R
- a cable FHOECO36

Circuit breaker

- a circuit breaker
- a set of pressure wire connectors
- a handle FHOH flange mounted
- an operating mechanism
- a standard cable 36"

Ordering a Westinghouse Disconnect switch

- a disconnect switch or circuit breaker type DS
- a yoke assembly and backplate
- a rod and brace assembly
- a pivot mechanism
- an operating handle

Disconnect switches and operating mechanisms are not furnished with the enclosures.

Watertight safety disconnect enclosures

The 5412 ESA right flange-mounted safety disconnect enclosures are used indoors or outdoors, where the enclosures may be subject to hosing or water coming from any direction or for protection against dirt, dust or oil. The 5412 ESA are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. The opening has a curled lip around three sides to increase rigidity and prevent dripping

water from entering the enclosure when the door is open. The pins of the concealed hinges can be pulled out to remove the door. A ¼ turn locking mechanism interlocks with the switch to prevent opening the door when the power is live. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel**, which is double bent† for maximum rigidity and mounts on M8 welded

studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pre-treated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed
NEMA/EEMAC 12-13 / IP66**

Refer to p.796 to validate choice of substrate for the application

If the 5412 ESA is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
- an operating handle 1494V-H1
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
- if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep

Ordering a Cutler Hammer Disconnect switch catalog C361

- an operating mechanism with the disconnect switch
- an operating handle (C361-H2 or H4)

Circuit breaker operators catalog C371

- a Cutler hammer or Westinghouse circuit breaker
- an operating mechanism
- an operating handle

Ordering a Square D Class 9422 Disconnect switch

- an operating mechanism with the disconnect switch class 9422
 - an operating mechanism handle class 9422 Type A-1
- ### Circuit breaker
- a Square D circuit breaker
 - an operating mechanism class 9422
 - an operating mechanism handle class 9422 Type A-1

Ordering a General Electric Disconnect switch

- a disconnect switch QMR or QMW
- a fuse clip kit if required
- a TDAI flange handle
- an operating mechanism, variable depth

Circuit breakers

- a circuit breaker
- a TDAI flange handle
- an operating handle 1494V-H11
- an operating mechanism, variable depth

Ordering an Asea Brown Boveri

Disconnect switch

- a switch flange operated fuse if required
- a DSFHS-12 shaft
- a DSFHN-HS12 handle

Circuit breaker

- a circuit breaker
- an operating mechanism
- a FHS-12 shaft
- a FHN-HS12 handle

Ordering an I-T-E Max-Flex™ Disconnect switch

- a basic right hand switch
- a fuse kit if required
- a handle FHOHS flange mounted

- an operator FHOSO6R

- a cable FHOECO36

Circuit breaker

- a circuit breaker
- a set of pressure wire connectors
- a handle FHOH flange mounted
- an operating mechanism
- a standard cable 36"

Ordering a Westinghouse Disconnect switch

- a disconnect switch or circuit breaker type DS
- a yoke assembly and backplate
- a rod and brace assembly
- a pivot mechanism
- an operating handle

Disconnect switches and operating mechanisms are not furnished with the enclosures.

Data subject to change without notice.

i.e.: 5412 ESA603716TH → Insulated steel enclosure

Safety disconnect enclosures

The **5500 ESY** right flange-mounted safety disconnect enclosures are used indoors for protection against dirt, dust and water splashing. The 5500 ESY are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. The opening has a curled lip around three sides to increase rigidity and prevent dripping water from entering the enclosure when the door is open. The pins of the concealed hinges can be pulled out to remove the door. The 5500 ESY features a convenient factory-

installed door handle, which interlocks with the disconnect switch and facilitates the installation of the enclosure, streamlines the ordering process and increases the ease of use of the enclosure. Enclosures higher than 42" are equipped with a 3 point locking mechanism while smaller enclosures come with a 2 point locking mechanism. Door stiffeners are also provided on larger models. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel, which is dou-**

ble bent† for maximum rigidity and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed
NEMA/EEMAC 12-13 / IP65**

Refer to p.796 to validate choice of substrate for the application

If the 5500 ESY is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
- an operating handle 1494V-H1
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
- if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep

Ordering a Cutler Hammer Disconnect switch catalog C361

- an operating mechanism with the disconnect switch
- an operating handle (C361-H2 or H4)

Circuit breaker operators catalog C371

- a Cutler hammer or Westinghouse circuit breaker
- an operating mechanism
- an operating handle

Ordering a Square D Class 9422 Disconnect switch

- an operating mechanism with the disconnect switch class 9422
- an operating mechanism handle class 9422 Type A-1

Circuit breaker

- a Square D circuit breaker
- an operating mechanism class 9422
- an operating mechanism handle class 9422 Type A-1

Ordering a General Electric Disconnect switch

- a disconnect switch QMR or QMW
- a fuse clip kit if required
- a TDAI flange handle
- an operating mechanism, variable depth

Circuit breakers

- a circuit breaker
- a TDAI flange handle
- an operating handle 1494V-H11
- an operating mechanism, vari-

able depth

Ordering an Asea Brown Boveri Disconnect switch

- a switch flange operated fuse if required
- a DSFHS-12 shaft
- a DSFHN-HS12 handle

Circuit breaker

- a circuit breaker
- an operating mechanism
- a FHS-12 shaft
- a FHN-HS12 handle

Ordering an I-T-E Max-Flex™ Disconnect switch

- a basic right hand switch
- a fuse kit if required
- a handle FHOHS flange mounted
- an operator FHOSO6R
- a cable FHOECO36

Circuit breaker

- a circuit breaker
- a set of pressure wire connectors
- a handle FHOH flange mounted
- an operating mechanism
- a standard cable 36"

Ordering a Westinghouse Disconnect switch

- a disconnect switch or circuit breaker type DS
- a yoke assembly and backplate
- a rod and brace assembly
- a pivot mechanism
- an operating handle

Disconnect switches and operating mechanisms are not furnished with the enclosures.

Data subject to change without notice.

Stainless steel watertight safety disconnect enclosures

The 5412 ESSA right flange-mounted safety disconnect enclosures are used indoors or outdoors, where the enclosures may be subject to hosing or water coming from any direction or for protection against dirt, dust or oil. The 5412 ESSA are made of high quality 14 GA or 16 GA (type 304) stainless steel, with continuously welded corner seams. The opening has a curled lip around three sides to increase rigidity and pre-

vent dripping water from entering the enclosure when the door is open. The pins of the concealed hinges can be pulled out to remove the door.

A ¼ turn locking mechanism interlocks with the switch to prevent opening the door when the power is live. Internal mounting holes are provided. **Each enclosure comes complete with a 12 GA galvanized inner panel,** which is double bent for maxi-

mum rigidity and mounts on M8 welded studs.

The enclosures' exterior is unpainted and brushed smooth. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed
NEMA/EEMAC 4X / IP66**

Refer to p.796 to validate choice of substrate for the application

If the 5412 ESSA is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
- an operating handle 1494V-H1
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
- if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep

Ordering a Cutler Hammer Disconnect switch catalog C361

- an operating mechanism with the disconnect switch
- an operating handle (C361-H2 or H4)

Circuit breaker operators catalog C371

- a Cutler hammer or Westinghouse circuit breaker
- an operating mechanism
- an operating handle

Ordering a Square D Class 9422 Disconnect switch

- an operating mechanism with the disconnect switch class 9422
- an operating mechanism handle class 9422 Type A-1

Circuit breaker

- a Square D circuit breaker
- an operating mechanism class 9422
- an operating mechanism handle class 9422 Type A-1

Ordering a General Electric Disconnect switch

- a disconnect switch QMR or QMW

- a fuse clip kit if required
- a TDAI flange handle
- an operating mechanism, variable depth

Circuit breakers

- a circuit breaker
- a TDAI flange handle
- an operating handle 1494V-H11
- an operating mechanism, variable depth

Ordering an Asea Brown Boveri Disconnect switch

- a switch flange operated fuse if required
- a DSFHS-12 shaft
- a DSFHN-HS12 handle

Circuit breaker

- a circuit breaker
- an operating mechanism
- a FHS-12 shaft
- a FHN-HS12 handle

Ordering an I-T-E Max-Flex™ Disconnect switch

- a basic right hand switch
- a fuse kit if required
- a handle FHOHS flange mounted
- an operator FHOSO6R
- a cable FHOECO36

Circuit breaker

- a circuit breaker
- a set of pressure wire connectors
- a handle FHOH flange mounted
- an operating mechanism
- a standard cable 36"

Ordering a Westinghouse Disconnect switch

- a disconnect switch or circuit breaker type DS
- a yoke assembly and backplate
- a rod and brace assembly
- a pivot mechanism
- an operating handle

Disconnect switches and operating mechanisms are not furnished with the enclosures.

Refer to p.796 to validate choice of substrate for the application

If the 5500 ESSY is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
- an operating handle 1494V-H1
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
- if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep

Ordering a Cutler Hammer

Disconnect switch catalog C361

- an operating mechanism with the disconnect switch
- an operating handle (C361-H2 or H4)

Circuit breaker operators catalog C371

- a Cutler hammer or Westinghouse circuit breaker
- an operating mechanism
- an operating handle

Ordering a Square D Class 9422 Disconnect switch

- an operating mechanism with the disconnect switch class 9422
- an operating mechanism handle class 9422 Type A-1

Circuit breaker

- a Square D circuit breaker
- an operating mechanism class 9422
- an operating mechanism handle class 9422 Type A-1

Ordering a General Electric Disconnect switch

- a disconnect switch QMR or QMW
- a fuse clip kit if required
- a TDAI flange handle
- an operating mechanism, variable depth

Circuit breakers

- a circuit breaker
- a TDAI flange handle
- an operating handle 1494V-H11
- an operating mechanism, vari-

able depth

Ordering an Asea Brown Boveri Disconnect switch

- a switch flange operated fuse if required
- a DSFHS-12 shaft
- a DSFHN-HS12 handle

Circuit breaker

- a circuit breaker
- an operating mechanism
- a FHS-12 shaft
- a FHN-HS12 handle

Ordering an I-T-E Max-Flex™ Disconnect switch

- a basic right hand switch
- a fuse kit if required
- a handle FHOHS flange mounted
- an operator FHOSO6R
- a cable FHOECO36

Circuit breaker

- a circuit breaker
- a set of pressure wire connectors
- a handle FHOH flange mounted
- an operating mechanism
- a standard cable 36"

Ordering a Westinghouse Disconnect switch

- a disconnect switch or circuit breaker type DS
- a yoke assembly and backplate
- a rod and brace assembly
- a pivot mechanism
- an operating handle

Disconnect switches and operating mechanisms are not furnished with the enclosures.

Insulated box? To have your enclosure insulated, add suffix "TH"

i.e.: 5500 ESSY603716TH → Insulated stainless steel enclosure

Double door enclosure for right flange mounted disconnect

The 5500 UFD oil and dust tight right flange mounted safety disconnect enclosures are used indoors for protection against dirt, dust, oil and water splashing. The 5500 UFD are made of high quality code gauge steel with all seams continuously welded. The center post can be removed to facilitate the installation of the inner panel. The ball bearing pins of the concealed die cast hinges can be easily pulled out to remove the doors. Three point automotive padlockable handles

ensure positive closing on both doors. The new latching rod system interlocks with the disconnect handle and eliminates the need to purchase an adaptor. A door interlock is installed to ensure that the left door (slave) can only be opened if the right door (master) is open and the disconnect switch is powered off. Enclosures have 15" floor mounting feet installed. Door and body stiffeners are provided on larger models. **Each enclosure comes complete with a galvanize inner**

panel, which mounts on M10 welded studs. A print pocket is provided. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed
NEMA/EEMAC 12-13 / IP65**

Refer to p.796 to validate choice of substrate for the application

If the 5500 UFD is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
- an operating handle 1494V-H1
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
- if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep

Ordering a Cutler Hammer Disconnect switch catalog C361

- an operating mechanism with the disconnect switch
- an operating handle (C361-H2 or H4)

Circuit breaker operators catalog C371

- a Cutler hammer or Westinghouse circuit breaker
- an operating mechanism
- an operating handle

Ordering a Square D Class 9422 Disconnect switch

- an operating mechanism with the disconnect switch class 9422
- an operating mechanism handle class 9422 Type A-1

Circuit breaker

- a Square D circuit breaker
- an operating mechanism class 9422
- an operating mechanism handle class 9422 Type A-1

Ordering a General Electric Disconnect switch

- a disconnect switch QMR or QMW
- a fuse clip kit if required
- a TDAI flange handle
- an operating mechanism, variable depth

Circuit breakers

- a circuit breaker
- a TDAI flange handle
- an operating handle 1494V-H11
- an operating mechanism, vari-

able depth

Ordering an Asea Brown Boveri Disconnect switch

- a switch flange operated fuse if required

- a DSFHS-12 shaft

- a DSFHN-HS12 handle

Circuit breaker

- a circuit breaker

- an operating mechanism

- a FHS-12 shaft

- a FHN-HS12 handle

Ordering an I-TE Max-Flex™ Disconnect switch

- a basic right hand switch

- a fuse kit if required

- a handle FHOHS flange mounted

- an operator FHOSO6R

- a cable FHOECO36

Circuit breaker

- a circuit breaker

- a set of pressure wire connectors

- a handle FHOH flange mounted

- an operating mechanism

- a standard cable 36"

Ordering a Westinghouse Disconnect switch

- a disconnect switch or circuit breaker type DS

- a yoke assembly and backplate

- a rod and brace assembly

- a pivot mechanism

- an operating handle

Disconnect switches and operating mechanisms are not furnished with the enclosures.

Data subject to change without notice.

Stainless steel right flange mounted disconnect enclosure

The 5500 UFDSS oil and dust tight right flange mounted safety disconnect enclosures are used indoors for protection against dirt, dust, oil and water splashing. The 5500 UFDSS are made of high quality code gauge (type 304) stainless steel with all seams continuously welded. The center post can be removed to facilitate the installation of the inner panel. The ball bearing pins of the concealed die cast hinges can be easily pulled out to remove the doors.

Three point padlockable handles ensure positive closing on both doors. The new latching rod system interlocks with the disconnect handle and eliminates the need to purchase an adaptor. A door interlock is installed to ensure that the left door (slave) can only be opened if the right door (master) is open and the disconnect switch is powered off. Enclosures have 15" floor mounting feet installed. Door and body stiffeners are provided on larger models. **Each enclosure comes**

complete with a galvanize inner panel, which mounts on M10 welded studs. A print pocket is provided. The enclosures' exterior is unpainted and brushed smooth. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed
NEMA/EEMAC 12-13 / IP65**

Refer to p.796 to validate choice of substrate for the application

If the 5500 UFDSS is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
- an operating handle 1494V-H1
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
- if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep

Ordering a Cutler Hammer

Disconnect switch catalog C361

- an operating mechanism with the disconnect switch
- an operating handle (C361-H2 or H4)

Circuit breaker operators catalog C371

- a Cutler hammer or Westinghouse circuit breaker
- an operating mechanism
- an operating handle

Ordering a Square D Class 9422 Disconnect switch

- an operating mechanism with the disconnect switch class 9422
- an operating mechanism handle class 9422 Type A-1

Circuit breaker

- a Square D circuit breaker
- an operating mechanism class 9422
- an operating mechanism handle class 9422 Type A-1

Ordering a General Electric Disconnectswitch

- a disconnect switch QMR or QMW

Double door enclosure for center post mounted disconnect

The 5500 UCD oil and dust tight center post mounted safety disconnect enclosures are used indoors for protection against dirt, dust, oil and water splashing. The 5500 UCD are made of high quality code gauge steel with all seams continuously welded. The center post can be removed to facilitate the installation of the inner panel. The ball bearing pins of the concealed die cast hinges can be easily pulled out to remove the doors. Three point automotive padlockable handles

ensure positive closing on both doors. The new latching rod system interlocks with the disconnect handle and eliminates the need to purchase an adaptor. A door interlock is installed to ensure that the right hand door (slave) can only be opened if the left hand door (master) is open and the disconnect switch is powered off. Enclosures have 15" floor mounting feet installed. Door and body stiffeners are provided on larger models. **Each enclosure comes complete with**

a galvanized inner panel, which mounts on M10 welded studs. A print pocket is provided. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed
NEMA/EEMAC 12-13 / IP65**

Refer to p.796 to validate choice of substrate for the application

If the 5500 UCD is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
- an operating handle 1494V-H1
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
- if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-

RA2 if the enclosure is 12" deep

Ordering a Cutler Hammer Disconnect switch catalog C361

- an operating mechanism with the disconnect switch
- an operating handle (C361-H2 or H4)

Circuit breaker operators catalog C371

- a Cutler hammer or Westinghouse circuit breaker
- an operating mechanism
- an operating handle

Ordering a Square D Class 9422 Disconnect switch

- an operating mechanism with the disconnect switch class 9422
- an operating mechanism handle class 9422 Type A-1

Circuit breaker

- a Square D circuit breaker
- an operating mechanism class 9422
- an operating mechanism handle class 9422 Type A-1

Ordering a General Electric Disconnect switch

- a disconnect switch QMR or QMW
- a fuse clip kit if required
- a TDAI flange handle
- an operating mechanism, variable depth

Circuit breakers

- a circuit breaker
- a TDAI flange handle
- an operating handle 1494V-H11

- an operating mechanism, variable depth

Ordering an Asea Brown Boveri Disconnect switch

- a switch flange operated fuse if required
- a DSFHS-12 shaft
- a DSFHN-HS12 handle

Circuit breaker

- a circuit breaker
- an operating mechanism
- a FHS-12 shaft
- a FHN-HS12 handle

Ordering an I-T-E Max-Flex™ Disconnect switch

- a basic right hand switch
- a fuse kit if required
- a handle FHOHS flange mounted
- an operator FHOSO6R
- a cable FHOECO36

Circuit breaker

- a circuit breaker
- a set of pressure wire connectors
- a handle FHOH flange mounted
- an operating mechanism
- a standard cable 36"

Ordering a Westinghouse Disconnect switch

- a disconnect switch or circuit breaker type DS
- a yoke assembly and backplate
- a rod and brace assembly
- a pivot mechanism
- an operating handle

Disconnect switches and operating mechanisms are not furnished with the enclosures.

Stainless steel center post mounted disconnect enclosures

The 5500 UCDSS oil and dust tight center post mounted safety disconnect enclosures are used indoors for protection against dirt, dust, oil and water splashing. The 5500 UCDSS are made of high quality code gauge (type 304) stainless steel with all seams continuously welded. The center post can be removed to facilitate the installation of the inner panel. The ball bearing pins of the concealed die cast hinges can be easily pulled out to remove the doors. Three point padlockable

handles ensure positive closing on both doors. The new latching rod system interlocks with the disconnect handle and eliminates the need to purchase an adaptor. A door interlock is installed to ensure that the right hand door (slave) can only be opened if the left hand door (master) is open and the disconnect switch is powered off. Enclosures have 15" floor mounting feet installed. Door and body stiffeners are provided on larger models. **Each enclosure comes complete with**

a galvanized inner panel, which mounts on M10 welded studs. A print pocket is provided. The enclosures' exterior is unpainted and brushed smooth. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed
NEMA/EEMAC 12-13 / IP65**

Refer to p.796 to validate choice of substrate for the application

If the 5500 UCDSS is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
- an operating handle 1494V-H1
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
- if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep

Ordering a Cutler Hammer

Disconnect switch catalog C361

- an operating mechanism with the disconnect switch
- an operating handle (C361-H2 or H4)

Circuit breaker operators catalog C371

- a Cutler hammer or Westinghouse circuit breaker
- an operating mechanism
- an operating handle

Ordering a Square D Class 9422 Disconnect switch

- an operating mechanism with the disconnect switch class 9422
- an operating mechanism handle class 9422 Type A-1

Circuit breaker

- a Square D circuit breaker
- an operating mechanism class 9422
- an operating mechanism handle class 9422 Type A-1

Ordering a General Electric Disconnect switch

- a disconnect switch QMR or QMW
- a fuse clip kit if required
- a TDAI flange handle
- an operating mechanism, variable depth

Circuit breakers

- a circuit breaker
- a TDAI flange handle
- an operating handle 1494V-H11
- an operating mechanism, vari-

able depth

Ordering an Asea Brown Boveri Disconnect switch

- a switch flange operated fuse if required
- a DSFHS-12 shaft
- a DSFHN-HS12 handle

Circuit breaker

- a circuit breaker
- an operating mechanism
- a FHS-12 shaft
- a FHN-HS12 handle

Ordering an I-T-E Max-Flex™ Disconnect switch

- a basic right hand switch
- a fuse kit if required
- a handle FHOHS flange mounted
- an operator FHO606R
- a cable FHOECO36

Circuit breaker

- a circuit breaker
- a set of pressure wire connectors
- a handle FHOH flange mounted
- an operating mechanism
- a standard cable 36"

Ordering a Westinghouse Disconnect switch

- a disconnect switch or circuit breaker type DS
- a yoke assembly and backplate
- a rod and brace assembly
- a pivot mechanism
- an operating handle

Disconnect switches and operating mechanisms are not furnished with the enclosures.

Data subject to change without notice.

Right flange mounted disconnect multi-door enclosure

The 9500 UxD oil and dust tight right flange mounted safety disconnect enclosures are used indoors for protection against dirt, dust, oil and water splashing. One, two or three door combinations are available. The 9500 UxD are made from quality code gauge steel with all seams continuously welded. Most center posts can be removed (refer to drawings) to facilitate the installation of the inner panel. The ball bearing pins of the concealed die cast hinges can be easily pulled out to remove the

doors. Three point automotive padlockable handles ensure positive closing on all doors. The new latching rod system interlocks with the disconnect handle and eliminates the need to purchase an adaptor. A door interlock is installed to ensure that the left hand door(s) (slave) can only be opened if the right hand door (master) is open and the disconnect switch is powered off. Door and body stiffeners are provided on larger models. Each enclosure comes complete with a

galvanized inner panel which mount on M10 welded studs. A print pocket is provided. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61smooth gray. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed
NEMA/EEMAC 12-13 / IP65**

Refer to p.796 to validate choice of substrate for the application

If the 9500 UxD is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
- an operating handle 1494V-H1
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
- if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-

RA2 if the enclosure is 12" deep

Stainless steel multi-door disconnect enclosures

The 9500 UxDSS oil and dust tight right flange mounted safety disconnect enclosures are used indoors for protection against dirt, dust, oil and water splashing. One, two or three door combinations are available. The 9500 UxDSS are made of high quality code gauge (type 304) stainless steel with all seams continuously welded. Most center posts can be removed (refer to drawings) to facilitate the installation of the inner panel. The ball bearing pins of the concealed die cast hinges can be

easily pulled out to remove the doors. Three point automotive padlockable handles ensure positive closing on all doors. The new latching rod system interlocks with the disconnect handle and eliminates the need to purchase an adaptor. A door interlock is installed to ensure that the left hand door(s) (slave) can only be opened if the right hand door (master) is open and the disconnect switch is powered off. Door and body stiffeners are provided on larger models.

Each enclosure comes complete with a galvanized inner panel(s), which mount on M10 welded studs. A print pocket is provided. The enclosures' exterior is unpainted and brushed smooth. The enclosures' interior is finished with heat fused powder paint, electrostatically applied on a pre-treated base. Inner panel is galvanized (other colors available).

CSA Certified / UL Listed
NEMA/EEMAC 12-13 / IP65
Refer to p.796 to validate choice of substrate for the application

If the 9500 UxDSS is to be used with a flange mounted disconnect switch or a circuit breaker, the following items must be ordered:

Ordering an Allen-Bradley 1494V Disconnect switch

- an operating mechanism with the disconnect switch 1494V
- an operating handle 1494V-H1
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2 if the enclosure is 12" deep
- if required, a trailer fuse block kit 1494V, a fuse clip and line and load connectors.

Circuit breaker

- a Westinghouse or General Electric circuit breaker.
- an operating mechanism 1494V
- an operating handle 1494V-H11
- a connecting rod 1494V-RA1 if the enclosure is 8" deep or 1494V-RA2

if the enclosure is 12" deep

Ordering a Cutler Hammer

Disconnect switch catalog C361

- an operating mechanism with the disconnect switch
- an operating handle (C361-H2 or H4)

Circuit breaker operators catalog C371

- a Cutler hammer or Westinghouse circuit breaker
- an operating mechanism
- an operating handle

Ordering a Square D Class 9422 Disconnect switch

- an operating mechanism with the disconnect switch class 9422
- an operating mechanism handle class 9422 Type A-1

Circuit breaker

- a Square D circuit breaker
- an operating mechanism class 9422
- an operating mechanism handle class 9422 Type A-1

Ordering a General Electric Disconnect switch

- a disconnect switch QMR or QMW
- a fuse clip kit if required
- a TDAI flange handle
- an operating mechanism, variable depth

Circuit breakers

- a circuit breaker
- a TDAI flange handle
- an operating handle 1494V-H11

- an operating mechanism, variable depth

Ordering an Asea Brown Boveri Disconnect switch

- a switch flange operated fuse if required
- a DSFHS-12 shaft
- a DSFHN-HS12 handle

Circuit breaker

- a circuit breaker
- an operating mechanism
- a FHS-12 shaft
- a FHN-HS12 handle

Ordering an I-TE Max-Flex™ Disconnect switch

- a basic right hand switch
- a fuse kit if required
- a handle FHOHS flange mounted
- an operator FHOSO6R
- a cable FHOECO36

Circuit breaker

- a circuit breaker
- a set of pressure wire connectors
- a handle FHOH flange mounted
- an operating mechanism
- a standard cable 36"

Ordering a Westinghouse Disconnect switch

- a disconnect switch or circuit breaker type DS
- a yoke assembly and backplate
- a rod and brace assembly
- a pivot mechanism
- an operating handle

Disconnect switches and operating mechanisms are not furnished with the enclosures.

Data subject to change without notice.

SAFETY DISCONNECT INTERLOCK KIT

Interlock kit for multi-door enclosures

The **880 INTM** interlock kits are used to interlock slave doors with the master door. The slave doors can only be opened when the master door is opened first. The master door can be any door of the cabinet arrangement.

The doors can be closed in any order. The kit comes complete with all mounting hardware and is ready to be installed. The 880 INTM is used with EXM MD3, UFD, U2D, U3D, DDS and SSDD multi-door enclosures.

This interlock kit was designed and is produced exclusively by EXM.

For ordering and installation instructions, please contact EXM at 1-800-363-2423.

NEMA 4-12 PUSHBUTTONS

Oil & dust tight standard pushbutton enclosures

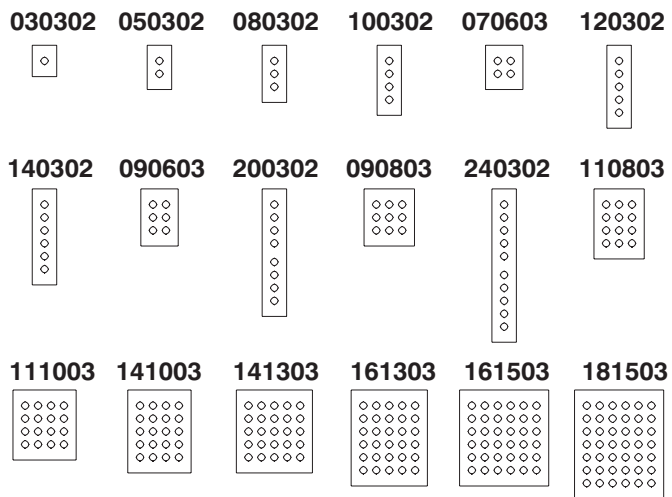

The 1412 SD - 1412 ED - 1412 EL - 1412 MN - 1412 SF - oil and dust tight pushbutton enclosures are built to provide protection against dirt, dust and oil, for all brands of oil tight pushbuttons, switches and pilot lights. There are 6 types of enclosures, which are listed on the following pages. The 1412 series enclosures are made of high quality 16 GA steel, with all seams continuously welded. A high quality, seamless gasket, which is

poured in place, ensures a complete and durable seal of the enclosure. Cover screws thread into sealed wells and are captive. The enclosure can be internally or externally mounted using the included die cast wall mounting feet. These feet have oblong holes to facilitate installation. Hole plugs (880 HP series) are available to seal unused holes. The 1412 SD, 1412 ED and 1412 SF are also available with blank covers.

The 1412 EL enclosures come with a galvanized interior panel. Enclosures are finished with heat fused powder paint, electrostatically applied on a pre-treated base. Boxes are ANSI/ASA 61 smooth gray. Inner panel is galvanized (other colors available).

Standard stainless steel pushbutton enclosures

The 1412 SDSS oil and dust tight pushbutton enclosures are built to provide protection against corrosion, dirt, dust and oil, for all brands of oil tight pushbuttons, switches and pilot lights. The 1412 SDSS are made of high quality 16 GA (type 304) stainless steel, with all seams continuously welded. A high quality, seamless gasket, which is poured in place, ensures a complete and durable

seal of the enclosure. Cover screws thread into sealed wells and are captive. The enclosure can be internally or externally mounted using the included die cast wall mounting feet. These feet have oblong holes to facilitate installation. Hole plugs (880 HP series) are available to seal unused holes. The 1412 SDSS is available with standard and miniature pushbutton holes.

The enclosures' exterior are unpainted and brushed smooth. The enclosures' interior is finished with white heat fused powder paint, electrostatically applied on a pre-treated base.

NEMA 12-13 PC CABINETS & CONSOLETS

NEMA 12-13 CONSOLETS

1500 PE/PEA/BA

Oil & dust tight straight pedestals, angled pedestals & bases

The 1500 PE straight pedestals, 1500 PEA angled pedestals and 1500 BA bases are used to floor mount 1500 CS/CSD/CSE consolets or other types of enclosures. Wiring can be pulled through the base or the pedestal column (a cutout must be made on the consolet). Wires can also be pulled directly into the consolet. Inside

flanges and sealing gaskets are provided. A high quality, seamless gasket, which is poured in place, secures the access cover and the box connector. The pedestals are made of 14 GA steel and the base is made of 11 GA steel with reinforcements. Leveling screws and holes to bolt the components to the floor are provided. Pedestals

and bases are finished with heat fused powder paint, electrostatically applied on a pretreated base. Finish is ANSI/ASA 61 smooth gray.

Oil and dust tight consolets - 35°

The 1412 CSD (35° control surface) oil and dust tight consolets with cable entry are used indoors to protect electrical equipment against dirt, dust, oil and water splashing. The 1412 CSD consolets are provided with mounting holes for the pedestals (1412 PE060635 or 1412 PEA060641, see page 422). On larger consolets a stabilizing plate is provided to solidify the assembly of the pedestal. Consolets are made of 16 GA steel with all seams contin-

uously welded. The consolets feature die cast hinges, which are bound to the cover by an exclusive, concealed hinge pin system. The covers are inter-changeable and can be removed by unfastening the anti-vibration lock nuts. Covers are secured with EXM's exclusive flange-mounted ¼ turn locks which ensure positive closing. (Padlockable locks and key locks are available.) A high quality, seamless gasket, which is poured in place, is used to ensure

the integrity of the enclosure. Pedestals and bases, if required, must be ordered separately. Consolets are finished with ANSI/ASA 61 smooth gray heat fused powder paint, electrostatically applied on a pretreated base (other colors available).

Water, oil & dust tight consolet enclosures

The 5412 ESCS water, oil & dust tight enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or to water coming from any direction or for protection against dust, dirt or oil splashing.

The 5412 ESCS have a sloped control surface above the door. They are made of high quality 14 GA or 16 GA steel, with continuously welded corner seams. The opening has a curled lip around all sides to increase rigidity and pre-

vent dripping water from entering the enclosure when the door is open. A high quality, robotically poured-in-place, seamless gasket ensures a complete and durable water tight seal. The pins of the concealed hinges can be pulled out to remove the door.

A ¼ turn locking mechanism (or 3 point latch system on larger enclosures) ensures positive closing. Internal mounting holes are provided. Each enclosure comes complete with a 12 GA galva-

nized inner panel, which is double bent* for maximum rigidity and mounts on M8 welded studs. Enclosures are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box is ANSI/ASA 61smooth gray. Inner panel is galvanized (other colors available).

**CSA Certified / UL Listed

Oil & dust tight PC cabinet

The 2500 CA series oil and dust tight consoles are used to protect computers against oil and dust. These cabinets are made of 14 GA steel or from 14 GA (Type 304) stainless steel. The opening has a curled lip around all sides to increase rigidity and ensure complete contact against the high quality, poured seamless gasket. The door comes complete with a

1/4" lexan window. An interior screen shelf is provided. A rear door is provided to access the back of the computer. Cut-outs for filter fans are provided on each side of the console. The 2500 CAF includes a fixed keyboard shelf and the 2500 CAM includes a movable keyboard shelf with a sliding mouse pad. The consoles are finished with heat fused pow-

der paint, electrostatically applied on a pretreated base or in type #4 stainless steel finish. Box and shelf are RAL 7011 (sandtex dark gray), doors and plates are RAL 7035 (textured light gray).

Oil & dust tight PC cabinet with air conditioning

The 2500 IQ oil and dust tight consoles are used to protect computers against oil and dust. These cabinets are made of 14 GA steel. The opening has a curled lip around all sides to increase rigidity and to ensure complete contact against the high quality, poured seamless gasket. The door comes complete with a 1/4" lexan window. An interior screen shelf is pro-

vided. A back plate is provided to access the back of the computer. Cut-outs for filter fans are provided on each side of the console. The 2500 IQ includes a movable keyboard shelf with a sliding mouse pad. The lower part of the cabinet is also equipped with a sliding printer shelf. A top mount, closed loop air conditioner is installed and is available in strengths of 2500 and 4000 BTU.

The consoles are finished with heat fused powder paint, electrostatically applied on a pretreated base. Box and shelf are RAL 7011 sandtex dark gray, doors and plates are RAL 7035 textured light gray.

HYGIENIC LOCKS AND CABINET HANDLES

Hygienic locking mechanism, stainless steel

The **hygienic series of locks** are intended to be used in areas where washdown are frequently processed. Their design allows for water to run off completely, preventing any bacterial contamination. Furthermore, the blue sealing gaskets meets FDA requirements. The high quality stainless steel ensures a proper corrosion protection.

Cabinet handles

The **880 APH** Padlockable handle was designed to fit most type 4-12 or 4X-12 enclosures. The handle is available with a key insert, spring loaded defeater, requiring a tool in order to operate the mechanism for disconnect requirements, or no insert at all. Finish is zinc plated brushed stainless steel.

CATALOG NUMBER	DESCRIPTION	SHIP WGHT LBS.
880 APH-KSS	Key lock	2
880 APH-DSS	Slotted defeater	2
880 APH-NSS	No key	2
800 APH-K	Zinc/key lock	2

Note : Handle is designed to accommodate 1/4" and 5/16" padlocks.

Double door internal handle

The **880 HDD** double door internal handles are designed to secure the flange door double door cabinets. This 2 point locking mechanism prevents the flange door from opening inadvertently when the locking door is open. The handle is made from zinc plated, formed 12 gauge steel and installs inside the flange door with latching rods (ordered separately, page 513).

Did you know?

EXM ESCH style enclosures feature exclusive flange-mounted quarter-turn locks. These locks are positioned to maximize the available instrument mounting surface on the door.

Data subject to change without notice.

REPLACEMENT DOORS

Replacement doors for ES enclosures

The **CE Series** replacement doors were designed to fit our ES style enclosures.

The **881 CE** are ANSI/ASA 61 gray and fit 5100 ES boxes.

The **883 CE** are ANSI/ASA 61 gray and fit 5300 ES boxes.

The **885 CE** are ANSI/ASA 61 gray and fit 5412 ES and 5412 ESFM boxes.

The **885 CESS** are brushed stain-

less steel and fit 5412 ESS boxes.

The **885 CHDAL** are aluminum and fit 5412 EAL boxes.

The **886 CE** are RAL7035 light gray and fit 6412 ES enclosures.

INNER PANELS

JIC Inner panels - Series 880 SP

The 880 SP Series replacement inner panels were designed to fit our ESCH, ESFR, ESSC and ESLC (see below for details) lines of enclosures. These lines come

complete with an inner panel, therefore an 880 SP is only ordered when a replacement or spare panel is required. The 880 SP are made of white, powder

coated, 14 GA steel. They are built in compliance with JIC standards and can be interchanged with most JIC inner panels from competing lines.

For perforated panels, add suffix 'P' to the catalog number. (i.e. 880 SP1008P)

See perforation pattern below.

To order inner panels with specific material, add appropriate suffix to the catalog number.

* For Aluminum :

Add suffix 'AL' to the catalog number (ie. 880 SP1008AL).

* For Galvanized Steel :

Add suffix 'G' to the catalog number (ie. 880 SP1008G).

Note : For custom sizes and colors, please contact EXM.

* For Stainless Steel:

Add suffix "SS" to the catalog number (ie. 880 SP1008S)

The 880 SP inner panels are to be used with these enclosure lines, amongst others :

† For 14"x12" fiberglass enclosures, please order part number #880 SP1412FR.

Data subject to change without notice.

INNER PANELS

'ES' Inner panels - Series 881 SP

The 881 SP Series replacement inner panels were designed to fit our ES and ESDD (see below for details) lines of enclosures.

These lines come complete with an inner panel, therefore an 881 SP is only ordered when a replacement or spare panel is

required. The 881 SP are made of white powder coated 12 GA steel. Perforated panels are also available.

INNER PANELS

1100 and 1100 CIP Inner panels

The **882 SP Series** replacement inner panels are designed to fit our 1100, 1100 W and 1100 CIP enclosures. They are also interchangeable with the ES and ESDD family of products. Panels

with the A or B dimension equal to 22" or bigger have been double bent for greater rigidity. Made of 14 GA steel and finished with white, heat fused powder paint, electrostatically applied on a pre-

treated base.

Panels are also available in **galvanized steel or aluminum**. **Contact EXM for details**
Refer to p.796 to validate choice of substrate for the application

PANELS, SUPPORT, SUN SHIELD, RELAY RACKS

Inner panels for metering or current cabinets

The **881 MCP Series** replacement inner panels are designed to fit our 1100 MC and 5300 MC enclosures. Panels with the A or B dimension equal to 22" or bigger

have been double bent for greater rigidity. Made of 14 GA galvanized steel.

Add suffix 'W' for a white finish with heat fused powder paint,

electrostatically applied on a pre-treated base.

Refer to p.796 to validate choice of substrate for the application

HARDWARE, GASKET

Hardware kits

The **880 K** hardware kits are used when additional parts are required to replace the hardware which was supplied with the enclosures.

These kits can be used in case of the loss of original kits or when the existing enclosures must be re-worked or upgraded, or for any other purpose.

Most hardware kits include anti-vibration screws, nuts and bolts. This helps to ensure installation integrity, even in mobile applications.

GLAND PLATES & WINDOW KITS

Flush, instrument mount gland plate

The 880 GPF and the 880 GPR are designed to be used as instrument mounting plates or cable entry plates. The instrument mounting plates (880 GPF and 880 GPR) permit standardization of the enclosures. Users can have the same enclosure with the same cut-out for the instrument plate. When different instrument cut-outs are required, the user can pierce the instrument plate or order them precut from the factory, thus avoiding manipulation of the complete enclosure, which can cause damage and is more

time consuming. The instrument panels can be used in conjunction with the NEMA 4 window kits (880 HWK, 880 HWKV, 880 HWKL, 880 HWKO, 880 HWKOB, 880 HWKOL), when the installation requires NEMA 4 protection but the instruments are not rated for NEMA 4. If the need is to install instruments that are deep, the recessed instrument plate available at 2" or 4" deep can be used. The extra deep window kit (880 HWKL) offers extra space for protruding knobs or pushbuttons. Plates are made of 16 GA steel

(also available in stainless steel) and are supplied with the required mounting hardware. Plates are finished with ANSI/ASA 61 gray heat fused powder paint, electrostatically applied on a pre-treated base. (other colors available).

**C.S.A. certified / UL Listed

ELECTRONIC ENCLOSURES

IP67 die-cast aluminum boxes with dual conductive and continuous silicon gasket

- Material: aluminum alloy ADC-12 to Japan (JIS)
- Wall mounting holes and fixing screws are located outside of the sealing area for optimal protection
- M4 countersunk stainless screws are included for securing the cover and the body
- Continuous silicon gasket to meet IP67 rating of protection against water and dust
- Conductive gasket for perfect EMI shielding protection.
- Die-cast mounting bracket (ALMF-001) available. ALMF-001 can be used for wall mounting both the HQ0XX and G1XX series of aluminum enclosures

* Light gray (LG), black (BK) powder coated aluminum enclosures as well as mounting brackets are available. To do so add the colour code at the end of the catalog number.

Ex: HQ001LG , HQ003BK , HQ005LG ,HQ007BK , ALMF-001LG

ELECTRONIC ENCLOSURES G5XX Type B Series

Hand-held electronic enclosures

- Material: High-impact UL94-HB ABS.
- Available in light gray and black
- Ideally suited for housing remote controls, medical devices, scientific instruments and communications equipment
- Recessed area in the top lid is ideally suited for membrane keypad use
- G517 and G528 models feature a battery compartment which is designed to accommodate two "AAA" batteries. The "GSN-42-1PP" - 2X battery holder with 150mm wires can be ordered optionally
- G519, G529 & G537 come complete with a battery compartment and are designed to accept either one "9V" or two "AA" batteries. "GSN-32-2P" is a compartment for 2 X "AA" batteries with 150mm of wire
- Flush panels (IR Panel - "\$ " ; "@ " ; "% " ; "& ") are available
- "G900B clip " - black belt clip or "G900G clip " - gray belt clip is also an optional item for G512 , G515 , G517 , G519 , G521 , G526 , G528 , G529 , G537 & G539 .

- Moulded dark gray rubber sides for durability and grip
- Designed to accept either two or four "AAA" batteries
- "G900B clip "- black belt clip and "G900G clip"- gray belt clips are available
- "G939TP"- red transparent panel is available as an option
- Recessed display are: 78 x 52 mm.

Snap in plastic cases

- Material: high-impact UL 94-HB ABS
- Lid and base are moulded in light gray, front and end panels are moulded in dark gray
- Snap-in design to save time during product assembly
- 4 internal bosses are available for PCB assembly
- Ideally suited for desktop instrumentation, network and telecommunication devices
- Rubber feet < RF-1001 > for G1812 ,G1814 &G1816 are available
- Rubber feet < RF-6002 > for G1818 are available

Utility & USB boxes

- Material: polycarbonate (transparent) for G1901C
- Material: high-impact ANBS (UL94-HB) for G1901G and G1905
- Material: flame retardant ABS (UL94-V0) for G1903, G1906, G1908 & G1910
- G1901G (or G1901C) is ideal for USB memory cards or wireless devices
- G1905 - Utility box with external mounting bracket
- G1903, G1906, G1908 & G1910 are ideal for electronic products

Snap-in plastic box with hinged cover

- Material: high impact UL94-HD ABS
- Available in light gray and black
- Snap-in design allows easy opening and closing without the use of tools
- Rubber cable entries can be easily cut to allow connections
- Internal bosses are available for PCB assembly
- Ideally used for indoor/outdoor telecommunication devices

CATALOG NUMBER	CABLE ENTRY	EXTERNAL DIMENSION (mm)

Die-cast aluminum enclosures

- Material: aluminum alloy ADC-12
- Finish: natural aluminum color
- Tapped holes in the cover to easily secure the cover
- M3.5 countersink stainless screws are included to secure the cover and the body
- IP66 rating available when using the optional adhesive gasket

Light gray (LG) and black (BK) powder coated aluminum enclosures are available. To do so add the color code after the catalog number when ordering

Ex: B011MFLG , B013BK , BS11LG , BS13BK

Multi-purpose, RFI/EMI shielded die-cast aluminum boxes

- Aluminum die-cast boxes moulded to 380 aluminum alloy (BS1490 LM24)
- Ideal for RF projects or for projects which are subject to harsh weather conditions
- Robust, light-weight and easy to machine
- Ideal for projects involving heat as the case itself makes an excellent heatsink

APPLICATIONS

- INSTRUMENTATION
- METER CASES
- FILTER NETWORKS
- JUNCTION BOXES

Data subject to change without notice.

Sealed polycarbonate and ABS enclosures

Material: polycarbonate
Color: Light Gray
Operating temperature: -40° to 120°
Clear lid available upon request

Material: high impact ABS
Color: Dark Gray
Operating temperature: -20 to 80

- The lid and base incorporate a tongue and groove sealing system with a neoprene gasket
- Wall mounting holes and lid fixing screws are located outside of the sealing area to prevent the ingress of moisture and dust
- Designed to meet IP65 and NEMA 4 standards
- Available with clear or light gray lids
- Internal guide slots enable vertically mounted PCB assemblies
- Bosses on the internal base enable the fixing of PCBs horizontally or the connection of terminals into the threaded brass inserts

Data subject to
change without
notice.

Lid fixing screw are M4 stainless steel (non-magnetic) into threaded brass inserts

Plastic molded enclosures

- Ideally suited for instrumentation and telecommunication equipment ranging from hand-held to desktop sizes
- Molded in high impact ABS which is flame retardant
- These molded plastic cases have a two part design; a tongue and groove joint between the top and bottom case, with specially designed end panels of the same material. Optional aluminum panels are available as well
- IP54 of IEC 529
- The top and bottom case are lightly textured which provides a non-scratch surface and maintains the high quality finish
- Guide slots are provided for the vertical mounting of PCBs
- Bosses are provided for the horizontal mounting of PCBs
- Four M3 screws are countersunk in the base and threaded into brass inserts, which firmly secure the lid and end panels

Medium size hand-held plastic T-cases

These new cases are ideal for test and measurement, data-loggers and other handheld instruments

- Robust and ergonomic high impact ABS cases
- Two colors are available in black and light gray
- Top and bottom parts incorporate a tongue and groove sealing system in order to achieve an ip65 rating. The gasket is available as a separate item.
- Available with a rear battery compartment which accepts a 9v 216 type or two AA batteries
- Removable tile stand, the enclosure can also be wall-mounted
- Available with open display window or solid front
- Case is held together by 4x3 screws which are supplied
- Recessed display area : 87.3 x 66.5mm
- Recessed keyboard area : 105.4 x 62.7mm
- Cutout area : 72.2 x 51.5mm

ELECTRONIC ENCLOSURES G8XX Type B Series

Hand-held plastic T-cases

Ideal for handheld instruments, they are available in either light gray or black and a tilting bail is supplied.

FEATURES:

- Available with a solid display area or a cutout
- The top and bottom parts incorporate a tongue and groove sealing system which accommodates a gasket. The gasket is available as a separate item
- Available with a rear battery compartment which accepts a 9v 216 type or two AA batteries
- A durable and professional moulded tilting bail is available which also can be used for wall-mounting applications
- Available in black and light gray as standard. Customer color selection is available on indent
- Case is held together by 6 brass inserts in the lid and M3 screws
- Moulded in high-impact ABS
- Recessed display area : 116 x 81mm
- Recessed keyboard area : 118 x 81mm
- Cutout area : 101 x 45mm

ENVIRONMENT CONTROL

LIGHTS & LIGHTING ACCESSORIES

Enclosure lights - Series 880 LED

The **880 LED** are designed to illuminate the interiors of small to large enclosures with very low power consumption, due to the LED lights. The light bars are motion activated using the built-in motion sensor, eliminating the need for a door switch. The time the LED lights stay on, without

movement, is adjustable at 3, 5 or 10 minutes. The light bars are made from extruded aluminum and feature an integrated 120/240 Volts, 11.5 Amps USA/Canada standard receptacle, so that electrical devices (e.g. power tools) can be easily plugged in when needed. A 5 foot cord with an

USA/Canada 120/240 Volts plug is provided. The LED bars come complete with a set of 2 mounting brackets (880 LEDB) that are easily clipped along the length of the LED bar, and can be fixed to the enclosure with the included M5 screws or optional right angle mounting bracket.

LIGHTS & LIGHTING ACCESSORIES

Enclosure lights - Series 880 FLPW

The **880 FLPW** fluorescent light packages are designed to illuminate the interiors of small to large enclosures. They are provided with an on/off switch, a 115 V power outlet and an 8 foot cord without a plug. They are powered

by 120V voltage. The lighting packages mount on 1/4-20 bolts and are available in lengths of 18", 24", 36" and 48". The 880 FLPW can also be mounted using the optionally available magnet kit (880 FLM). A remote door switch

(88x FLRDS) can also be ordered separately to turn the light on and off as the door is opened and closed. Please note that the fluorescent light bulb is not included and must be ordered separately.

LIGHTS & LIGHTING ACCESSORIES

Remote door switch - Series FLRDS

The **FLRDS series remote door switch** can be applied in the ES family (881 FLRDS), in the Mtrx family (886 FLRDS), in the 5412 DDS cabinet and the 9000 series

cabinets (889 FLRDS). It is a cost effective solution to power on/off the light within an enclosure. The bracket is designed to operate on all Mtrx doors and side doors, with

or without stiffeners. Consists of switch, steel bracket and hardware.

For use with 'ES' series enclosures:

LIGHTS & LIGHTING ACCESSORIES

Slimline Light

- **Compact design**
- **Electronic ballast**
- **Optional integrated receptacle**
- **Screw or magnet mount**
- **Long-life energy saving lamp**
- **On/off switch or motion sensor**

The SL 025 light was designed to fit in tight spaces in enclosures. It features an optional integrated receptacle so that electrical devices (e.g. power tools) can be easily plugged in when needed. The standard light can be screw mounted in a variety of positions, or the light can be fitted with an available magnet mount. The motion sensor version was designed to eliminate the need for a door switch.

Technical Data

Power consumption	11W (~ 75W incandescent bulb)
Luminosity	900Lm
Lamp type	compact fluorescent, 2G7 base, electronic ballast
Service life	10,000 hrs.
Switch (for light only)	on/off switch or PIR motion sensor ¹⁾
Connection	3-pole terminal AWG 16 max. (1.5mm ²) with strain relief only (cable not included), clamping torque 0.8Nm max.
Housing	plastic, UL 94V-0, light grey
Mounting	M5 screws (not included), 11.8" (300mm) hole distance or optional attached magnet (see part nos. below)
Operating temperature	-4 to +122°F (-20 to +50°C)
Storage temperature	-49 to +158°F (-45 to +70°C)
Dimensions	13.6 x 3.6 x 1.6" (345 x 91 x 40mm)
Weight	approx. 0.9 lbs. (400g), 1.3 lbs (600g) with magnet
Protection type	IP20
Note	24VDC to 48VDC available upon request

¹⁾ The Passive Infrared (PIR) motion sensor detects the motion of the enclosure door being opened and automatically turns on the light. The sensor is factory pre-set to turn the light off 6 minutes after all motion ceases. The motion sensor does not detect movement through glass, allowing for installation in enclosures with glass doors.

FILTER FANS

Small metal filter fan - 200mm - 178m³/h

Quick Features :

- Housing made of steel or stainless steel
- The steel fans are painted black (custom colors available)
- The stainless steel fans are brushed
- The kits include the filter fan and the exhaust filter
- For use in environments where humidity is not a concern
- Permanently lubricated, ball bearing axial fan
- Electrostatically charged polypropylene filter traps particles as small as 10 microns
- Electric connection via a power cord (included)

Technical Data :

Dimensions (H x W x D) : 200mm X 200mm X 51mm (imperial sizes on drawing)
 Max. operating temperature : 80°C
 Free blowing air volume : 178m³/h
 Protection degree : NEMA 1

This filter fan may be used as a replacement for the discontinued KP40 (fan filter) / KFG40 (exhaust filter). However, the fan's dimensions and output differs from the KP40 / KFG40.

Data subject to change without notice.

VENTILATING

19" Fan Tray 286 - 1017 cfm

- High air volume
- Long service life
- Ball bearing fans
- Ready for connection
- Optical function indicator

The LE 019 is a compact high performance fan tray for forced circulation of air in enclosures and for cooling of 19" rack mount applications. Natural convection is improved and the formation of localised hot pockets is prevented. Also available with integrated thermostat (see photo).

Technical Data

Axial fans, ball bearing	service life 50,000h at 25°C (65% RH) fan body aluminium, rotor plastic
Material	front panel aluminium, bright anodised casing steel sheet, electrogalvanized
Optical indicator	integrated in front panel
Connection	power inlet on rear of casing, plug included (no cable)
Mounting position	vertical airflow (air outlet up)
Operating / Storage temperature	-10 to +60 °C / -40 to +70 °C
Operating / Storage temperature	max. 90% RH (non-condensing)
Protection type / Protection class	IP20 / I (grounded)

Use in 19" enclosures: We recommend using the fan tray without integrated thermostat in combination with our dual thermostat (ZR 011 Art. No. 01176.0-00) for regulating temperature in electronic enclosures and for protection against over-heating due to possible fan failure.

The dual thermostat regulates the operation of the fan tray and - when connected to a signal device - also triggers an early warning if the enclosure interior temperature rises above a set limit. When using a fan tray with integrated thermostat, the use of an additional thermostat (KTS 011 Art. No. 01141.0-00) provides the extra safety of activating a signal device.

FILTER FANS

Washdown filter fan system (NEMA 4/4X)

Quick Features :

- Housing made of steel or stainless steel
- The steel fans are painted gray (custom colors available)
- The stainless steel fans are brushed
- The kits include the filter fan and the exhaust module
- For use in harsh environments, where the filter fan system may be subject to washdowns or for severe outdoor applications
- Electrostatically charged polypropylene filter traps particles as small as 10 microns
- Electric connection via a power cord (included)
- UL, cUL

Technical Data :

Dimensions (H x W x D) : 457mm X 267mm X 127mm (imperial sizes on drawing)
 Max. operating temperature : 55°C
 Protection degree : NEMA 4 (steel units) / NEMA 4X (stainless steel units)

In order to ensure the system's integrity the supplied gasket must be properly installed, as shown below. This filter fan system should be used exclusively with NEMA 4 or NEMA 4X cabinets.

VENTILATING

Filter Fan 14 - 69 cfm

Enclosure ventilation using a filter fan and exhaust filter

- **Very low noise**
- **Minimal mounting depth**
- **Functional design**
- **Time-saving installation**
- **UV resistant plastic**

Filter fans are used to provide an optimum climate in enclosures. The interior temperature of an enclosure can be reduced by channelling cooler filtered outside air into the enclosure thus expelling heated internal air. The resulting air flow prevents formation of localized heat pockets and protects the electronic components from overheating. The plastic used for this filter fan series is impact and UV light resistant. These filter fans are intended for indoor use.

Technical Data

Axial fan, ball bearing	service life min. 50,000h at 77°F (25°C) and 65% RH aluminum fan body, plastic rotor
Connection	2 wires w/ cage clamps, AWG 14 (2.5mm ²), length 4" (100mm)
Housing (filter fan and exhaust filter)	Plastic, UL 94V-0, light grey
Hood (filter fan and exhaust filter)	Plastic, UL 94V-0, light grey; UV light resistant according to UL 746C (f1)
Mounting frame	with double-sided industrial adhesive for mounting to the outside of enclosure; certain operating circumstances may make the additional use of screws necessary; cut-out template included
Filter media rating	G4 acc. to DIN EN 779, filtering degree 94%
Filter material	synthetic fiber with progressive construction, temperature resistant to 212°F, self-extinguishing class F1; moisture resistant to 100% RH, reusable - can be cleaned by washing or vacuuming
Operating / Storage temperature	14 to 158 °F (-10 to +70°C) / -40 to 158 °F (-40 to +70°C)
Operating / Storage humidity	max. 90% RH (non-condensing)
Protection class / Protection type	I (grounded) / IP55 (according to VDE), UL Type 12
Approvals	UL File No. E234324 (all), GOST TR (all), VDE (AC 230 V only)

Special features

- The **self-adhesive seal** of the mounting frame prevents dust and water from entering the cabinet.
- **Functional design** of the intake and exhaust fan hoods very effectively prevents direct infiltration of falling water and dust. The advantage is that the filter mat does not rapidly become contaminated with dirt and therefore does not need to be exchanged as often.
- The **air channelling** makes the filter fan particularly quiet in operation.
- All filter fan models are also available with **integrated airflow monitor**.
- The **direction of air flow can easily be switched** by reversing the axial fan.
- EMC versions and other voltages are available upon request.

VENTILATING

Filter Fan 14 - 69 cfm

Installation sketch

Time-saving assembly and maintenance

EXM's filter fans are easily installed by one person **from outside** the cabinet.

- 1.) Make cut-out in the cabinet wall. The cut edge of the cabinet opening should be free of dirt, filings and grease. A template for the enclosure cut-out is included with the filter fan.
- 2.) Remove protective film from the sealing strips on the mounting frame. Press mounting frame into the cabinet opening. The frame stays permanently in the cabinet.
- 3.) Electrically connect the axial fan using the cage clamp connectors. Push the unit into the mounting frame. Affix using screws if necessary.
- 4.) Insert the filter mat in the hood. Clip on. Finished.

Dimensional Drawing

To change the filter mat, simply remove the filter hood, insert the new mat and snap the hood back again. No tools are required. Maintenance of the fan can easily be performed without removing the mounting frame (2).

Exhaust filter

- Minimal mounting depth
- High air volume
- Functional design
- Time-saving installation
- UV resistant plastic

Filter fans are used to provide an optimum climate in enclosures. The interior temperature of an enclosure can be reduced by channeling cooler filtered outside air into the enclosure thus expelling heated internal air. The resulting air flow prevents formation of localized heat pockets and protects the electronic components from overheating. **Four integrated axial fans** provide a particularly high and uniform air circulation which contributes to higher reliability. The plastic used for the hood of this filter fan series is UV light resistant. These filter fans are intended for indoor use.

Technical Data

Axial fan, ball bearing	service life min. 50,000h at 77°F (25°C) and 65% RH aluminum fan body, plastic rotor

VENTILATING

Outdoor Filter Fan 14 cfm

- **Quick and easy filter change**
- **Lockable outer door**
- **Impact resistant**
- **Weather proof and UV resistant**

This filter fan can be used in outdoor enclosures where warm air has to be dissipated. To clean and exchange the filter mat, it is only necessary to open the lockable door of the outdoor hood eliminating the need to allow interior access to the enclosure. A protection type of IP55 is achieved due to the special design of the hood and the use of fine filter mats. The plastic used for the hood of this filter is highly weather and UV light resistant.

Technical Data

Axial fan, ball bearing	service life min. 50,000h at 77°F (25°C) and 65% RH aluminum fan body, plastic rotor
Connection (2 wires w/ cage clamps)	AWG 14 (2.5mm ²), length 4" (100mm)
Filter fan and exhaust filter housing	plastic according to UL 94v-0, light grey; weather and UV light resistant according to UL 746C (f1)
Mounting frame	with double-sided industrial adhesive for mounting to the outside of enclosure; certain operating circumstances may make the additional use of screws necessary; cut-out template included
Filter media rating	F5 acc. to DIN EN 779, filtering degree 98%
Filter material	synthetic fiber with progressive construction, temperature resistant to 212°F, self-extinguishing class F1; moisture resistant to 100% RH
Operating / Storage temperature	14 to 158 °F (-10 to 70°C) / -40 to 158°F (-40 to 70°C)
Operating / Storage humidity	max. 90% RH (non-condensing)
Protection class / Protection type	I (grounded) / IP55
Approvals	UL File No. E234324, VDE, GOST TR

Note: The hood is attached permanently to the enclosure from the inside using provided screws. Filter mats can be easily changed from outside the enclosure through the lockable door in the hood.

PRESSURE CONTROL

Breather drain

UL Type 1

Easy to install

Breather drains prevent humidity accumulations in enclosures. Drains are to be used when an enclosure is subject to differences in temperature as a result of the heat generated by electrical and electronic components in the enclosure, as well as the fluctuation of the outside temperature.

The 880 BD1 breather drain device allows air and humidity to leave the enclosure.

Technical Data

Mounting	thread M8 x 1.25 with nut
Depth in enclosure	approx. 0.43" (11mm)
Material	nylon, PA6, light grey
Operating/storage temperature	-49 to +158°F (-45 to 70°C)
Protection type	see below
Environmental rating	Type 1

Part No.	Model	1 packing unit	Weight (approx.)
880 BD1	M8 x 1.25	2 pieces	0.14 oz. (4g) total

PRESSURE CONTROL

Stainless Steel Pressure Compensation Device

- High degree of protection
- Waterproof membrane
- Corrosion resistant
- Easy to install

Pressure differentials in a hermetically sealed enclosure are a result of the heat generated by electrical and electronic components in the enclosure, as well as the fluctuation of the outside temperature. In the case of negative pressure or vacuum, for example, dust and humidity can enter the enclosure through the door seal.

The DA 284S **Stainless Steel** Pressure Compensation Device provides a protected enclosure environment for valuable and crucial components with an **IP66** rated degree of protection. A waterproof membrane inside the device allows air and humidity to leave the enclosure while not allowing moisture and dust from the outside to enter.

Technical Data

Mounting	thread with nut
Torque	5 Nm (max. 10 Nm)
Material	stainless steel V2A (DIN 1.4305 / AISI 303)
Sealing	NBR gasket
Filter	waterproof membrane
Operating/storage temperature	-49 to +176°F (-45 to 80°C)
Protection type	see below

Installation

Make cut-out in enclosure wall of diameter 1.58 inches (40-40.2 mm) for size M40 or 0.48" (12-12.2 mm) for size M12, and mount vent plug with nut. Make sure that the sealing gasket is placed on the outer side of the enclosure. For optimal pressure compensation, it is recommended to use two devices on opposite sides towards the top of the enclosure.

Data subject to change without notice.

Part No.	Stainless Steel	Protection type	Air permeability	1 packing unit	Weight (approx.)
28401.0-00	304	IP66 (EN 60529) / IPX9K (EN 40050-9)	1200 litres/hr	1 piece	5.6 oz. (160g)
28401.0-02	316	IP66 (EN 60529)	120 litres/hr	1 piece	0.6 oz. (17g)

PRESSURE CONTROL

Pressure Compensation Device

High degree of protection (IP55)

Easy to install

In a tightly closed enclosure, pressure differentials can occur during extreme temperature variations, such as day/night operation. When this occurs, the risk of dust and humidity being absorbed into the control panel increases dramatically. The specially designed pressure compensation plug DA 084 permits a controlled change in pressure and can be installed easily in any enclosure. The pressure compensation device is suitable for use in enclosures and electrical cabinets in accordance with DIN EN 62208.

Technical Data

Mounting	PG 29 thread with union nut
Mounting position	vertical*
Material	plastic, UL 94V-0
Sealing	NBR gasket
Air Interface	Approx. 2.8 in ² (7 cm ²)
Operating/storage temperature	-49 to 158°F (-45 to 70°C)
Dimensions	Ø 2.58" x 1.2" (Ø 65.5 x 30.5mm)

* Protection type is restricted to IP54 if mounting position is not vertical

Installation

A hole with a diameter of 1.46" (37mm) is required for mounting. Make sure that the sealing gasket is placed on the outer side panel of the enclosure. For optimal pressure compensation, it is recommended to use two devices on opposite sides towards the top of the enclosures.

Data subject to change without notice.

08400.9-03	IP55	1.1 oz. (31g)

PRESSURE CONTROL

Pressure Compensation Device

UL Type 1, 4, 4X & IP 66 protection

Semipermeable membrane

Easy to install

Pressure differentials in a hermetically sealed enclosure are a result of the heat generated by electrical and electronic components in the enclosure, as well as the fluctuation of the outside temperature. In the case of negative pressure or vacuum, for example, dust and humidity can be absorbed through the door seal and can enter the enclosure.

The 880 PCD1 Pressure Compensation Device provides a protected enclosure environment for valuable and crucial components with a **UL 4X** rated degree of protection. A semipermeable membrane inside the device allows air and humidity to leave the enclosure. In the opposite direction, it only allows dry air into the enclosure while not allowing humidity and dust from the outside to enter.

Technical Data

Mounting	thread M12 x 1.5 with nut
Depth in enclosure	approx. 0.295" (7.5mm)

ACCESSORIES

FIX Self-adhesive Mounting Aid

STEGOFIX is a small aid specially designed to make mounting of smaller DIN rail mountable components easier. It can be used whenever the installation of a DIN rail is impractical, or when there is not enough space left in an enclosure.

Because of its industrial grade self-adhesive it can be installed much easier and quicker than a conventional DIN rail, without the effort of hole drilling and screw mounting. This is especially practical for subsequent changes or additions in an already equipped enclosure.

STEGOFIX can hold components up to 1.1 lbs in weight. Some of the many applications include the mounting of timing relays, series terminals, thermostats, cable channels and even small heaters. In addition, DIN rails can be mounted simply by using several STEGOFIX units.

If the weight of attached components exceeds the load limit, or if a more secure mounting is desired, (e.g. on rough surfaces), it can also be screw-mounted. All that is necessary to install STEGOFIX is a smooth and clean surface. The initial adhesive power is 40%, and after 24 hours, it has its full holding power of 1.1 lbs.

Application examples

Technical Data

Load	1.1 lbs. (500g) after a 24 hour waiting period*
Mounting	self-adhesive (non-aging, high-performance adhesive strip)
Material	plastic UL 94V-0, black
Hole pattern	0.5" distance, Ø 0.14" (12.8mm; Ø 3.6mm)
Operating / Storage temperature	-49 to +158°F (-45 to 70°C)
Dimensions	1.7 x 1.5 x 0.55" (43 x 38 x 14mm)

*depending on the conditions of use (e.g. surface condition, size of the device to be mounted, etc.) higher loads were achieved.

Installation

STEGOFIX can only be mounted on smooth surfaces, e.g. metals, lacquered surfaces and plastics (except polyethylene, polypropylene and rubber). The surfaces must be dry, free from dust, oil, separating agents and other contamination.

Data subject to change without notice.

REGULATING AND MONITORING

Mechanical Hygrostat

- **Efficient condensation control**
- **Adjustable relative humidity range**
- **High switching capacity**
- **DIN rail mountable**

The MFR 012 electromechanical hygrostat is designed to control the relative humidity inside enclosures. When connected to an enclosure heater (dehumidifier), it will energize the heater at the humidity set point in order to raise the dew point. This helps prevent damage and malfunction of electronic components caused by condensation and corrosion.¹ The MFR 012 can also be used to control cooling fans, warning lights or other devices.

¹ The critical relative humidity level for most components is 65%. Above 65% RH, condensation can form and cause malfunctions of electronic equipment. Long term, this can lead to corrosion and permanent damage of electronic components and systems.

Technical Data

Switching difference	4% RH (± 3% tolerance) - at 50% RH
Permissible air velocity	50 ft/sec (15m/s)
Contact type	SPDT / change-over contact
Service life	> 50,000 cycles
Min. Switching capacity	100mA @ AC/DC 20V
Max. Switching capacity	5 A resistive @ AC 250 V DC 20W

REGULATING AND MONITORING

Tamperproof Dual Thermostat

NC / NO or NO / NO in one unit

Fixed set points

Color coded modules

DIN rail mountable

Two thermostats in one housing:

Tamperproof (Pre-set) Thermostat - NC

Opens on temperature rise (red module housing) - for regulating heaters or for switching signal devices when temperature has fallen below the minimum value.

Tamperproof (Pre-set) Thermostat - NO

Closes on temperature rise (blue module housing) - for regulating filter fans, heat exchangers, cooling devices or for switching signal devices when temperature limit has been exceeded.

Heaters and cooling equipment can be switched independently from each other with a temperature offset as opposed to the usual SPDT/change-over contact.

Technical Data

Sensor element	thermostatic bimetal
Contact type	snap-action contact
Contact resistance	< 20mΩ

REGULATING AND MONITORING

Dual Thermostat

- **NC / NO or NO / NO in one unit**
- **Separate adjustable temperatures**
- **Color coded temperature dials**
- **DIN rail mountable**

Two thermostats in one casing:

Thermostat (contact breaker, normally closed) for regulating heaters. The contact opens when temperature is rising.

Thermostat (contact maker, normally open) for regulating filter fans and heat exchangers or switching signal devices when temperature limit has been exceeded. The contact closes when temperature is rising.

Heaters and cooling equipment can be switched independently from each other with a temperature offset as opposed to the usual change-over contacts.

Technical Data

Switching difference	7K (±4K tolerance)
Sensor element	thermostatic bimetal
Contact type	snap-action contact
Service life	> 100,000 cycles
Max. switching capacity	250VAC, 10 (2) A 120VAC, 15 (2) A DC 30W at 24VDC to 72VDC
Max. inrush current	AC 16A for 10 sec.
Connection	4-pole terminal, clamping torque 0.5Nm max.: rigid wire 2.5mm ² (AWG 14) stranded wire ¹ 1.5mm ² (AWG 16)
Housing	plastic, UL 94V-0, light grey
Mounting	clip for 35mm DIN rail, EN 60715
Casing	plastic according to UL94 V-0, light grey
Fitting position	variable
Operating / Storage temperature	-45 to 80°C (-49 to 176°F)
Dimensions	67 x 50 x 46mm
Weight	approx. 90g
Protection type	IP20
Approvals	VDE, UL File No. E164102, CSA, EAC

¹ When connecting with wires, wire end ferrules must be used.

Important note: The contact system of the regulator is subjected to environmental influences, thus the contact resistance may change. This can lead to a voltage drop and/or self-heating of the contacts.

REGULATING AND MONITORING

Electronic Thermostat (24VDC)

- **16 Amp DC switching capacity**
- **Low hysteresis**
- **Wide adjustment range**
- **DIN rail mountable**

The ET 011 is an electronic thermostat for regulating high performance DC 24V equipment. Heating or cooling equipment, as well as signal devices, can be switched via the SPDT (change-over) contact.

A relatively small hysteresis sets the ET 011 Thermostat apart from less accurate mechanical thermostats.

Technical Data

Switching difference	approx. 5.4 °F (3 K)
Sensor element	PTC
Contact type	SPDT / change-over contact
Contact resistance	< 10mΩ
Service life	> 100,000 cycles
Max. switching capacity	16A @ 28VDC
Connection	5-pole terminal, clamping torque 0.5Nm max.: solid wire - AWG 14 max. (2.5mm ²) stranded wire (with wire end ferrule) - AWG 16 max. (1.5mm ²)
Housing	plastic, UL 94V-0, light grey
Mounting	clip for 35mm DIN rail, EN 60715
Mounting position	vertical
Operating/Storage temperature	+32 to +140°F (0 to +60°C)
Operating/Storage humidity	-49 to +176°F (-45 to +80°C)
Dimensions	2.6 x 2.0 x 1.8" (67 x 50 x 46mm)
Weight	approx. 2.4 oz. (70 g)
Protection type	IP20
Approvals	EAC

Wiring examples

Part No.	Operating voltage	Setting range
01190.0-00	DC 24 V (DC 20-28 V)	0 to 60 °C

Data subject to change without notice.

REGULATING AND MONITORING

Small Compact Thermostat

The anti frost assurance is a symbol on the setting scale of the NC thermostat (STO 011) at +11°C. This setting assures closing of the switching contact before 0°C.

Connection diagrams

Part No.	Operating voltage ²	Setting range
01170.0-00	AC 230 V	5 to 60 °C
01170.0-01	AC 230 V	40 to 140 °F
01170.9-00	AC 120 V	40 to 140 °F
01170.9-01	AC 120 V	5 to 60 °C

- Thumbwheel setting dial
- Small hysteresis
- High switching capacity
- Anti frost assurance
- Optimized housing for better air flow

The mechanical thermostat is a two state regulator with small hysteresis. The setting wheel has an anti frost assurance. The housing ensures an optimized air circulation around the bimetal.

STO 011: Thermostat (NC); contact breaker for regulating heaters. The contact opens when temperature is rising.

STS 011: Thermostat (NO); contact maker for regulating of filter fans and heat exchangers or for switching signal devices when temperature limit has been exceeded. The contact closes when temperature is rising.

Technical Data

Switching difference	4K (±3K tolerance)
Sensor element	thermostatic bimetal
Contact type	snap-action contact
Service life	> 100,000 cycles
Max. switching capacity	250VAC, 10 (2) A / 120VAC, 15 (2) A DC 30W at 24VDC to 72VDC
Max. inrush current	AC 16A for 10 sec.
Connection	2-pole terminal, clamping torque 1Nm max.: rigid/stranded ¹ wire 2.5mm (AWG 14)
Mounting	clip for 35mm DIN rail, EN 60715
Casing	plastic according to UL94V-0, light grey
Dimensions	70 x 33 x 42mm
Weight	approx. 50g
Fitting position	variable
Operating/Storage temperature	-45 to +80°C (-49 to +176°F)
Operating/Storage humidity	max. 90% RH (non-condensing)
Protection type	IP20
Approvals	VDE, UL File No. E164102, EAC

¹ When connecting with stranded wires, wire end ferrules must be used.

Important note: The contact system of the regulator is subjected to environmental influences, thus the contact resistance may change. This can lead to a voltage drop and/or self-heating of the contacts.

REGULATING AND MONITORING

Explosion-proof Thermostat

- **Compact design**
- **Fixed temperature setpoints**
- **High switching capacity**
- **DIN rail mountable**

The design of the REX 011 thermostat ensures high accuracy, small switching difference (hysteresis) and a long service life.

Because of the high switching capacity of the thermostat, heaters can usually be directly connected and switched without the need for additional relays.

Technical Data

Explosion proof according to EN	LCIE (Laboratoire Central des Industries Electriques)
Conformity certificate	01 ATEX 6074/02, LCIE N°06 ATEX Q8011, IECEx LCI 07. 0021
Sensor element	thermostatic bimetal
Contact type	NC - normally closed (opens on temperature rise)
Service life	> 100,000 cycles
Max. switching capacity	4A resistive / 1A inductive @ 250VAC
Connection	Si HF - JZ 3 x AWG 18 (0.75mm ²), length 3.3 ft (1m)
Housing	aluminum, black anodized
Mounting	mounting bracket with M8 nut and clip for 35mm DIN rail
Mounting position	variable

HEATING

Touch-Safe Heater 10 & 20W

- Low surface temperature**
- Compact size**
- Wide voltage range**
- Double insulated protection**
- DIN rail mountable**

The CSK 060 is a touch-safe heater for use in enclosures. The design of the heater utilizes natural convection which results in a circulating current of warm air. The surface temperatures on the accessible side surfaces of the housing are minimized as a result of the heater design.

Technical Data

Heating capacity	see table
Heating element	PTC resistor - temperature limiting
Surface temperature	< 185 °F (85 °C), except upper protective grill
Connection	2-pole terminal AWG 14 max. (2.5 mm ²), torque 0.8 Nm max.
Mounting	clip for 35mm DIN rail, EN 60715
Housing	plastic, UL 94V-0, black
Mounting position	vertical
Operating/Storage temperature	-49 to 158 °F (-45 to 70 °C)
Operating / Storage humidity	max. 90 % HR (sans condensation)
Dimensions	3.86 x 2.95 x 1.5" (98 x 75 x 38 mm)
Protection class/Protection type	II (double insulated) / IP20
Approvals	UL File No. E150057, VDE, GOST TR
Note	other voltages available upon request

HEATING

Touch-Safe Heater 50 - 150W

- **Low surface temperature**
- **Small size**
- **Wide voltage range**
- **Double insulated protection (plastic)**
- **DIN rail mountable**

Touch-safe heater for the use in enclosures with electrical/electronic components. The design of the heater supports the natural convection which results in a high air-current of warm air. The surface temperatures on the accessible side surfaces of the housing are kept down as a result of the heater design. Our complete range of thermostats and hygrometers can directly be connected to the heater CS 060. This heater is also available in a version with plug-in thermostat requiring no additional wiring (CSF 060). The heaters are designed for permanent operation.

Technical Data

Operating voltage	120 - 240V AC/DC ¹ (min. 110V, max. 265V)
Heating element	PTC resistor - temperature limiting
Surface temperature	< 80°C (176°F), except upper protective grill
Connection	4-pole terminal 2.5mm ² , torque 0.8Nm max.
Casing	plastic according to UL94 V-0, black
Mounting	clip for 35mm DIN rail, EN 60715
Fitting position	vertical airflow (air outlet up, connection on bottom)
Operating / Storage temperature	-45 to 70°C (-49 to 158°F)
Operating / Storage humidity	max. 90% RH (non-condensing)
Protection class / Protection type	II (double insulated) / IP20
Approvals	UL File No. E150057, VDE
Note	other voltages on request

¹Operating with voltages below 140V AC/DC reduces heating performance by approx. 10%.

HEATING

Touch-Safe Heater 50W - 150W

- **Low surface temperature**
- **Integrated thermostat**
- **Compact size**
- **Wide voltage range**
- **Double insulated protection**
- **DIN rail mountable**

Touch-safe heater for the use in enclosures with electrical/electronic components. The design of the heater supports the natural convection which results in a high air-current of warm air. The surface temperatures on the accessible side surfaces of the housing are kept down as a result of the heater design. This model with plug-in thermostat does not require additional wiring. The heaters are designed for permanent operation. This heater is also available in a version without thermostat (CS 060).

Technical Data

Operating voltage	120 - 240VAC ¹ (min. 110V, max. 265V)
Heating element	PTC resistor - temperature limiting
Surface temperature	< +80°C (+176°F), except upper protective grill
Connection	2-pole terminal 2.5mm ² , torque 0.8Nm max.
Casing	plastic according to UL94 V-0, black
Mounting	clip for 35mm DIN rail, EN 60715
Fitting position	vertical airflow (air outlet up, connection on bottom)
Operating / Storage temperature	-40 to 70°C (-40 to 158°F) / -45 to 70°C (-49 to 158°F)
Operating / Storage temperature	max. 90% RH (non-condensing)
Protection type / Protection class	IP20 / II (double insulated)
Approvals	VDE, UL File No. E150057, EAC

HEATING

PTC Heater 15 -150W

- **Compact size**
- **Wide voltage range**
- **Heating power adjusts to ambient temperature**
- **Cage clamp connectors for quick & easy wiring**
- **DIN rail mountable**

These heaters are used in enclosures where damage from condensation must be prevented, or where the temperature must be maintained above a minimum value. The aluminum profile heater body design has a chimney effect to distribute heat evenly. The cage clamp connectors save time and simplify installation.

Technical Data

Operating voltage	120-240V AC/DC* (min. 110V, max. 265V)
Heating element	PTC resistor - temperature limiting
Heater body	extruded aluminum profile, anodized
Connection	3 cage clamps for solid wire AWG 20-14 (0.5-2.5mm ²), and stranded wire AWG 20-16 (0.5-1.5mm ²) with wire end ferrule
Connection casing	plastic, UL 94V-0, black
Mounting	clip for 35mm DIN rail, EN 60715
Mounting position	vertical
Operating / Storage temperature	-49 to 158°F (-45 to 70°C)
Operating / Storage humidity	max. 90 %RH (non-condensing)
Protection class / Protection type	I (grounded) / IP20
Approvals	UL File No. E150057, VDE, GOST-R
Note	other voltages available upon request

*Operating with voltages below 140V AC/DC reduces heating performance by approx. 10%.

HEATING

Touch-safe PTC Fan Heater 150W to 400W

Small, compact design

Quiet in operation

Dynamic heating up

Clip or screw fixing

Fan heater prevents formation of condensation and provides an evenly distributed interior air temperature in enclosures with electric/electronic components. The heater is connected using the internal terminal connectors. The small size of the CS / CSL 028 makes it ideal for use in enclosures where space is at a premium.

Technical Data

Heating element	PTC resistor - temperature limiting
Surface temperature	150W/250W: max. 50°C (122°F), 400W: max. 65°C (149°F) each except upper protective grille at 20°C (68°F) ambient temperature
Axial fan, ball bearing	air flow, free flow CS 028: 13.8m³/h CSL 028: 45m³/h (230VAC), 54m³/h (120VAC) service life 40,000h at +40°C (+104°F)
Connection	2-pole clamp max. 2.5mm² (CSL 028 with strain relief), clamping screw torque 0.8Nm max.
Mounting	clip for 35 mm DIN rail, EN 60715 or screw fixing (Ø 5.3mm)
Casing	plastic according to UL94 V-0, black
Operating / Storage temperature	-45 to +70°C (-49 to +158°F)
Operating / Storage humidity	max. 90% RH (non-condensing)
Protection type / Protection class	IP20 / II (double insulated)
Approvals	UL File No. E150057 (according to UL 5084, NITW File on request), EAC, VDE only: 230 V other voltages available upon request

HEATING

Fan Heater 100 - 400W

Shown: 100W - HVL 031 Fan Heater

- **Compact size**
- **Flat design**
- **Built-in overheat protection**
- **3-side DIN rail mountable**

The compact HVL 031 high-performance fan heater prevents formation of condensation and provides an evenly distributed interior air temperature in enclosures. For large OEM use, this fan heater can also be provided without the fan, in which case the OEM/customer must provide a fan which meets the minimum airflow requirements.

Important! Heater must be operated together with a fan. Operating without a fan creates the danger of overheating.

Technical Data

Heating element	high performance cartridge
Overheat protection	built-in temperature limiter
Heater body	die-cast aluminum, glass bead finish
Connection	3-pole terminal AWG 14 max. (2.5mm ²), torque 0.8Nm max..
Connection housing	plastic, UL 94V-0, black
Mounting	clip for 35mm DIN rail, EN 60715
Mounting position	horizontal
Operating / Storage temperature	-49 to +158°F (-45 to +70°C)
Protection class / Protection type	I (grounded) / IP20
Axial fan, ball bearing	service life 50,000h at 77°F (25°C)
Air flow, free blowing	see table below
Axial fan connection	2-pole terminal AWG 14 max. (2.5mm ²), terminals L2/N2
Approvals	UL File No. E187294 (all), VDE (230VAC only)

HEATING

Fan Heater 250 & 400W

- **Compact size**
- **Built-in overheat protection**
- **Long service life**
- **DIN rail mountable**

The compact HGL 046 fan heater prevents formation of condensation. The integrated high performance axial fan provides forced air circulation and so guarantees an even temperature in enclosures. The heater is wired using the internal terminal connectors.

Technical Data

Heating element	resistance - micanite
Overheat protection	built-in temperature limiter
Heater body	extruded aluminum, anodized
Surface temperature	400W heater - max. 167°F (75°C)
Axial fan, ball bearing	service life 50,000h at 77°F (25°C)
Air flow, free blowing	AC: 26 cfm (45m³/h) - 50Hz; 32 cfm (54m³/h) - 60Hz DC: 32 cfm (54m³/h)
Connection	3-pole terminal AWG 16 max. (1.5mm²) with strain relief, clamping torque 0.8Nm max.
Connection housing	plastic, UL 94V-0, black
Mounting	clip for 35mm DIN rail, EN 60715
Mounting position	vertical
Operating / Storage temperature	-49 to +158°F (-45 to +70°C)
Protection class	I (grounded)
Protection type	IP20

Note: In the case of **24VDC** and **48VDC**, the fan heater must be switched via a relay. For this application, the SM 010 Electronic Relay (Part No. 01000.0-00 or 01001.0-00) is recommended.

HEATING

Foot-mount Fan Heater 1200W

- **Compact design**
- **Built-in overheat protection**
- **Integrated adjustable thermostat (optional)**
- **Double insulated plastic housing**

The compact CS 030 high performance fan heater prevents formation of condensation and provides an evenly distributed interior air temperature in enclosures. This fan heater is available with an optional integrated thermostat for temperature control. The CS 030 was designed as a stationary unit for the bottom of the enclosure. For panel or DIN rail mount, the CS 130 fan heater is recommended.

Technical Data

Heating element	PTC resistor - temperature limiting
Overheat protection	built-in temperature limiter
Axial fan, ball bearing	service life 50,000h at 77°F (25°C)
Air flow, free blowing	94 cfm (160m³/h)
Connection	2-pole terminal AWG 16 max. (1.5mm²) with strain relief, clamping torque 0.8Nm max.
Housing	plastic, UL 94V-0, black
Mounting	M5 screws (not included)
Mounting position	horizontal
Operating / Storage temperature	-49 to 158°F (-45 to 70°C)
Operating / Storage humidity	max. 90 %RH (non-condensing)
Dimensions	4.7 x 5.7 x 6.6" (120 x 145 x 168mm)
Weight	approx. 2.6 lbs. (1.2kg)
Protection class / Protection type	II (double insulated) / IP20

HEATING & COOLING INSTRUMENTS

Large enclosure heater - Series PXFT

Quick Features :

- Designed to maintain a suitable temperature inside enclosures
- All heaters have a built-in thermostat
- High surface aluminum heat emitter eliminates the need for a fan while providing low radiation and high convection heating.
- A movable bracket allows the heater to be floor or wall mounted with the terminal box located on the left, right, top or bottom side.
- Wire guards are provided with the PXFT-300, 400 and 600 watt heaters and optionally available with the 50, 125 and 200 W units.

Technical Data :

Thermostat rating : 25A at 240V, S.P.S.T., adjustable from 0°C to 50°C (30-120°F)
 Use environment : Not suitable for use outdoors, unprotected from the weather.
 Moisture resistant heaters available upon request.

Surface temp. :
 50W unit : ~100°C (212°F)
 125W unit : ~170°C (338°F)
 All other units : ~210°C (410°F)

CATALOG NUMBER	VOLTAGE	POWER (see note)	WIRE GUARD INCLUDED ?	Length 'L' in (mm)	Weight lbs. (kg)
PXFT050	120 V	50 W	No, optional	8.375 (213)	2.6 (1.1)
PXFT125	120 V	125 W	No, optional	8.375 (213)	2.6 (1.1)

PXFT300	120 V, 240 V	300 W	Yes	15.000 (381)	3.5 (1.6)
PXFT400	120 V, 240 V	400 W	Yes	21.750 (553)	5.5 (2.5)
PXFT600	120 V, 240 V	600 W	Yes	28.500 (724)	7.5 (3.4)

Determine the right heater size for your needs

Wattage selection

The wattage requirement is determined from a consideration of the surface area, insulation properties of the enclosure, the temperature difference between the ambient and the enclosure and the heating power generated by existing components (e.g. transformer). The following formula can generally be used to calculate wattage requirements for uninsulated enclosures :

$$P_h = (A \times \Delta T \times k) - P_v$$

- P_h = Required heating power for your application in Watts (W)
 P_v = Heating power generated by existing components in Watts
 A = Exposed enclosure surface area in square meters (m²)
 ΔT = Temperature differential between the desired minimum interior temperature and the lowest possible external temperature of the enclosure in Kelvin (K). 1.8°F = 1°C = 1K
 k = Heat transmission coefficient of the enclosure material used :
- Painted steel : 5.5W/m²K
 - Stainless steel : 3.7W/m²K
 - Aluminum : 12W/m²K
 - Plastic : 3.5W/m²K

For outdoor applications, it is recommended to double the heating power.

This formula is supplied for reference purposes only. EXM offers no warranty, expressed nor implied, as to the application of this table in different environments, as the equipment may be subjected to conditions out of our control.

ENVIRONMENT CONTROL - AIR CONDITIONERS

EXM IQ series air conditioner advantages

By listening to the demands of the electronics and electrical industries, EXM has developed modern closed-loop cooling systems to compliment today's highly engineered workstations.

The IQ series design features include a rugged 16 GA welded steel, dent resistant cabinet construction (which is up to 45% lighter in weight, for easy installa-

tion). Features also include an increase in operating efficiency up to 35%, a space-saving aesthetic cabinet design, up to 40% thinner, saving valuable factory floor space.

A multi-function programmable digital controller is also standard on every unit, at no extra cost. Vertical mount air conditioners also include a standard, built-in condensate evaporator.

In addition, remote control read-out and central computer control monitoring are optionally available for a more effective thermal management solution for monitoring electronic enclosure thermal conditions, even in those situations when visual readouts and audible alarms are not convenient to the operator.

UL, cUL, CE.

Thermal Management Center – Optional

LCD Display, Ethernet Communications Link and All the Features of the Standard Digital Controller

PLUS

- LCD Message Center
- Expanded Temperature and Alarm Ranges
- Improved Functionality
- Ethernet Communications Link - Optional

Standard Cooling System Features

- Up to 35% more efficient
- Up to 40% savings in space
- Up to 45% lighter in weight

- CFC Free refrigeration system
- Rugged, lightweight, dent resistant welded steel cabinet construction
- Maintenance free permanently lubricated blowers
- Efficient, quiet, long lasting rotary compressor
- Built-in condensate evaporation package on vertical mount air conditioners.
- 100% factory tested
- Models available with top and bottom cold air discharge.
- **Units available from 1000 to 27000 BTUH**
- **Vertical mount and top mount units available**

units available

- All EXM air conditioners use PermaCool™ electrostatic filter-media to keep dust and other industrial residues from clogging the condenser air passages. The filter material is a durable ¼" corrugated polypropylene media with 10 micron filtration which retains a low resistance to air-flow. The filter will withstand harsh factory environments and will not degrade over time. Simple washing or vacuuming is all that is necessary to maintain the filter media over an indefinite period of time.

Data subject to change without notice.

Cooling system sizing calculation

The following calculations have been developed to determine the cooling requirements for standard uninsulated metal NEMA rated enclosures for indoor applications.

Determine your cooling requirements by completing the following calculations, contacting your EXM sales representative at 1-800-363-2423, or e-mailing info@exmweb.com.

Please note: This formula is supplied for reference purposes only. EXM offers no warranty, expressed nor implied, as to the application of this formula, as the equipment may be subjected to conditions out of our control.

Sizing Parameters

- Watts** = Heat energy produced by electronic equipment
- Surface area** = Surface area of the enclosure that will allow heat transfer (in sq.ft.)

$$\frac{(H \times W) \times 2 + (H \times D) \times 2 + (W \times D) \times 2}{144 \text{ sq. in.}}$$
 * Eliminates surface not allowing heat transfer
- ΔT** = Difference between the maximum temperature outside the enclosure and the desired maximum temperature inside the enclosure.

Calculations

- Step 1** = Determine the Internal Heat Dissipation of the enclosed equipment in BTU.
BTU per hour = Watts x 3.413
- Step 2** = Determine External Heat Transfer.
BTU per hour = Surface Area x 1.25x ΔT
- Note** = The enclosure internal temperature must be at least 5°F higher than the ambient temperature to select a heat exchanger. This will result in a negative BTU per hour in step 2.
- Step 3** = Determine the Required Cooling Capacity in BTU per hour.
BTU per Hour = Sum of Step 1 and Step 2. x 1.1 Safety Factor

Air conditioner selection : Determine the required cooling capacity in BTU per hour.
BTU per hour = (The sum of Step 1 and Step 2) x 1.1 safety factor
 Select the EXM air conditioner that meets or exceeds the cooling capacity in BTU per hour.

Heat exchanger selection: **Watts per °F = (The sum of Step 1 and Step 2) x 1.1 safety factor (Max. internal temp. - Max. outside temp.)x 3.413**
 Select the heat exchanger that meets or exceeds the required cooling capacity in Watts per °F.

Vertical mount air conditioner - 1000 to 1300 BTUH

The worlds smallest compressor based air conditioner!

This unit can be used in multiples to provide precise BTU control, and operate from 1000 to 3000 BTUH depending on environmental conditions.

STANDARD FEATURES

- Digital temperature controller with alarm
- Built in condensate evaporator
- Durable 16 gauge welded steel construction
- Efficient, quiet and long lasting rotary compressor
- Environment friendly HFC refrigerant
- Easy pull-out filter
- UL Listed
- Space saving aesthetic cabinet design
- Designed to mount on side of enclosure while maintaining NEMA type 12, 3R, 4 or 4X integrity

OPTIONS & ACCESSORIES

- Stainless Steel
- Replacement Filters
- Corrosive Packages
- Crankcase Heater
- Internal Heat

Extra Slim vertical mount air conditioner - 1200 to 1800 BTU

The **IQ1200VXS** extra slim vertical mount air conditioners are used to reduce heat accumulation within enclosures and maintain a safe operating temperature. These units use closed-loop cooling technology, which removes heat without letting outside air into the sealed enclosure. All units feature a digital programmable temperature controller with an

alarm. The air conditioners feature a rugged 16 GA welded steel, dent resistant construction. The units have a space saving aesthetic design. A built-in condensate evaporator is included. The units are powered by an efficient, quiet and long lasting rotary compressor, with a environment friendly HFC refrigerant. All units are factory tested

and are designed to mount on the side of an enclosure, while maintaining NEMA 12 integrity. Units are ANSI/ASA 61 gray or brushed stainless steel.

UL / ULc Listed,
NEMA/EEMAC 12 / IP54
Steel units: NEMA 4 w/N4GK kit
SS units: NEMA 4X w/N4GK kit

FEATURES

- Digital temperature controller with alarm
- Durable 16 gauge welded steel construction
- Also available in stainless steel
- Built in condensate evaporator
- Easy pull-out filter
- Efficient, quiet and long lasting rotary compressor
- Environment friendly HFC refrigerant
- Space saving aesthetic cabinet design
- 100% factory tested
- Designed to mount on side of enclosure while maintaining NEMA type 12, 4 or 4X integrity

A built-in condensate evaporation package is included. The units are powered by an efficient, quiet and long lasting rotary compressor, with a CFC-free refrigeration system. All units are factory test-

ed and are designed to mount on the side of an enclosure, while maintaining NEMA 12 integrity. Units are ANSI/ASA 61 gray or brushed stainless steel.

UL / ULc Listed,
NEMA/EEMAC 12 / IP54
Steel units: NEMA 4 w/N4GK kit
SS units: NEMA 4X w/N4GK kit

FEATURES

- Digital temperature controller with alarm
- Durable 16 gauge welded steel construction
- Also available in stainless steel
- Built in condensate evaporator
- Easy pull-out filter
- Efficient, quiet and long lasting rotary compressor
- Environment friendly HFC refrigerant
- Space saving aesthetic cabinet design
- 100% factory tested
- Designed to mount on side of enclosure while maintaining NEMA type 12, 4 or 4X integrity

Vertical mount air conditioner - 6000 BTUH

For enclosure or panel cooling, our exclusive use of rotary compressor allows us to manufacture the smallest, lightest weight, most energy efficient cooling solutions in the industry.

STANDARD FEATURES

- Digital temperature controller with alarm
- Built in condensate evaporator
- Durable 16 gauge welded steel construction
- Efficient, quiet and long lasting rotary compressor
- Environment friendly HFC refrigerant
- Easy pull-out filter
- UL Listed
- Space saving aesthetic cabinet design
- Designed to mount on side of enclosure while maintaining NEMA type 12, 3R, 4 or 4X integrity

- Conditioned Enclosure Air Flow
- Ambient Air Flow

OPTIONS & ACCESSORIES

- Stainless Steel
- Remote Controller Kit
- Replacement Filters
- Corrosive Packages
- Crankcase Heater
- Low Ambient
- External Heat Output
- Internal Heat
- Alarm Output

Top mount air conditioner - 3000 to 6000 BTU

The IQ3000T top mount air conditioners are used to reduce heat accumulation within enclosures and maintain a safe operating temperature.

These units use closed-loop cooling technology, which removes heat without letting outside air into the sealed enclosure. All units feature a digital programmable temperature controller with an alarm. The air conditioners fea-

ture a rugged 16 GA welded steel, dent resistant cabinet construction. The units have a space saving aesthetic cabinet design. A built-in condensate evaporation package is included. The units are powered by an efficient, quiet and long lasting rotary compressor, with a CFC-free refrigeration system. All units are factory tested and are designed to mount on the side of an enclosure, while

maintaining NEMA 12 integrity. Units are ANSI/ASA 61 gray or brushed stainless steel.

UL / ULc Listed,

SS units: NEMA 4X w/N4GK kit
NEMA/EEMAC 12 / IP54
Steel units: NEMA 4 w/N4GK kit
SS units: NEMA 4X w/N4GK kit

FEATURES

- Digital temperature controller with alarm
- Durable 16 gauge welded steel construction
- Also available in stainless steel
- Built in condensate evaporator
- Easy pull-out filter
- Efficient, quiet and long lasting rotary compressor
- Environment friendly HFC refrigerant
- Space saving aesthetic cabinet design
- 100% factory tested
- Designed to mount on side of enclosure while maintaining NEMA type 12, 4 or 4X integrity
- Designed to mount on side of enclosure while maintaining NEMA type 12, 4 or 4X integrity

Vertical and Top mount air conditioner - Hazardous duty

The IQ2200VSXP2 top and vertical mount hazardous duty air conditioners have been designed to provide a safe environment for your equipment by cooling and dehumidifying the enclosure which houses your equipment in an efficient, modern, aesthetically pleasing package requiring minimal maintenance. EXM offers models of hazardous duty cooling systems ranging in cooling capacity from 2,200 to 20,000

BTU per hour to provide air conditioning systems for many of your environmental needs. They are designed for standard and pressured enclosure systems Class I, Division II, Groups B, C, and D for hazardous duty applications.

The air conditioners feature a rugged 16 GA welded steel, dent resistant cabinet construction. The units have a space saving aesthetic cabinet design. The

units are powered by an efficient, quiet and long lasting ball bearing type fans.

All units are factory tested and are designed to mount on the top of an enclosure, while maintaining NEMA 12 integrity. Units are ANSI/ASA 61 gray or brushed stainless steel.

AIR CONDITIONER FILTERS

PermaCool electrostatic ambient air filters

The **POF series** pull-out filters are used with the IQ series air conditioners.

EXM air conditioners use PermaCool electrostatic filter media to keep dust and other industrial residues from clogging the condenser cooling air passages. The filter media is a rigid

and durable 1/4" corrugated polypropylene media with 10 micron filtration which maintains a low resistance to airflow. The filter media will withstand harsh factory environments and will not degrade over time. Simple washing or vacuuming is all that is necessary to maintain the filter media

over an indefinite period of time. PermaCool's dense, three layer, 1/4" waffle weave configuration enhances its filtration abilities and creates a rigid electrostatic air filter. Unlike other media which may compress and restrict airflow, PermaCool retains its low resistance design.

THREE LAYER, 1/4" WAFFLE WEAVE CONFIGURATION

Data subject to change without notice.

Heat exchanger - cross flow

The IQ3400HE-FX heat exchangers cross flow are designed to provide from 5.7 to 83 watts/°F of closed-loop heat removal capacity. A powerful fan is used to draw the heated air, created by the enclosed electronic equipment, over the heat-absorbing convoluted core. Utilizing thermal dynam-

ic principles, the heat is transferred to the ambient side of the core, where heat is absorbed by the cooler ambient air stream. The conditioned air is then re-circulated into the equipment enclosure to repeat the heat absorbing process.

The heat exchanger features a

rugged 16 GA welded steel, dent resistant cabinet construction.

All units are factory tested and are designed to mount on the side of an enclosure, while maintaining NEMA 12, 3R, 4 or 4X integrity. Units are ANSI/ASA 61 gray or brushed stainless steel.

FEATURES

- Durable 16 gauge welded steel construction
- Also available in stainless steel
- Space saving aesthetic cabinet design
- Efficient epoxy coated aluminum core providing excellent corrosion resistance
- Quiet, long lasting ball bearing type fan
- Designed to mount on side of enclosure while maintaining NEMA type 12, 3R, 4 or 4X

OPTIONS & ACCESSORIES

Corrosive Package

Recommended for coastal areas or anywhere corrosives to copper or aluminum may be present in the atmosphere.

- *Ambient Corrosive Package – CP*
- *Total Corrosive Package – CP2*

Alarm Output Signal

Wire output lead provides a dry contact signal when an alarm condition occurs. Contact may be NO, NC or both NO and NC.

- *Dry Contact-Normaly Open/Closed – X03*

NEMA 4 Gasket Kit

Maintains NEMA 4 or 4X seal at enclosure/air conditioner interface.

- *NEMA 4 Gasket Kit – N4GK*

Low Ambient Options

Recommended for models used in an atmosphere where ambient temperature may fall significantly below the enclosure temperature.

- *Crankcase Heater – CH*
- *Low Ambient Package – CH & By-pass Valve – LA*

External Heat Output

Electrical output used when a heater is required to maintain satisfactory temperature and humidity conditions. Output is driven by EXM's Controller.

Fan Heater
Available 100 to 400 watts

PTC Fan Heater
Available 400 to 650 watts

Remote Controller Kit

May be located inside the enclosure for additional security or located on an accessible enclosure surface for more convenient display and control.

- *Controller Kit XC*

Condensate Management Equipment

Recommended for extremely humid environments where condensate dripping onto the floor is prohibited or undesired.

- *600 Watt Evaporator 120V – CEV3*
- *600 Watt Evaporator 230V – CEV4*

Standards and certifications

CSA and UL adopt expanded Memorandum of Understanding and complete first phase of mutual component acceptance program on March 1, 2004.

This agreement, which is designed to assist manufactures of electrical equipment in getting their products to Canadian and

U.S. markets more quickly, without redundant testing, was the result of several months of negotiation between UL and CSA.

Industrial control panels are included in the first Phase list of components. A complete listing can be obtained at the UL and

CSA web sites:

www.ul.com/components

This Memorandum of understanding has generated additional markings that will be appearing on electrical components. Below is a summary of the markings.

UL certifications

UL Listed Mark

This is the most common UL mark. A product carrying this mark means UL has certified that it meets UL's safety requirements.

Underwriters Laboratories Inc.

<http://www.ul.com>

333 Pfingsten Road,
Northbrook, IL, 60062, USA

C-UL Listed Mark

is applied to products for the Canadian market. Products with this marking have been evaluated to meet Canadian safety

requirements, which may be somewhat different from the U.S. safety requirements.

C-UL-US Listed Mark

This mark indicates compliance with both Canadian and U.S. requirements. This Canadian /U.S. UL mark is optional, but UL

encourages its use for manufacturers with products certified for both countries.

The Underwriters Laboratories (UL) independently tests products in their laboratories to ensure compliance with standard. Furthermore, UL sends site

inspectors to our facilities to check our manufacturing process and to verify proper material specifications. The performance rating established by UL are simi-

lar to those of CSA and NEMA. See our rating reference sheet for details.

CSA certifications

For Canada

A CSA mark on its own, without indicators, means that the product is certified primarily for

the Canadian market to the applicable Canadian standards.

For the US

A CSA mark with the indicator "US" means that the product is

certified for the U.S. market to the applicable U.S. standards.

For the U.S. and Canada

A CSA mark with the indicators "C" and "US" means that the product is certified for both the

U.S. and Canadian markets, to the applicable U.S. and Canadian standards.

CSA International (CSA) independently tests products in their laboratories to ensure compliance with standards. Furthermore, CSA sends site inspectors to our facilities to

check our manufacturing process and to verify proper material specifications. The performance ratings established by CSA are similar to those of UL and NEMA. See our ratings reference sheet

for details.

CSA International

<http://www.csa.ca>

178 Rexdale Boulevard
Etobicoke, ON, M9W 1R3
Canada

Data subject to change without notice.

Standards and certifications

NEMA

NEMA provides a forum for the standardization of electrical equipment, enabling consumers to select from a range of safe,

effective, and compatible electrical products.

NEMA does not require independent testing and leaves compliance up to the manufacturer.

The performance ratings established by NEMA are similar to

those of UL and CSA. See our ratings reference sheet for details.

National Electrical Manufacturers' Association

<http://www.nema.org>

1300 North 17th Street
Rosslyn, VA, 22209, USA

EEMAC

EEMAC provides a forum for the standardization of electrical equipment, enabling consumers to select from a range of safe,

effective, and compatible electrical products.

EEMAC does not require independent testing and leaves compliance up to the manufacturer.

The performance ratings established by EEMAC are similar to

those of UL and CSA. See our ratings reference sheet for details.

Electrical Equipment Manufacturers Advisory Council

<http://www.electrofed.com>

5800 Explorer Drive, Unit 200
Mississauga, ON, L4W 5K9

IEC

The performance ratings established by IEC, known as IP rat-

ings, are different from those of NEMA, UL and CSA because of different testing conditions.

Therefore, IP ratings cannot be

exactly equated to NEMA ratings. See our ratings reference sheet for details.

International Electrotechnical Commission (IEC)

CE and IEC Classifications

The CE Marking is a European Union (EU) compliance symbol. It is not a standard. The intent is for the CE Marking to be applied by the final equipment manufacturer to the end product, indicating that the product complies with all the European Directives and essential Harmonized standards.

The final equipment manufacturer is the one responsible for insuring compliance to all the applicable EU Directives and Harmonized standards.

A listing of Directives and associated Harmonized standards can be found at:

www.newapproach.org

A directive in the European Community is a European law that is legally binding for every member state and is above the laws of the individual member

states. This new European legislation has created a uniform market within Europe. The goals of these legislations are primarily safety related, with the protection of the public and consumer being a primary concern. A further goal is the harmonization of related National regulations.

The Directives stress what is to be attained; how to attain it is left to the producers.

Empty enclosures for industrial control equipment are inactive components of the final assembly. By building their enclosures to the applicable Directives and applicable Harmonized standards, the manufacturer of the enclosures is eligible to receive a manufacturer's Declaration of Conformity. The certificate assists the final equipment manufacturer in obtaining the CE Marking.

The applicable European Directives and European standards that apply to enclosures are as listed below.

Applicable European Directives

2006/95/EC Low Voltage Directive for electrical equipment within certain Voltage limits previous amended versions 72/23/EEC & 96/68/EEC

2004/108/EC EMC Directives relating to electromagnetic compatibility previous amended versions 89/336/EEC, 92/31/EEC, 93/68/EEC

Note: the EMC directive is only secondarily applicable since an empty enclosure does not produce electromagnetic interference.

98/37/EC Machinery Safety Directive

Applicable European Standards

EN 60529:1991 (IEC 529-1) degree of protection provided by enclosures (IP code)

Data subject to change without notice.

Standards and certifications

RoHS

2002/95/EC Compliant

The RoHS Directive stands for "the restriction of the use of certain hazardous substances in electrical and electronic equipment". This Directive bans the placing on the EU market of new electrical and electronic equipment containing more than

agreed levels of lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyl (PBB) and polybrominated diphenyl ether (PBDE) flame retardants.

California has passed SB 20: Electronic Waste Recycling Act of 2003, or EWRA. This law prohibits the sale of electronic devices after January 1, 2007, that are prohibited from being sold under the EU RoHS directive, but across a

much narrower scope that includes LCDs, CRTs, and the like and only covers the four heavy metals restricted by RoHS. EWRA also has a restricted material disclosure requirement. Other US states and cities are debating whether to adopt similar laws, and there are several states that have mercury and PBDE bans already. Federal RoHS-like regulation in the US is unlikely in the near to medium term.

CEA

The CEA Mention refers to the CEA-310-E Mounting Flange standard defined by the Consumer Electronic Association;

it supersedes the EIA-310-D defined by the Electronic Industries Association. The configuration of specific items in this document is based upon a 19-inch rack design as defined in the CEA-310-E Standard. This design applies to the front internal

mounting surface within a Cabinet Enclosure or Rack that provides a mounting surface for Computer Servers, electrical equipment, structure guides, slide rails, and/or panels.

cULus

This new UL Recognized Component Mark, which became

effective April 1, 1998, may be used on components certified by UL to both Canadian and U.S. requirements. Although UL had not originally planned to introduce a combined Recognized Component Mark, the popularity

of the Canada/U.S. Listing and Classification Marks among clients with UL certifications for both Canada and the United States has led to the new Mark.

Comparison Between NEMA Enclosures Type Numbers and IEC Enclosure Classification Designations

IEC Publication 60529 Classification of Degree of Protection Provided by Enclosures provides a system for specifying the enclosures of electrical equipment on the basis of the degree of protection provided by the enclosure. IEC 60529 does not specify degrees of protection against mechanical damage of equipment, risk of explosions, or conditions such as moisture (produced for example by condensation), corrosive vapors, fungus, or vermin. The NEMA Standard for Enclosures for Electrical Equipment does test for environmental

conditions such as corrosion, rust, icing, oil, and coolants. For this reason, and because the test and evaluations for other characteristics are not identical, the IEC Enclosure Classification Designations cannot be exactly equated with the NEMA type numbers.

The IEC designation consists of the letters IP followed by two numerals. The first characteristic numeral indicates the degree of protection provided by the enclosure with respect to persons and solid foreign objects entering the enclosure. The second character-

istic numeral indicates the degree of protection provided by the enclosure with respect to the harmful ingress of water.

Table A-1 provides an equivalent conversion from the NEMA enclosure Type number to the IEC Enclosure Classification Designations. The NEMA enclosure type numbers meet or exceed the test requirements for the associated IEC Classification; for this reason Table A-1 cannot be used to convert from IEC classifications to NEMA enclosure Type numbers.

Data subject to change without notice.

Classification of hazardous locations

Safety is always a consideration when using electrical equipment.

The growth of complex industrial processes created a need for standards and certifications in potentially explosive environments. Today the various classifications of hazardous locations continue to evolve towards harmonized standards.

A hazardous area can be defined as " An area in which flammable substance in the form of gas, vapor, dust or fiber when mixed with the air, is present in such proportions that it can explode when in contact with an ignition source. This approach is used by the United States (Through the National Electrical Code. NEC). Canada (The Canadian Electrical code. CEC). Europe (CENELEC). And the rest of the world (International Electrical Code. IEC)

Hazardous locations are broken down into Divisions, Zones, Classes and Groups. This enables the manufacturer to specify exactly the type of hazardous location the product has been certified.

In both Canada and the United States The Hazardous Locations are divided into Classes.

Class I Hazardous due to the presence of flammable substances such as gases or vapors

Class I I Hazardous due to the presence of flammable substances such as dust or powders

Class I I I Hazardous due to the presence of flammable substances in a fiber or flyings

Class 1

Hazardous Locations due to flammable substances such as Gases & Vapors (Class 1) is handled differently by the various certification organizations. The rest of the world does not use class designations, but independent of how this area is designated, it is how this area is divided that makes the major difference.

The United States is generally using the Division Method on identifying the levels of Class I Locations that is:

Division 1 Danger can be present during normal functioning, during repair or maintenance, or where a fault may cause the simultaneous failure of electrical equipment.

Division 2 Combustible material is present but confined to a closed container or system, is normally vented or is in an area adjacent to a division 1 location.

Europe and other parts of the world are using the Zone Method to identify the levels of hazardous locations due to the presence of flammable substances such as gases and vapors. The United States does recognize the Zone Method as per article 505 of the NEC but their preference is the Division Method as per article 500 of the NEC.

Canada has been much more aggressive in the pursuit to harmonize to the international requirements and has thus opted to now use the Zone Method for

all new installations.

The IEC rules advanced the NEC logic to a new level.

The IEC recognized the NEC divisions were based more on whether the hazard was present under either normal or abnormal conditions, instead of on the duration of the hazard.

Therefore the IEC established three divisions or Zones, that are based on how often the hazard is present rather than upon normal versus abnormal conditions.

The three Zones break the NEC's Division 1 into two distinct zones, one of which (Zone 0) is for those locations that are the most hazardous because they remain hazardous for a long time. Separating Zone 0 from the remainder of what is Division 1 in the NEC system permits a more refined treatment of the hazards of the two zones. It restricts methods of protection in Zone 0 while permitting more relaxed method of protection in Zone 1 locations.

Temperature is also a factor. Equipment shall not be installed in an area where vapors and gases are present that have an ignition temperature less than the maximum external temperature of the equipment.

Data subject to change without notice.

Classification of hazardous locations

The Hazardous Location for Gases and Vapors can be summarized as per Table 1

Table 1 :
HAZARDOUS LOCATION CLASSIFICATIONS

CLASSIFICATION	IEC, CENELEC NEC 505, NEW CEC INSTALLATION CODES	NEC 500, OLDER EXISTING CEC INSTALLATIONS CODES
MATERIAL PRESENCE		
Continuously Present	Zone 0	Division 1
Intermittently present	Zone 1	Division 1
Abnormally Present	Zone 2	Division 2
APPARATUS GAS & VAPORS		
Acetylene	Group II C	Class I / Group A
Hydrogen	Group II B	Class I / Group B
Ethylene	Group II B	Class I / Group C
Propane	Group II A	Class I / Group D
Methane	Group I	N/A
MAX SURFACE TEMPERATURE		
450 C	T 1	T 1
300 C	T 2	T 2
280 C	—	T 2A
260 C	—	T 2B
230 C	—	T 2C
215 C	—	T 2D
200 C	T 3	T 3
180 C	—	T 3A
165 C	—	T 3B
160 C	—	T 3C
135 C	T 4	T 4
120 C	—	T 4A
100 C	T 5	T 5
85 C	T 6	T 6

Notes: 1) Group 1 of the IEC & Cenelec Codes is for mining (underground locations) This application does not fall within the scope of the NEC & CEC.

2) The NEC has 14 levels for surface temperature whereby the IEC & Cenelec has only 6.

Class II & Class III

Hazardous Locations due to flammable substances such as dust or powders (Class II) and fibers. (Class III) is handled the same way in both Canada and the U.S.

by using the Class and Division method. The type of dust is also a factor. The IEC uses the zone method, which is based on how often the

hazard is present. The type of dust or powder is not a consideration nor are fibers treated as a separate hazard.

The Hazardous Location for Dust, Powders and Fibers can be summarized as per Table 2

Table 2 :
HAZARDOUS LOCATION CLASSIFICATIONS

CLASSIFICATION	IEC, CENELEC CODES	NEC 500, CEC CODES
MATERIAL PRESENCE		
Continuously Present	Zone 20	Division 1
Intermittently present	Zone 21	Division 1
Abnormally Present	Zone 22	Division 2
APPARATUS DUST & POWDERS		
Metal	—	Class II / Group E
Coal	Group II	Class II / Group F
Grain	Zones 20,21,22	Class II / Group G
Fibers (all)	—	Class III

Data subject to change without notice.

Classification of hazardous locations

<p><u>Methods of Protection</u> There are generally three methods of protection that are used to reduce the risk of explosion.</p>	<p>Guidelines for using the most popular Methods of Hazardous Protection</p>		<p><u>Intrinsic Method</u> This method of protection has three levels. They are: " ia ", " ib ", " ic ". The " ia " being the highest level.</p>
<p><u>Prevention</u> This is a method that limits both the electrical and thermal energy to safe levels under both normal operation and fault conditions. Intrinsic safety is the most representative choice for this method.</p>	<p><u>The first step</u> is to know the classification of the hazardous area under consideration. Almost every type of area has already been classified by the various governing bodies.</p>	<p><u>The second step</u> is to choose the various types of equipment along with the method of protection that is suitable for the intended hazardous location.</p>	<p><u>" ia "</u> intrinsic safety system offers the highest level of protection of all other protection methods. It is the safest method of protection for Zone 0 applications. That is all applications whereby there is a continuous hazardous presence. Some applications of Division 1 fall into this category.</p>
<p><u>Segregation</u> This method attempts to physically separate or isolate the electrical parts or hot surfaces from the explosive mixture. This method includes several different techniques such as purge & pressurization, Encapsulation, etc.</p>	<p>* Notice that every piece of equipment or method of protection that is available to increase the safety in a hazardous location should have an applicable certification indicating the Class, Group, Division or Zone to which the product has been certified to. If a product has been certified to a certain standard of protection it can then be used in any standard that requires a lesser degree of protection.</p>		<p><u>" ib "</u> intrinsic safety system offers protection for Zone 1 applications. That is all applications whereby there is intermittent hazardous presence. Some applications of Division 1 fall into this category.</p>
<p><u>Explosion containment</u> This is the only method that allows the explosion to occur, but confines it to a well defined area, thus avoiding it spreading to the surrounding atmosphere. Explosion-proof enclosures are based on this method. Example NEMA 7 type enclosures.</p>			<p><u>" ic "</u> intrinsic safety system offers protection for Zone 2 applications. That is all applications whereby it is abnormal for a hazard to be present. Applications of Division 2 fall into this category.</p>

Data subject to change without notice.

Classification of hazardous locations

Purge & Pressurization Method

North America has standardized on three levels of protection for Purge and Pressurization methods. They are Type X, Y & Z. The Type X offering the highest level of protection. The European standards have been revised to include three new protection methods of px, py, and pz. These methods are similar to the North American counterparts. Purge / Pressurization systems allow the use of general purpose enclosures in hazardous locations as an alternative to NEMA Type 7 or 9 enclosures or those rated for zone classification. The NFPA 496 recognizes these three type of purge systems for Class I locations where hazards are continually present: types X, Y, and Z.

Type " X " purging reduces the area classification inside the enclosure from Division 1 to non hazardous. Type X purging requires that if the enclosure pressure is lost, the electrical supply is automatically disconnected on loss of purge pressure and a re-purge is required before the electrical supply is restored. General purpose equipment can be operated within the protected enclosure. These type X systems could be applied in Class I Division 1, Zone 1 and Zone 21 applications.

Type " Y " purging reduces the area classification inside the enclosure from Division 1 to Division 2. Type Y purging does not require electrical supply disconnection upon loss of pressure but the equipment in the purged enclosure must be suitable for Division 2. The type Y systems could be applied in Class I Division 1, Zone 1 and Zone 21 applications.

Type " Z " purging reduces the

area classification inside the enclosure from Division 2 to non-hazardous. Type Z purging, because of the lower level risk in Division 2, requires only an indication of loss purged pressure. General purpose equipment can be operated within the protected enclosure. The type Z systems could be applied to Class I division 2, Zone 2 and Zone 22 applications.

Notes:

1) There are strict guidelines regarding the sequence of operation that must be performed upon initial start up and subsequent restarting for each type of purge/pressurizing system.

2) All three types of purging are commercially available as pre-packaged kits.

Explosion Containment

An Explosion Proof (or Flame Proof, as classified in IEC and Cenelec standards) device is an electrical device designed with an enclosure capable of withstanding, without damage, an explosion within it of a specific gas, fiber or dust. In addition, it prevents ignition of these same materials surrounding the enclosure by a spark or flame from the explosion within. The material used to build the explosion proof enclosure is generally metallic (aluminum, cast iron, welded

steel, etc.) Plastic or non-metallic materials can be used for enclosures with a small internal volume of less than 3 cu. Dm.

The NEC approach is to use NEMA rated enclosures.

NEMA 7 These enclosures are classified for Class I Division 1 applications.

NEMA 9 These enclosures are constructed for indoor use in hazardous locations. They are classified for Class I, Division 1, Groups E, F, or G as defined by NFPA 70.

The IEC and Cenelec follow a different approach.

They follow the ATEX Directive 94/9/EC and the harmonized standard EN 60079-1. This standard applies to explosive atmospheres. It covers equipment protected by flameproof enclosures " d ".

Ex " d " An enclosure with this rating are for use in Zones 1 and Zone 2.

- A sample rating of IEC application would be Ex d IIC T6.
- A sample rating of Cenelec application would be EEx d IIC T6.
- **The Ex & Eex** indicate that it is explosion protected.
- **The " d "** indicates the method of protection, in the case it is by a flameproof enclosure.
- **The IIC** indicates the gas group, in this case it is Acetylene.
- **The T6** Indicates the maximum surface temperature, which in this case is 85 C.

Data subject to change without notice.

Arc Flash considerations

DEFINITION

Arc Flash is a short circuit that flashes from one exposed live conductor to another, or to ground. The air immediately surrounding the short circuit can ionize. The resulting ionized air can create electrically conductive superheated plasma that can reach temperatures of 5000° F. The explosion takes less than one second and produces a brilliant flash, intense heat and a strong pressure blast.

HOW AND WHEN DOES IT OCCUR

Arc Flash usually occurs while electrical equipment is being disconnected, inspected or serviced. It can be caused by a varieties of factors such as:

- 1) Accidental contact with live parts
- 2) Coming close to a high-amp source with a conductive object can cause the electricity, to flash over
- 3) Breaks or gaps in insulation or buildup on electrical terminals.
- 4) Dust, corrosion, presence of fumes, chemical vapors or other impurities that reduce the breakdown voltage of the air
- 5) Over voltage conditions
- 6) Equipment failure due to the use of substandard parts, improper installation, or even normal wear and tear
- 7) Sparks generated from racking in breakers, replacing fuses, or even from dropped tools

Note: Arc flash in a panel cannot occur once all electrical

power is disconnected. This is accomplished by disconnecting the remote disconnect that feeds the panel, as the panel disconnect does not kill the power to the line side of the panel disconnect.

The NFPA 70E Standard provides assistance in determining severity of potential exposure, planning safe work practices, and selecting personal protective equipment. The IEEE has developed Standard 1584 Guide for Per-

Electrical Arc

GENERAL BACKGROUND INFORMATION ON ARC FLASH

The frequency of accidents and serious injuries resulting from Arc Flash had become too serious to ignore. Since 2002 many organizations have been developing rules and regulations to deal with the potential dangers of Arc Flash. These organizations are :

National Fire Protection Association (NFPA)

The Occupational Safety and Health Administration (OSHA)
The National Electrical Code (NEC)

The Institute of Electric and Electronic Engineers (IEEE)
The NFPA 70E - 2004, which is a Standard for Electrical Safety in the Workplace, has become the norm and it has been adopted by NEC & OSHA.

forming Arc Flash Calculations. Arc Flash is defined as incident energy impressed on a surface, a certain distance from a source, generated during an electrical arc event and it is measured in calories per centimeter squared (cal / cm²) OSHA 29 CFR 1910.331-.335, Electrical Safety-Related Work Practices is the main defining requirements for protecting workers who may be exposed to electrical hazards. In enforcing worker safety procedures, OSHA cites the NFPA 70E standard as the "how to" source for compliance. OSHA is now citing and fining employers for failure to protect employees from the dangers of Arc Flash.

Data subject to change without notice.

Arc Flash considerations

HAZARDOUS CATEGORIES OF ARC FLASH

The NFPA 70E 2004 edition "Standard for Electrical Safety Requirements for Employee Workplaces" has a reference : Table 130.7 (C) (9) (a). This table can be found on their website at www.nfpa.org. The table lists a number of typical electrical tasks at various voltage levels and recommends the category of Personal Protection Equipment (PPE) that should be worn.

Category 0

has minimal PPE and no minimum arc rating

Category 1

requires Fire Resistant shirts and pants, hard hat, Safety Glasses, leather gloves and shoes. The minimum arc rating is 4 cal/cm²

Category 2

requires all items of category 1 plus cotton underwear, Arc Rated Face Shield and hearing protection. The minimum arc rating is 8 cal/cm²

Category 3

requires all items of category 2 plus fire resistant coveralls and a Flash Suit Hood. The minimum arc rating is 25 cal/cm²

Category 4

requires all items of category 3 except the Flash Suit must be a Full Flash Suit with Hood. The minimum arc rating is 40 cal/cm²

To put things in perspective:

An Arc Flash of 1.2 cal/cm² can produce second-degree burns. The NFPA requires that workers wear PPE when working at 50 Volts and more Arc Flash levels above 40 cal/cm² can be fatal and wearing proper PPE is now mandatory. Arc Flash levels can

go up to 100 cal/cm² and more

In general, arc flash incidents are highly improbable on systems operating at less than 208 volts phase to phase (120V to ground) when fed by less than a 125 KVA transformer. 120V does not provide sufficient energy to cause an arc flash hazard. Most 480V electrical services have sufficient capacity to cause an arc flash hazard. Medium-voltage equipment (above 600V) is higher energy and therefore a higher potential for arc flash hazard.

Flash Protection Boundary:	2.9 ft
Incident Energy:	23,3 Cal/cm ²
Working Distance:	18 in
Required PPE Level:	1
Shock Hazard Voltage:	3450 VAC
Limited Approach:	10,0 ft
Restricted Approach:	2,2 ft
Prohibited Approach:	0,6 ft

HOW TO DEAL WITH ARC FLASH

1) Labeling

Protecting personnel against Arc Flash Hazards is a relatively new phenomenon. The rules and regulations are in a state of transition. At present the National Electrical Code (NEC) requires that electrical control panels that might generate arc flash carry a permanent label supplied by the panel builder, although the labeling requirement is the responsibility

of the employer, not the manufacturer or installer of the equipment. The wording or symbols on these labels at present are just a warning of a potential arc flash. Future labels will most likely require the category along with the PPE requirements. Sample Arc Flash Label Indicating Category 1. The category can be obtained by the NFPA typical tasks or by getting an arc flash analysis as listed below.

2) Arc flash analysis

A critical element of compliance with electrical safety standards requires building owners and management to complete a flash hazard analysis on the facilities electrical distribution system. These engineering studies are quite complex and often require the services of outside personnel. The Analysis Should:

- Establish the Arc Flash Hazard risk category
- Determine the clothing and equipment to suit the risk category
- Identify what arc thermal performance value (ATPV) rating is necessary
- Select PPE that meets or exceeds the designated ATPV rating.

Data subject to change without notice.

Arc Flash considerations

HOW TO REDUCE THE RISK OF ARC FLASH

There are three key factors that determine the Arc Flash event on personnel. These factors are the quantity of fault current available in the system, the time fault until the arc flash is cleared and the distance an individual is from the arc. The main objective is to design and configure equipment in ways that minimize these factors and in turn reduce the Arc Flash Hazard.

1) Fault Current

The fault current can be reduced by using current limiting devices such as grounding resistors or fuses. If the fault current is limited to 5 amps or less, then many ground faults self-extinguish and do not continue into phase-to-phase faults.

2) Arcing Time

Arcing time can be reduced by temporarily setting upstream protective devices to lower setpoints during maintenance periods or by employing zone interlocking.

3) Distance

The main objective is to be able to minimize the number of times one has to access a control panel during a time when power is still required to keep equipment running. Providing remote operators or plug-ins that can allow operators to change settings or monitor performance without opening the enclosure is one method. Robots are also being used to perform activities that are high risk for Arc Flash, such as racking breakers on a live electrical bus. Another consideration is to have the drawing pocket mounted on the outside of the panel. The distance

from an arc flash source within which an unprotected person has a 50% chance of receiving second degree burns is referred to as the "flash protection boundary". Those conducting flash hazard analyses must consider this boundary, and then must determine what PPE should be worn within the flash protection boundary.

RESEARCH

There is ongoing research being done on the topic of Arc Flash by all organizations that are involved in improving electrical safety standards. Arc Flash is a relatively new topic and the standards that presently exist will most likely be reviewed and improved in the near future.

Flash protection boundary:
An approach limit at a distance from exposed live parts within which a person could receive a second degree burn if an electric arc flash were to occur (NFPA 70E).

Seismic consideration (Canada)

Although earthquakes can occur anywhere in the world, certain areas have a higher probability of experiencing damaging ground motion caused by earthquakes.

In areas where earthquakes are highly probable, enclosures can be provided with additional stiffening and hold down bracing in order to meet various seismic ratings.

In order to assist in the necessity of providing features over and above our standard design, we have provided seismic information for North America.

A simplified version of the seismic hazard map of Canada is shown below. The 5 colors in the simplified map are not intended to represent building code zones, they merely show the relative hazard across the country.

In Canada the Natural Resources Canada no longer assign Zones to seismic hazard. Since 2005 they have provided site specific spectral and peak acceleration values for all locations in Canada. Information on the National Building Code of Canada (NBCC) seismic hazard maps can be found in the earthquake hazard section of the website at:

<http://earthquakescanada.nrcan.gc.ca/index-en.php>

Seismic consideration (U.S.)

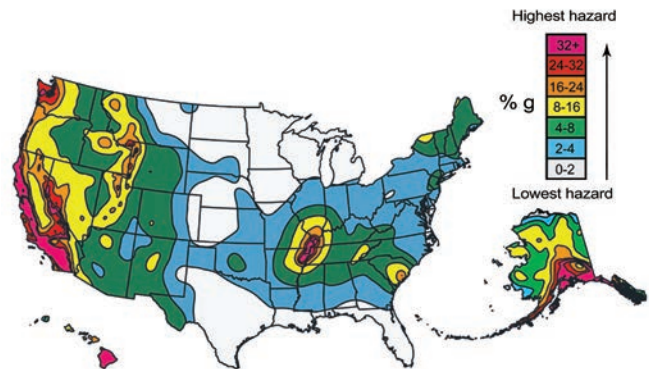

The U.S. Geological Survey (USGS) produces the National Seismic Hazards Maps. These maps are revised every 6 years or so to reflect newly published or thoroughly reviewed earthquake science and to keep pace with regular updates of the building code.

The latest update of this map was in 2008 and it supersedes all previous maps. A copy of this map is shown below.

Colors on this map show the levels of horizontal shaking that have a 2-100 chance of being exceeded in a 50 year period. Shaking is expressed as a percentage of g (g is the acceleration of a following object due to gravity). (Credit image courtesy of the U.S. Geological Survey). This USGS seismic map is the basis for seismic design provisions of building codes, insurance rate structures, earthquake loss studies, retrofit priorities, and land-use planning.

The web site for the USGS is:

<http://earthquake.usgs.gov/research/hazmaps/>

Squaring floor mounting stands on single doors

The EXM wall mounted enclosures may be installed with floor stands on surfaces that need to be rigid and straight. After installation if the door doesn't line up with the box due to an uneven surface, spacers have to be applied according to the figures. When the door appears to drop, spacers must be applied to **the front of the floor stand on the hinged side**. For the contrary, the spacers must be applied to **the back of the floor stand on the hinged side**. The alignment of the door with the box is very important to maintain a good contact with the gasket and keep the integrity of the enclosure.

Squaring floor mounting stands on double doors

The EXM double door wall mounted enclosures may be installed with floor stands on surfaces that need to be rigid and straight. After installation if the doors don't line up with the box due to an uneven surface, spacers have to be applied according to the figures. When the right door appears to drop, spacers must be applied to the **front of the floor stand on the right door side**. For the contrary, the spacers must be applied to the **front of the floor stand on the left door side**. The alignment of the door with the box is very important to maintain a good contact with the gasket and keep the integrity of the enclosure.

Data subject to
change without
notice.

Squaring wall mounted enclosures

The EXM wall mounted enclosures are manufactured to be installed on walls, struts or machine surfaces that need to be rigid and straight. After installation if the door doesn't line up with the box due to an uneven surface, spacers have to be applied according to the figures. When the door appears to drop, spacers must be applied to the back of the enclosure on the **bottom hinged side**. For the contrary, the spacers must be applied to the back of the enclosure on the **bottom lock side**. The alignment of the door with the box is very important to maintain a good contact with the gasket and keep the integrity of the enclosure.

Squaring plinths

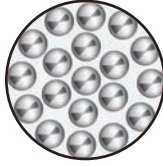

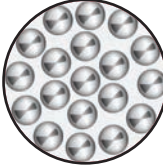

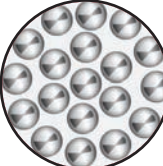

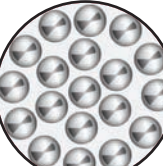

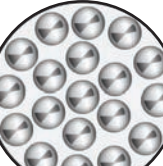

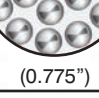

The EXM wall mounted enclosures may be installed with a plinth on surfaces that need to be rigid and straight. After installation, if the door doesn't line up with the box due to an uneven surface, spacers have to be applied according to the figures. When the door appears to drop, spacers must be applied to the **front of the plinth on the hinged side**. For the contrary, the spacers must be applied to the **back of the plinth on the hinged side**. The alignment of the door with the box is very important to maintain a good contact with the gasket and keep the integrity of the enclosure.

Wireways/Raceways regulation and fill tables

CSA Limits the Fill and Type of Wires as per the following sections in the Canadian Electrical Code C22.1-06 Part 1 Edition 20

Section 12-2104 Conductors in Wireways

(1) conductors used in wireways shall be the insulated types indicated in Table 19 as being suitable for use in raceways.

(2) except as permitted in subrule 4 wireways shall contain no more than 200 conductors and the aggregate cross-section area of the conductors and their insulation shall not exceed 20% of the interior cross-sectional area of the wireway

(3) no conductor larger than 500 kcmil copper and 750 kcmil aluminum shall be installed in any wireway

(4) wireways containing only signal and control conductors shall be permitted to contain any number of conductors, but the aggregate cross-sectional area of the

conductors and their insulation shall not exceed 40% of the cross-sectional area of the wireway

(5) the cross-sectional area for conductors in Subrules (2) & (4) shall be determined in accordance with Rule 12-1014 (4)

Rule 12-1014 Subsection 4

The maximum number of conductors or multi-conductors cables in one conduit shall be such that the conductors or cables and their coverings will not result in a greater conduit fill than that specified in Table 8 and in this determination

(a) the interior cross-sectional area of various sizes of conduit shall be those specified in Table 9

(b) not with standing the requirements of Item (a). the interior

resulting cross-section of raceways shall be permitted to be derived from their measured internal dimensions or from manufacturer's listed specifications.

(c) the diameters and cross-sectional areas of single-conductors bare and insulated wires and multi-conductor cables shall be obtained by measurement; and

(d) not with standing the requirements of Item (c) the dimensions of single conductor wires shall be permitted to be obtained from Table 10 for the construction listed therein.

THE ABOVE ARE REPRINTS FROM CANADIAN ELECTRICAL CODE

Note: kcmil is the same as MCM

Data subject to change without notice.

The 2008 National Electrical Code limits wireways as follows

A wireway shall not contain more than 30 current-carrying conductors except when the ampacity has been adjusted to Table 310-15(b) 2 (a) The sum of the cross sectional area of all conductors shall not exceed 20% of the interior cross sectional area of the wireway.

Note section 14 of NTPA 79 allows 50% fill for industrial machine wireway.

* Types RHH, RHW, and RHW-2 without outer covering

Data subject to
change without

The 2008 National Electrical Code limits wireways as follows

A wireway shall not contain more than 30 current-carrying conductors except when the ampacity has been adjusted to Table 310-15(b) 2 (a) The sum of the cross sectional area of all conductors shall not exceed 20% of the interior cross sectional area of the wireway.

Note section 14 of NTPA 79 allows 50% fill for industrial machine wireway.

* Types RHH, RHW, and RHW-2 without outer covering

HOW PROTECTIVE COATINGS WORK

The information provided herein is fundamental to an understanding of the conditions that cause corrosion.

Destruction of metals by corrosion takes many forms, depending on the nature of the metal alloy; the presence of metal occlusions or other foreign matter at the surface; the homogeneity of its structure; the nature of the corrosive medium; the incidental environmental factors such as the presence of moisture, oxygen, salts and minerals, temperature; and other factors such as stress; oxide scale; porous or semi-porous deposits on the surfaces, built-in crevices, welds, galvanic effects of dissimilar metals; and the occasional presence of stray electrical currents.

Corrosion of metals protected by single coat thin film (<.005") protective barrier of organic coatings are not uncommon in outdoor weather environments. Corrosion of metals protected by single coat organic finishes are more often a result of localized corrosion in areas where the protective coating is breached, areas of thin coverage, or sharp edges. This type of general corrosion will typically manifest itself in the form of light surface corrosion, and attack the metal where protective coatings are thin such as sharp edges or areas where the coating has been breached.

Severe corrosion and adhesion loss is more common in cases where the protective coating was applied over contamination caused by inferior substrates, anomalies in the pretreatment processing, or inferior design and fabrication that causes variations in the adhesion properties and protective value of the finishing system. This type of corrosion typically manifests itself in the form of osmotic blistering. Osmotic blistering in specific areas or specific surfaces causing pattern failure areas typically pretreatment process related.

All metals will corrode predictably when the substrate metal surface is exposed to the conditions that promote and excel corrosion. The fact is, if it is made from metal, corrosion will occur. Corrosion of organically coated metals with a single coat application will occur over time depending on the quality and type of the metal substrate, pretreatment process and controls, top coat chemistry, and the severity of external environmental stresses.

Automobiles corrode, water heaters corrode, lawn furniture corrodes, metal ships and bridges will corrode. All corrosion is not the same. Therefore, the reason why such a varied selection of materials degrades in certain environments are also enumerated, along with the various mechanisms of the attack experienced.

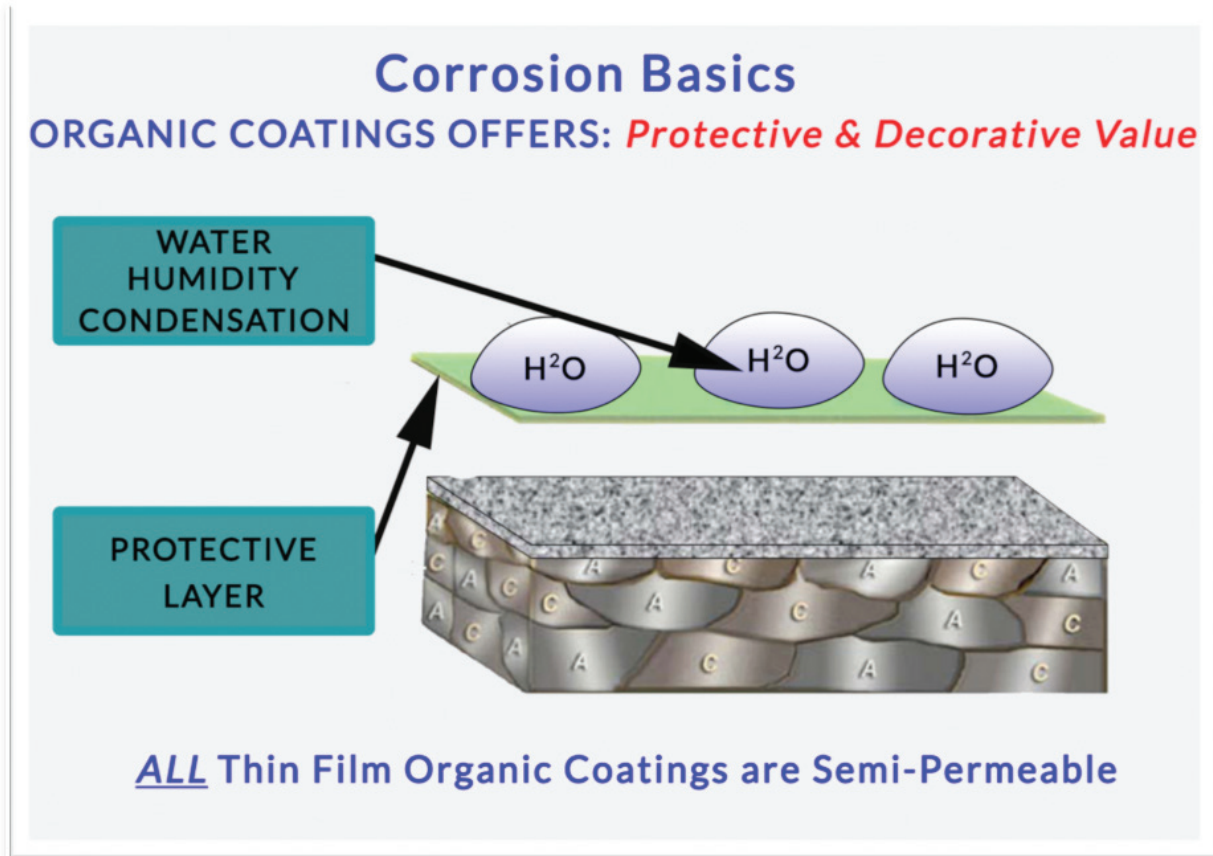

To understand how coatings fail, one must first understand what makes organic coatings work. Why do coatings work? In broad terms, they work because they are applied evenly at the proper thickness, adhere well to the substrate, have good adhesive and cohesive strength and integrity, resist weathering and chemical deterioration, and impede the permeability of harmful corrosive agents.

HOW PROTECTIVE COATINGS WORK

Protective Organic Coating Function

The function of a protective organic coating is to separate two highly reactive materials; that is, to prevent liquids, solids, chemicals, minerals, or gases from contacting the reactive underlying metal substrate by the creation of a protective barrier that is intimately bonded to the substrate material. Organic coatings act as a barrier to separate the corrosive effects of the atmospheric environment from the metal substrate. This physical separation of the atmosphere and the substrate is extremely important.

CORROSION CELL FORMATION

Corrosion is an electrochemical process in which a metal reacts with its environment to form an oxide or other compound. The cell which causes this corrosion process has four essential constituents: an anode, a cathode and an electrolyte (electrically conducting solution), and the conductive surface (the metal surface). The anode is the site at which the metal is corroded; the electrolyte is the corrosive medium; and the cathode forms the other electrode in the cell and is not consumed in the corro-

sion process. At the anode the corroding metal passes into the electrolyte as positively charged ions, releasing electrons which participate in the cathodic reaction. Hence the corrosion current between anode and the cathode consists of electrons flowing within the metal and ions flowing within the electrolyte. In the battery cell example shown above the electrolyte serves as the conductor as well. In metal substrate corrosion the electrolyte (typically water) reacts with the metal conductor.

Data subject to
change without
notice.

HOW PROTECTIVE COATINGS WORK

The conditions that cause corrosion to happen are well known. The conditions, materials, and processing methods required to prevent corrosion (a natural phenomenon) from occurring on common metals surfaces used in today's construction are also well known. The substrate materials selection, products design, preparation process, finishing materials, and application process as well as the climate conditions during finishing are all important considerations that can, and will affect the service life of any organic coating.

BREACH of the PROTECTIVE COATING

When the organic finish (Protective Layer) is breached through to the ferrous metal substrate, moisture, air, minerals, and surface contaminants, combine to create electrolytes allowing electrical current to flow by the movement and discharge of ions according to the Faraday's law of electrolysis. Moisture (electrolytes) will immediately penetrate any breach in the coating surface. As the coating is lifted by the growth of corrosion undercutting, a greater amount of moisture is trapped beneath the coating barrier and will prolong the electrolysis process thus accelerating corrosion reaction.

HOW PROTECTIVE COATINGS WORK

BARRIER PROTECTION

Organic coatings retard corrosion by Anodic reaction suppression. Anodic reaction suppression is the basis for most corrosion protection coatings on metal substrates. The protective barrier is provided by the combination of a quality pretreatment process and the organic finish that is designed to prevent the electrolyte (typically water) from reaching the metal surface (the conductor) causing corrosion cell formation.

**ORGANIC COATING PROTECTIVE BARRIER
A,B,C's
Of
PERFORMANCE COATINGS**

- A. Clean Metal Substrate
- B. Chemical Conversion Coating Pretreatment Process
- C. Quality Protective Coating Layer

The components of a good quality finish consist of the combination of (A) a clean metal substrate, (B) a good quality chemical conversion coating pretreatment process, and (C) a quality protective coating layer that will exhibit good adhesion and cohesion properties to prevent moisture penetration through to the substrate metal.

Unfortunately the protective value of a coating is not visibly identifiable and requires a good deal of performance testing to determine the best finishing specification for the intended use of the product. The addition of a primer coating is always a good option to consider when superior long term corrosion protection is required.

Single coat organic coatings are semi-permeable membranes . A semi- permeable membrane by definition is a membrane that will allow certain molecules to pass into and sometime through it by diffusion. Reference illustrations A-D below.

Data subject to

HOW PROTECTIVE COATINGS WORK

THIN FILM SEMI-PERMEABLE ORGANIC COATING LAYER = / < .005"

A. The barrier protective value of the coated metal substrate is determined by the quality of the pretreatment process, the coatings chemical make up, thickness, adhesion, and cohesion properties.

B. Time Of Wetness (TOW) Moisture (H₂O) on the surface of the coating caused by humidity, precipitation, or other wet sources.

C. Electrolyte Penetration
Water molecules permeate into the coating to various degrees depending on the TOW and surface finish matrix. As the coating membrane respire during climatic changes causes water (electrolyte) exposure to the pretreated metal. If the pretreatment is proper corrosion cells will not form.

D. Corrosion Cell Formation If preexisting corrosion or contamination is present, or if dried on salts from pretreatment chemicals or poor quality rinse stages are allowed to accumulate under the coating at the surface interface, corrosion cells can be formed by hydration during respiration cycles and the electrolyte, the conductor, the anodes and cathodes react to cause the redox reaction beneath the coating at the metal surface interface.

As the corrosion cells continue to form and grow over time, pressure is created between the organic coating and the substrate causing the coating to lift in the form corrosion blistering. (Osmotic Blistering)

REPAIR GUIDELINES & PREVENTIVE MAINTENANCE

Suggested Repair Procedure:

Safety:

Wear personal protective equipment as necessary. Safety Glasses, Face Shield, Hard hat, Gloves, Respirator, Tyvek suit, ect.

1. Pretreatment Mechanical Preparation:

Method(s): Hand Sand, or Hand Tool Prep: orbital sander, grinder Material(s): Use fine grade 120-360 grit abrasive paper to remove corrosion products and any non-adherent coating.

2. Pretreatment Chemical Cleaning & Conversion Coating:

Method(s): Wipe with approved cleaning solvent and tack free rags. Material(s): Cleaning Solvent (Dupont Metal Conditioner CF-5717S or equivalent, Reference appendix for material data sheet) Phosphate Conversion Coating, Tack Free rags

3. Drying:

Method(s): Air dry or force dry to remove all moisture from the surface. Material(s): Air dry, Fan, or Heat Gun if necessary.

4. Primer Application:

With a fine brush, roller, or aerosol spray apply a complete layer of protective primer and allow to dry in accordance with primer paint supplier's written instructions. (Polyurethane or Epoxy Primer) Method(s): Brush-on, Roll-on or Spray-on Material(s): Appropriate Primer Material, Brush, Aerosol Can, roller or Air compressor & paint gun

5. Top Coat Application:

With a fine brush, roller, or aerosol spray, apply a complete layer of protective top coat finish and allow to dry in accordance with paint suppliers written instructions.

Method(s): Brush-on Roll-on, or Spray-on Material(s): Top Coat liquid finishing material, Brush, Aerosol Can, roller or Air compressor & paint gun

Note: It should be recognized that the primer/top-coat liquid paint repair system will not possess the same weathering properties in terms of color and gloss retention as the oven cured organic powder coating, but will provide a reasonable amount of long term corrosion protection if applied properly.

Preventive Maintenance Program

A properly implemented corrosion control program will disclose corrosion attack in the early stages. Minor maintenance can correct such corrosion. «Preventive maintenance is the most cost-effective method of controlling corrosion.»

Preventive maintenance as related to corrosion control includes the following specific functions:

1. An adequate cleaning program.
2. Detailed scheduled inspection of the facility and systems for corrosion and failure of protective coating systems.
3. Prompt treatment of damaged coating areas.
4. Use of supplementary preservative coatings as necessary.
5. Adequate drainage of moisture entrapment areas.

«This can be obtained by installing the enclosure at a slight angle in order to facilitate the evacuation of water by natural gravity»

6. Periodic removal of accumulated pollution and other foreign matter.
7. Condition exposed critical surfaces with preservative compounds such as polymer wax products as necessary to protect the finish from the harmful effects of ultra-violet light if color and gloss retention is important.
8. Document all preventive maintenance activity including date, time, procedure, chemicals used, and weather conditions. Failure to properly document these critical details may void any expressed or implied warranty.

Data subject to change without notice.

HOW PROTECTIVE COATINGS WORK

ISO 12944 Environmental Exposure Classification

The environmental corrosion classifications C - 1 to C5M as shown in the table below represent the general guidelines of ISO 12944. This classification relates to the environmental exposure of organically coated products during their expected service life.

The ISO 12944 standard is intended to assist engineers and corrosion experts in adopting best practice in corrosion protection of steel at new construction sites. ISO 12944 is progressively superseding regional standards to become a truly global benchmark in corrosion control.

Understanding the ISO environment can help to tailor specifications, ensuring that the select coatings and processing methods are not under or over specified thus saving unnecessary cost.

Corrosive Category	Rating	Typical Environments
C1	Very Low	Indoor Climate Controlled – Clean Atmospheres
C2	Low	Rural Areas, Low Pollution, Neutral Atmospheres
C3	Medium	Urban and Industrial atmospheres Moderate Sulfur dioxide levels Production areas with High Humidity
C4	High	Industrial & Coastal Areas Chemical Processing Plants
C5I	Very High	Industrial Areas With High Humidity Aggressive Atmospheres
C5M	Very High	Marine, Offshore, Coastal Areas with High Salinity

TECHNICAL DATA

Modified powder paint coatings color chart

EXM uses heat fused PE series modified powder paint, electrostatically applied on a pretreated base. In this process, the paint particles are charged with static electricity and are sprayed on the enclosures which are grounded, this causes the particles to adhere evenly to the surface of the enclosure, eliminating the possibility of having paint runs. Curing temperature and time is approximate-

ly 200°C for 20 minutes.

Enclosures can be customized using any color from the color chart below. The modified polyester finish was chosen because of its excellent life span in acidic atmospheres and for its ability to be repainted. The following types of top coatings can be applied over our modified polyester finish :

1. Acrylic Urethane (2 components)

2. Polyurethane (2 components)

3. Epoxies (2 components)

4. Alkyd, medium oil (linseed, soya)

We recommend the above types of top coating to achieve a high quality finish with good adhesion with no prior sanding or treatment.

Fast dry short oil alkyds or chain stopped alkyds are not recommended.

Standard gauge equivalency

Hot or cold rolled steel gauge	Equivalent thickness in inches	Equivalent thickness in millimeters
7 gauge	~ 0.179	~ 4.547
8 gauge	~ 0.164	~ 4.166
9 gauge	~ 0.150	~ 3.810
10 gauge	~ 0.134	~ 3.404
11 gauge	~ 0.120	~ 3.048
12 gauge	~ 0.105	~ 2.667
13 gauge	~ 0.090	~ 2.286
14 gauge	~ 0.075	~ 1.905
15 gauge	~ 0.067	~ 1.702
16 gauge	~ 0.060	~ 1.524
17 gauge	~ 0.054	~ 1.372
18 gauge	~ 0.048	~ 1.219
19 gauge	~ 0.042	~ 1.067
20 gauge	~ 0.036	~ 0.914
21 gauge	~ 0.033	~ 0.838
22 gauge	~ 0.030	~ 0.762

Determine the right heater size for your needs

For outdoor applications, it is recommended to double the heating power.

This formula is supplied for reference purposes only. EXM offers no warranty, expressed nor implied, as to the application of this table in different environments, as the equipment may be subjected to conditions out of our control.

Wattage selection

The wattage requirement is determined from a consideration of the surface area, insulation properties of the enclosure, the temperature difference between the ambient and the enclosure and the heating power generated by existing components (e.g. transformer). The following formula can generally be used to calculate wattage requirements for uninsulated enclosures :

$$P_h = (A \times \Delta T \times k) - P_v$$

P_h = Required heating power for your application in Watts (W)

P_v = Heating power generated by existing components in Watts

A = Exposed enclosure surface area in square meters (m²)

ΔT = Temperature differential between the desired minimum interior temperature and the lowest possible external temperature of the enclosure in Kelvin (K). 1.8°F = 1°C = 1K

k = Heat transmission coefficient of the enclosure material used :

Painted steel : 5.5W/m²K

Stainless steel : 3.7W/m²K

Aluminum : 12W/m²K

Plastic : 3.5W/m²K

Understanding EXM's numbering system

5412 ESCH060604

a. b. c. d. e. f. g.

- a.** The first number indicates the product's category
- 1 denotes a small (usually commercial) enclosure
 - 2 denotes a PC cabinet or console
 - 5 denotes a larger industrial enclosure
 - 6 denotes a metric European styling enclosure or modular cabinet
 - 8 denotes an accessory
- b.** The next three numbers indicate the product's NEMA rating
- 100 denotes NEMA 1 (for use indoors)
 - 300 denotes NEMA 3/3R (for use outdoors, weatherproof)
 - 500 denotes NEMA 12/13 (for use indoors, oil and dust tight)
 - 412 denotes NEMA 4 or 4X (for use outdoors, water, oil and dust tight)
- c.** The first letters indicate the series type and material
- ES denotes a powder coated steel enclosure (EuroStyle)
 - ESS denotes a brushed stainless steel enclosure (EuroStyle)
 - ESSP denotes a powder coated stainless steel enclosure (EuroStyle)
 - EAL denotes a powder coated aluminum enclosure (EuroStyle)
 - Other codes identify other series types.
- d.** The next letters indicate the model type
- CH denotes a continuous hinge enclosure (JIC type)
 - SC denotes a screw cover enclosure
 - DD denotes a double door enclosure
 - LC denotes a lift off cover enclosure
 - W denotes a windowed enclosure
 - FM denotes a flush mount enclosure
 - TB denotes a metric terminal box
- e.** Indicates the height for most enclosures. (Indicates width for metric enclosures.)
- f.** Indicates the width for most enclosures. (Indicates height for metric enclosures.)
- g.** Indicates the depth of the enclosure.
- h.** Some model numbers have a suffix to indicate a particular characteristic.
- 6 denotes a stainless steel Type 316 enclosure (standard is type 304)
 - B indicates a type '2B' finish for stainless steel enclosures or indicates beige powder coating for painted enclosures.
 - P indicates a powder coated stainless steel for stainless steel enclosures.
 - N indicates an enclosure without knockouts
 - SC denotes a screw cover enclosure

Some exceptions apply. Please contact EXM for details at 1-800-363-2423.

TECHNICAL DATA

Yes, we do custom enclosures and modified standards

Our automated manufacturing process allows us to produce custom enclosures and modified standards to your specifications with pin point accuracy and minimum lead time.

EXM can produce modified standards within record time.

Who says special enclosures have to be expensive? EXM custom orders are very competitively priced and can save you many labour hours.

EXM custom enclosures are manufactured with the same high quality standards as our stock products. Our modified standards and special products feature poured in place gaskets, superior hinging, quality bending and all of the features you've come to expect from EXM.

EXM is a complete solution. We can install a wide range of accessories to your specifications. Environment control products, special locks and inserts, lighting, windows, DIN rails and more can be factory installed.

NEMA 6P ENCLOSURE RATING

Definition

Intended for indoor or outdoors where occasional temporary submersion is encountered.

Applications

NEMA 6P enclosures are constructed for either indoor or outdoor use to provide a degree of protection for the equipment inside the enclosure against ingress of solid foreign objects (falling dirt); to provide a degree of protection with respect to harmful effects on the equipment due to the ingress of water (hose directed water and the entry of water during occasional temporary submersion at a limited depth); that provides an additional level of protection against corrosion and that will be undamaged by the external formation of ice on the enclosure.

- **Constructed for either indoor or outdoor use.**
- **Provide a degree of protection for the equipment inside the enclosure against ingress of solid foreign objects (falling dirt).**
- **Provide a degree of protection with respect to harmful effects on the equipment due to the ingress of water (hose directed water and the entry of water during occasional temporary submersion at a limited depth).**
- **Undamaged by the external formation of ice on the enclosure.**

EXM on the Web

The screenshot shows the EXM website homepage. At the top, there is a navigation menu with links for HOME, PRODUCTS, SERVICES, DOWNLOADS, ABOUT US, and CONTACT US. Below the menu is a main banner with the heading "WHERE CUSTOM IS STANDARD" and a sub-headline "EXM has specialized in custom enclosures for over 40 years. We provide you and your projects with quality enclosures tailored to your specifications on time and all custom orders are produced as originals instead of modified standards." The banner features several images of custom enclosures in various colors and sizes. To the left of the images is a blue sidebar with the heading "BOXCAD" and the text "With BOXCAD you are no longer bound by the catalog standards" and a "SEE HOW" button. Below the banner is a section titled "FEATURED EXM PRODUCTS" with three columns: "5300 EST & 5300 ESTQT 5300 MC" (NEMA 3R enclosure), "HIGH QUALITY FIBERGLASS" (5412 ESFR series), and "EXM HARDWARE". To the right of this section is a "BOXNET Tutorial Overview" section. At the bottom of the page, there is a horizontal navigation bar with links for EXM BLAINVILLE, EXM EDWARDS, EXM MEADOWPINE, EXM MASSACHUSETTS, EXM TEXAS, and EXM CHINA. Below this is another navigation bar with links for BOXCAD, PRODUCTS, SERVICES, DOWNLOADS, ABOUT US, and CONTACT US.

POLICY

EXM, we care...

We guarantee that our products are free from defects in workmanship or material. We will replace or repair any EXM product which is deemed defective upon inspection by one of our technicians, within one year from the shipment date. This guarantee does not apply to products which were subject to abuse, mishandling, improper application, faulty installation or transport damage. We expressly disclaim any liability or guarantee except as provided by this statement.

We continually revise and improve our products. As a result the specifications contained in this catalog may be revised without notice. We suggest you contact us for current technical information if required.

We highly recommend that each user qualify the end use for each product purchased to ensure that the standards and rating are suitable for the final application. EXM will not be responsible for any application or installation of materials which exceed ratings for which they are certified.

The contents of this catalog are Copyright and may not be reproduced without the express written consent of EXM Manufacturing Ltd.

We stand behind all of our products, should you have any questions regarding the use of our products our sales and engineering staff will gladly answer your queries.

Please do not hesitate to write or call our sales office for further information.

Thank you
