HG2A and HG2C Series Operator Interfaces

IDEC Corporation officially announces the discontinuation of the HG2A and HG2C series of operator interfaces.

Effective immediately, IDEC will no longer accept orders for the HG2A or HG2C.

As a possible replacement, please look at the HG2F and HG2F-C operator interfaces. The HG2F series have been available since early 2002 and have a 256-color, full-function touchscreen with 192 touch regions. There are four available models with either a monochrome or color screen. Also, the HG2F-C comes with CC CLICK™ technology which provides tactile feedback to the user.

WindO/I-NV2 will still be available to configure and program IDEC's HG family of operator interfaces.

Please note that programs written for the HG2A or HG2C units will not work on the HG2F series.

On the reverse is a list of the discontinued part numbers and possible replacements.

For further information, please contact IDEC Technical Support at 1-800-262-IDEC (press 2).
