HS6B Subminiature Interlock Switches

Key features:

- Only 78 x 30 x 15mm
- Two actuator entrances provide flexibility for installation options
- Integrated molded cable reduces wiring time
- IP67 (IEC60529)
- Direct Opening Action
- Actuators comply with ISO14119 and EN1088

GS-ET-15
BG standard in Germany

Direct Opening
Action

Double
Insulation

Dimensions (mm) HS6B

Installation

The interlock switch can be mounted in two directions.

Using straight actuator (HS9Z-A61)

Using Right-angle actuator (HS9Z-A62)

Using Angle Adjustable Actuator (HS9Z-A65/A66)

Straight actuator (HS9Z-A61)

Right-angle actuator (HS9Z-A62)

Actuator Installation

Straight/Right-angle Actuator

Angle Adjustable Actuator

Adjustable Actuator (HS9Z-A65)

Horizontal Adjustment

Vertical Adjustment

The orientation of actuator adjustment (horizontal/vertical) can be changed using the orienting insert (white plastic) installed on the back of the actuator.

The base is made of glass-reinforced PA66 (66 nylon). Angle adjustment screws are stainless steel. When using adhesive on screws, take material compatibility into consideration.

Note 2: After mounting the actuator, remove the actuator stop from the interlock switch.

Adjustable Actuator (HS9Z-A66)

The HS9Z-A65 and HS9Z-A66 have the metal key inserted in opposite directions.

Horizontal Adjustment

Angle Adjustment
(M3 Hexagon Socket Head Screw)

Vertical Adjustment

Angle Adjustment
(M3 Hexagon Socket Head Screw)

Minimum Radius of Hinged Door

- When using the interlock switch for a hinged door, refer to the minimum radius of doors shown below. For doors with small minimum radius, use angle adjustable actuators (HS9Z-A65 or HS9Z-A66).

Note: Because deviation or dislocation of hinged door may occur in actual applications, make sure of the correct operation before installation.

HS9Z-A62 Actuator

- When the door hinge is on the extension line of the interlock switch surface:

- When the door hinge is on the extension line of the actuator mounting surface:

When using the HS9Z-A65/HS9Z-A66 Angle Adjustable (vertical) Actuator

- When the door hinge is on the extension line of the interlock switch surface:

- When the door hinge is on extension line of the actuator mounting surface:

Actuator Angle Adjustment for the HS9Z-A65/HS9Z-A66

- Using the angle adjustment screw, the actuator angle can be adjusted (see figures on page 370).
- Adjustable angle: 0 to 20°
- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening.
- After installing the actuator, open the door. Then adjust the actuator so that its edge can enter properly into the actuator entry slot of the interlock switch.
- After adjusting the actuator angle, apply Loctite to the adjustment screw so that the screw will not become loose.

HS5D Miniature Interlock Switches

Key features:

- Detects detachment of head for enhanced safety
- Compact dimensions with up to three contacts
- The head orientation can be rotated, allowing 8 different actuator entries
- NC contacts with direct opening action (IEC/EN60947-5-1)
- M3 terminal screws for easy wiring
- Gold-plated contacts suitable for small loads

**HS5D-□□RN□ (Plastic Head)
With HS9Z-A51 Straight Actuator**

With HS9Z-A52 Right-angle Actuator

Note: Plug the unused actuator insertion slot using the slot plug supplied with the safety interlock switch.

All dimensions in mm.

Actuator Dimensions Straight (HS9Z-A51)

Right-angle (HS9Z-A52)

Straight w/rubber bushing (HS9Z-A51A)

Right-angle w/rubber bushing (HS9Z-A52A)

Actuator Mounting Hole Layout (Straight, Right-angle)

Angle Adjustable (HS9Z-A55)

Actuator Mounting Hole Layout (Straight, Right-angle)

Note: The actuator stop is supplied with the actuator and used when adjusting the actuator position. Remove the actuator stop after the actuator position is determined.

Actuator Orientation (Angle Adjustable)

The angle of actuator swing can be changed using the orienting insert (white plastic) installed on the back of the actuator. Do not lose the orienting insert, otherwise the actuator will not operate properly.

The mounting center distance is set to 12 mm at factory. When 20-mm distance is required, adjust the distance by moving the rubber bushings.

(A)(B) The actuator has flexibility to the directions indicated by the arrows. When 20-mm distance is selected, the actuator swings vertically.

Actuator Mounting Hole Layout (Straight w/rubber bushing) (Right-angle w/rubber bushing)

*Mounting centers can be widened to 20 mm by moving the rubber cushions.

Actuator Mounting Reference Position

As shown in the figure below, the mounting reference position of the actuator when inserted in the interlock switch is where the actuator stop placed on the actuator lightly touches the interlock switch.

Note: After mounting the actuator, remove the actuator stop from the actuator.

Minimum Radius of Hinged Door

- When using the interlock switch for a hinged door, refer to the minimum radius of doors shown below. For the doors with small minimum radius, use angle adjustable actuators (HS9Z-A55).

Note: Because deviation or dislocation of hinged door may occur in actual applications, make sure of the correct operation before installation.

HS9Z-A52 Actuator

- When the door hinge is on the extension line of the interlock switch surface:

- When the door hinge is on the extension line of the actuator mounting surface:

When using the HS9Z-A55 Angle Adjustable Actuator

- When the door hinge is on the extension line of the interlock switch surface:

- When the door hinge is on extension line of the actuator mounting surface:

Actuator Angle Adjustment for the HS9Z-A55

- Using the angle adjustment screw, the actuator angle can be adjusted (see figures "Actuator Dimensions" on page 13). Adjustable angle: 0 to 20°
- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening. After installing the actuator, open the door. Then adjust the actuator so that its edge can be inserted properly into the actuator entry slot of the interlock switch.
- After adjusting the actuator angle, apply Loctite to the adjustment screw so that the screw will not loosen.

Instructions

Rotating the Head

- The head of the HS5D can be rotated by removing the four screws from the corners of the HS5D head and reinstalling the head in the desired orientation. When reinstalling the head, make sure that no foreign object enters the interlock switch. Tighten the screws tightly, because loose tightening may cause malfunction.
- Recommended screw tightening torque: 0.9 to 1.1 N·m

Head Removal Detection Function

Only the NC contact of the main circuit (11-12) turns OFF (open) when the head is removed, such as when rotating the head. Because NC contacts of other than the main circuit (11-12) turn ON (closed), be sure to connect the main circuit (11-12) to the safety circuit.

Recommended Tightening Torque

- Interlock Switch Mounting Screw: 1.8 ± 2.2 N·m (two M4 screws)
- Housing Lid Screw: 0.2 to 0.4 N·m (M3 screw)
- Terminal Screw: 0.6 to 0.8 N·m (M3 screw)
- Connector: 2.7 to 3.3 N·m
- Actuators
 - HS9Z-A51: 1.8 ± 2.2 N·m (two M4 screws)
 - HS9Z-A52: 0.8 ± 1.2 N·m (two M4 Phillips screws)
 - HS9Z-A51A/A52A: 1.0 to 1.5 N·m (two M4 screws)
 - HS9Z-A55: 1.0 to 1.5 N·m (two M4 screws)
- The above recommended tightening torques of the mounting screws are the values confirmed with hex socket head bolts. When other screws are used and tightened to a smaller torque, make sure that the screws do not come loose after mounting.
- Mounting bolts must be provided by the user.
- To avoid unauthorized or unintended removal of the interlock switch and the actuator, it is recommended that the interlock switch and the actuator be installed in an unremovable manner, for example using special screws or welding the screws.

Safety Control Relays

Light Curtains

AS-Interface Safety at Work

Applicable Crimping Terminal

When using crimping terminals, be sure to install insulation tubes on the crimping terminals to prevent electric shocks. When using stranded wires, make sure that loose wires do not cause short circuit. Also do not solder the terminal to prevent loose wires.

Applicable wire size (with insulation tube): 0.2 to 0.5 mm² (20 ~ 24 AWG)

Note: Do not remove screw A during wiring. Removing the screw may cause malfunction or damage.

Applicable Wire Size

0.5 to 1.5 mm² (16 ~ 20 AWG)

Applicable Cable Glands

Use a cable gland with a degree of protection IP67.

HS2B Full Size Interlock Switches

Key features:

- Direct Opening Action: If the door is forced open, the contacts are disconnected even if they are welded or stuck
- Available with or without an indicator (red or green)
- Flexible Installation: Two actuator entries and three conduit ports are provided
- 1NC-1NO contacts
- Compact and lightweight plastic housing
- Degree of Contact Protection: IP67

GS-ET-15
BG standard in Germany

Direct Opening Action

Double Insulation

(Horizontal Mounting)

(Vertical Mounting)

Dimensions (mm), continued

Using the Right-angle actuator (HS9Z-A2)

(Horizontal Mounting)

(Vertical Mounting)

Plug the unused actuator insertion slot using the slot plug supplied with the interlock switch.

Actuator Dimensions

Straight Actuator HS9Z-A1

Right-angle Actuator HS9Z-A2

Angle-adjustable Actuator HS9Z-A3

Adjustable Actuator

The actuator angle is adjustable (0° to 20°) for hinged doors.

The minimum radius of the door opening can be as small as 100mm.

Actuator Angle Adjustment

- Using the screw (M3 hex socket head screw), the actuator angle can be adjusted (refer to the dimensional drawing). Adjustable angle: (0°) to 20°
- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening.

- After installing the actuator, open the door. Then adjust the actuator so that its edge can be inserted properly into the entry slot of the safety switch.
- Recommended tightening torque: 0.8 N-m (approx. 8.0 kgf-cm)
- After adjusting the actuator angle, apply loctite or the like to the adjustment screw to prevent it from loosening.

HS1B Full Size Interlock Switches

Key features:

- Rugged aluminum die-cast housing
- Direct Opening Action
- Available with or without an indicator (red or green)
- Flexible Installation: Two actuator entries and three conduit ports are provided
- Select from two circuit configurations (1NO-1NC or 2NC).
- IP67

	HS9Z-T1	Key Wrench (included with switch)
	HS9Z-P1	Conduit Opening Plug

Actuators are not included and must be ordered separately.

Specifications

Conforming to Standards		IEC60947-5-1, EN60947-5-1, GS-ET-15, UL508, CSA C22.2 No. 14
Operating Temperature		−20 to +70°C (no freezing)
Storage Temperature		−40 to +80°C
Relative Humidity		45 to 85% (no condensation)
Altitude		2,000m maximum
Rated Insulation Voltage (U _i)		300V (between LED and ground: 60V)
Impulse Withstand Voltage (U _{imp})		4 kV (between LED and ground: 2.5 kV)
Insulation Resistance		Between live and dead metal parts: 100 MΩ minimum Between live metal part and ground: 100 MΩ minimum Between live metal parts: 100 MΩ minimum Between terminals of the same pole: 100 MΩ minimum
Electric Shock Protection Class		Class I (IEC61140)
Pollution Degree		3 (IEC60947-5-1)
Degree of Protection		IP67 (IEC60529)
Vibration Resistance	Operating Extremes	10 to 55 Hz, amplitude 0.5mm p-p
	Damage Limits	60 m/sec ² (approx. 6G)

Shock Resistance		1,000 m/sec ² (approx. 100G)
Actuator Operating Speed		0.05 to 1.0m/s
Direct Opening Travel		11 mm minimum
Direct Opening Force		20N minimum
Thermal Current (I _{th})		10A
Operating Frequency		900 operations/hour
Mechanical Life		1,000,000 operations
Electrical Life		100,000 operations (rated load)
Conditional Short-circuit Current		100A (IEC60947-5-1)
Recommended Short Circuit Protection		250V, 10A fuse (Type D01 based on IEC60269-1, 60269-2)
Indicator	Operating Voltage	24V DC
	Current	10 mA
	Light Source	LED lamp
	Lens Color	Red or Green (12 mm dia. Lens)
Weight		Approx. 280g

Contact Ratings

		Operating Voltage (U _e)	30V	125V	250V
Rated Operating Current (I _e)	AC	Resistive load (AC12)	10A	10A	6A
		Inductive load (AC15)	10A	5A	3A
	DC	Resistive load (DC12)	8A	2.2A	1.1A
		Inductive load (DC13)	4A	1.1A	0.6A

Application Examples and Circuit Diagrams

		Status 1	Status 2			Status 1	Status 2
Door/ Switch Status		Door Closed Machine ready to operate	Door opened Machine cannot be started	Door/ Switch Status		Door Closed Machine ready to operate	Door opened Machine cannot be started

- 
1. Main Circuit: used to enable the machine to start only when the main circuit is closed. Auxiliary Circuit: used to indicate whether the main circuit or door is open or closed.

2. Terminals + and - are used for the LED indicator, and are isolated from door status. Wire the terminals only when needed.

Dimensions (mm)

Using the straight actuator (HS9Z-A1)
(Horizontal Mounting)

(Vertical Mounting)

Using the Right-angle actuator (HS9Z-A2)
(Horizontal Mounting)

(Vertical Mounting)

Plug the unused actuator insertion slot using the slot plug supplied with the interlock switch.

Actuator Dimensions

Straight Actuator HS9Z-A1

Right-angle Actuator HS9Z-A2

Angle-adjustable Actuator HS9Z-A3

Adjustable Actuator

The actuator angle is adjustable (0° to 20°) for hinged doors.

The minimum radius of the door opening can be as small as 100mm.

Actuator Angle Adjustment

- Using the screw (M3 hex socket head screw), the actuator angle can be adjusted (refer to the dimensional drawing). Adjustable angle: (0°) to 20°

- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening.
- After installing the actuator, open the door. Then adjust the actuator so that its edge can be inserted properly into the entry slot of the safety switch.
- Recommended tightening torque: 0.8 N-m (approx. 8.0 kgf-cm)
- After adjusting the actuator angle, apply loctite or the like to the adjustment screw to prevent it from loosening.

HS6E Subminiature Interlock Switches with Solenoid

Key features:

- Compact body: 75 × 15 × 75mm
15mm wide, thinnest solenoid interlock switch in the world
- Reversible mounting and angled cable allow four actuator insertion directions
- Energy saving: 24V DC, 110mA (solenoid: 100mA, LED: 10mA)
- Manual unlocking possible on three sides
- LED indicator shows solenoid operation
- 500N locking retention force

Actuator Keys

Appearance	Item	Ordering Part Number	Remarks
	Straight Actuator	HS9Z-A61	The retention force of HS9Z-A61 actuator is 500N maximum. Do not apply excessive load.
	Right-angle Actuator	HS9Z-A62	The retention force of HS9Z-A62 actuator is 100N maximum. Do not apply excessive load. When retention force of 100N or more is required, use the HS9Z-A62S actuator.
	Right-angle Actuator with Mounting Plate	HS9Z-A62S	The retention force of HS9Z-A62S actuator is 500N maximum. Do not apply excessive load.
	Horizontal/Vertical Angle Adjustable Actuator	HS9Z-A65	The HS9Z-A65 and HS9Z-A66 have their metal actuator installed in opposite directions. Select actuator by determining the required moving direction in consideration of the door and interlock switch. See page 294 for more information. The retention force of HS9Z-A65 and HS9Z-A66 500N maximum.
	Horizontal/Vertical Angle Adjustable Actuator	HS9Z-A66

 Main circuit: Connected to the machine drive control circuit, sending the interlock signals of the protective door.
Monitor circuit: Sends the monitoring signals of open/closed and lock/unlocked statuses of the protective door.

Note 1: Do not attempt manual unlocking while the solenoid is energized.
Note 2: Do not energize the solenoid for a long period of time while the door is open or while the door is unlocked manually using the manual unlock key.

Operation Characteristics (reference)

 The characteristics shown in the chart above are of the HS9Z-A61, -A62, -A65, and -A66 actuators. For the HS9Z-A62S actuator, subtract 0.6 mm.
The characteristics show the contact status when the actuator enters an entry slot of an interlock switch.

Operating Instructions

Minimum Radius of Hinged Door

- When using the interlock switch on hinged doors, refer to the minimum radius of doors shown below. When using on doors with small minimum radius, use the angle adjustable actuator (HS9Z-A65 and HS9Z-A66).

Note: Because deviation or dislocation of hinged doors may occur in actual applications, make sure of the correct operation before installation.

When Using the HS9Z-A62/A62S Right-angle Actuator

- When door hinge is on the extension line of the interlock switch surface:

- When door hinge is on the extension line of the actuator mounting surface:

When using the HS9Z-A65/HS9Z-A66 Angle Adjustable Actuator

- When door hinge is on the extension line of the interlock switch surface

Horizontal Adjustment

Vertical Adjustment

- When door hinge is on the extension line of the actuator mounting surface

Horizontal Adjustment

Vertical Adjustment

Actuator Angle Adjustment for the HS9Z-A65/HS9Z-A66

- Using the angle adjustment screw, the actuator angle can be adjusted (see figures on page 370).
Adjustable angle: 0 to 20°
- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening.
- After installing the actuator, open the door. Then adjust the actuator so that its edge can enter properly into the actuator entry slot of the interlock switch.
- After adjusting the actuator angle, apply Loctite to the adjustment screw so that the screw will not become loose.

Mounting Examples

Application on Sliding Doors

Application on Hinged Doors

Note: When mounting the actuator, make sure that the actuator enters the slot in the correct direction, as shown on the right.

For Manual Unlocking

When using the manual unlock key

- Using the interlock switch with the actuator not fully turned (less than 90°) may cause damage to the interlock switch or operation failures (when manually unlocked, the switch will keep the main circuit disconnected and the door unlocked).
- Do not apply excessive force (0.45 N·m or more) to the manual unlock part, otherwise the manual unlock part will become damaged.

Manual Unlock Key
(supplied with the interlock switch)

See instruction manual for full details.

Recommended Tightening Torque of Mounting Screws

- Interlock switch: 1.0 to 1.5 N·m (three M4 screws)
- Actuators: 1.0 to 1.5 N·m (two M4 screws)

Cables

- Do not fasten or loosen the gland at the bottom of the interlock switch.
- When bending the cable during wiring, make sure that the cable radius is kept at 30 mm minimum.
- When wiring, make sure that water or oil does not enter from the end of the cable.
- Do not open the lid of the interlock switch. Otherwise the interlock switch will be damaged.
- The solenoid has polarity. Make sure of the correct polarity when wiring.

Wire Identification

- Wires can be identified by color and or a white line printed on the wire.

No.	Insulation Color	No.	Insulation Color
1	Blue/White	7	White
2	Gray	8	Black
3	Pink	9	Pink/White
4	Orange	10	Brown/White
5	Orange/White	11	Brown
6	Gray/White	12	Blue

Terminal Number Identification

- When wiring, identify the terminal number of each contact by the color of the insulation.
- The following table shows the identification of terminal numbers.
- When wiring, cut unused wires to avoid incorrect wiring.

Type	Contact Arrangement	
	Door Monitor	Lock Monitor
HS6E-L	Main circuit: Blue → 11 → 12 Monitor circuit: Brown → 21 → 22 Monitor circuit: Orange → 31 → 32	41 → 42 Blue/White Pink 53 → 54 Pink/White Orange/White
HS6E-M	Main circuit: Blue → 11 → 12 Monitor circuit: Brown → 21 → 22 Monitor circuit: Orange → 31 → 32	41 → 42 Blue/White Pink 51 → 52 Pink/White Orange/White
HS6E-N	Main circuit: Blue → 11 → 12 Monitor circuit: Brown → 21 → 22 Monitor circuit: Orange → 33 → 34	41 → 42 Blue/White Pink 53 → 54 Pink/White Orange/White
HS6E-P	Main circuit: Blue → 11 → 12 Monitor circuit: Brown → 21 → 22 Monitor circuit: Orange → 33 → 34	41 → 42 Blue/White Pink 51 → 52 Pink/White Orange/White

Note: The contact arrangements show the contact status when the actuator is inserted and locked.

HS5E Miniature Interlock Switches with Solenoid

Spring Lock Type Features:

- Automatically locks the actuator without power applied to the solenoid
- After the machine stops, unlocking is completed by the solenoid, providing high safety features
- Manual unlocking is possible in the event of power failure or maintenance
- Gold-plated contacts

Solenoid Lock Type Features:

- The actuator is locked when energized
- The actuator is unlocked when de-energized
- Flexible locking function can be achieved for an application where locking is not required and sudden stopping of machine must be prevented
- Gold-plated contacts

 The contact configuration shows the status when the actuator is inserted and the switch is locked.
The contact configuration shows the status when the indicator is installed.
Actuators are not supplied with the interlock switch and must be ordered separately.

Actuator Keys & Accessories (order separately)

Appearance	Part Number	Description	Item	Part Number	Description
	HS9Z-A51	Straight		HS9Z-PH5	Padlock Hasp (prevents unauthorized insertion of actuator)
	HS9Z-A52	Right-angle		HS9Z-SP51	Mounting Plate (allows easy mounting to aluminum frames)
	HS9Z-A53	Angle adjustable vertical operation		HS9Z-T3	Manual unlock key (long type - metal)
	HS9Z-A55	Angle adjustable horizontal/vertical operation ¹		HS9Z-SH5	Sliding Actuator
	HS9Z-A5P	Plug Actuator (allows switch to be used as interlock plug unit)	 1. The actuator tensile strength is 500N minimum. 2. Actuators are not included and must be included separately.		

Specifications

Conforming Standards	ISO14119, IEC60947-5-1, EN60947-5-1 (TÜV approval), EN1088, GS-ET-19 (BG approval), UL508, CSA C22.2, No. 14, GB 140485.5 (CCC approval) IEC60204-1/EN60204-1
Application Standards	IEC60204-1/EN60204-1
Operating Temperature	–25 to 50°C (no freezing)
Relative Humidity	45 to 85% (no condensation)
Storage Temperature	–40 to +80°C (no freezing)
Operating Environment	Degree of pollution: 3
Impulse Withstand Voltage	2.5 kV (between LED, solenoid and grounding: 0.5 kV)
Insulation Resistance (DC megger)	Between live and dead metal parts: 100 MΩ minimum Between live metal part and ground: 100 MΩ minimum Between live metal parts: 100 MΩ minimum Between Terminals of the same pole: 100 MΩ minimum
Electric Shock Protection Class	Class II (IEC61140)
Degree of Protection	IP67 (IEC60529)
Shock Resistance	Operating extremes: 100 m/s ² (10 G) Damage limits: 1000 m/s ² (100 G)
Vibration Resistance	Operating extremes: 10 to 55 H, amplitude 0.35 mm minimum Damage limits: 30 Hz, amplitude 1.5 mm minimum
Actuator Operating Speed	0.05 to 1.0m/s
Direct Opening Travel	Actuator HS9Z-A51: 11mm minimum Actuator HS9Z-A52/A53/A55: 12mm minimum
Direct Opening Force	80N minimum
Actuator Retention Force	1400N minimum (GS-ET-19)
Operating Frequency	900 operations per hour
Mechanical Life	1,000,000 operations minimum (GS-ET-19)
Electrical Life	100,000 operations minimum (operating frequency 900 operations per hour, rated load AC-12, 250V, 1A)
Conditional Short-circuit Current	50A (250V) (Note: Use 250V/10A fast acting type fuse for short circuit protection.)
Cable	21AWG - 8-core: 0.5mm ² or equivalent/core (HS5E-V types: No. 22AWG - 12-core :0.3mm ² on equivalent/ core)
Cable Diameter	ø7.6 mm
Weight (approx.)	400g - 1m cable type, 580g - 3m cable type, 760g - 5m cable type

Specifications

Rated Voltage	24V DC
Current	266 mA
Coil Resistance	90Ω (at 20°C)
Operating Voltage	Rated voltage x 85% or less (at 20°C)
Return Voltage	Rated voltage x 10% or more (at 20°C)
Maximum Continuous Applying Voltage	Rated voltage x 110%
Insulation Class	Class F

Pilot Light

Rated Voltage	24V DC
Current	10mA
Light Source	LED
Light Color	Green

Current Ratings

Rated Insulation Voltage (U _i) ²			250V (between LED, solenoid and grounding: 30V)		
Thermal Current (I _{th})			2.5A		
Rated Voltage (U _e)			30V	125V	250V
Rated Current (I _e) ³	AC	Resistive load (AC12)	—	2.5A	1.5A
		Inductive Load (AC15)	—	1.5A	0.75A
	DC	Resistive load (DC12)	2.5A	1.1A	0.55A
		Inductive Load (DC13)	2.3A	0.55A	0.27A

1. Minimum applicable load (reference value): 3V AC/DC, 5 mA
2. UL rating: 125V
3. TUV, BG rating: AC-15, 0.5A/250V, DC-13, 0.22A/125V
UL, c-UL rating: Pilot duty AC 0.5A/125V, Pilot duty DC 0.22A/125V

Dimensions (mm) and Mounting Hole Layouts

HS5E-□□4□-G (with indicator)

Horizontal Mounting/Straight Actuator (HS9Z-A51)

Vertical Mounting/Right-angle Actuator (HS9Z-A52)

HS5E-□44L□-G (rear unlocking button type)

Horizontal Mounting/Straight Actuator (HS9Z-A51)

Rear unlocking button mounting

- $X \leq 6$ Panel mounting
- $6 < X < 23$ Not mountable
- $23 \leq X \leq 33$ Use HS9Z-FL53 rear unlocking button kit (Note)
- $33 < X \leq 43$ Use HS9Z-FL54 rear unlocking button kit (Note)

X = Panel thickness
(including panel, mounting frame, and mounting plate)

Note: See page 306 for details.

Note: With the mounting hole dimension, the rear unlocking button rod does not touch the hole even when the interlock switch moves sideways.

Actuator Mounting Reference Position

As shown in the figure on the right, the mounting reference position of the actuator when inserted in the interlock switch is where the actuator stop placed on the actuator lightly touches the interlock switch.

Note: After mounting the actuator, remove the actuator stop from the actuator.

Dimensions and Mounting Hole Layouts, continued

Straight Actuator (HS9Z-A51)

Right-angle Actuator (HS9Z-A52)

Straight Actuator w/Rubber Bushings (HS9Z-A51A)

Right-angle Actuator w/Rubber Bushings (HS9Z-A52A)

Actuator Orientation

The orientation of actuator swing (horizontal/vertical) can be changed using the orienting insert (white plastic) installed on the back of the actuator. Do not lose the orientating insert, otherwise the actuator will not swing properly.

The above contact configuration shows the status when the actuator is inserted and locked.
 Monitor Circuit: Sends monitoring signals of protective door open/closed status or protective door lock/unlock status.

Note: Actuator can be unlocked manually for confirming the door movement before wiring and energizing, and also for emergency situation such as power failure.

Operation Characteristics (reference)

The operation characteristics shown in the chart above are of the HS9Z-A51. For other actuator types, add 1.3 mm.

The operation characteristics show the contact status when the actuator enters the entry slot of an interlock switch.

Operating Instructions

Minimum Radius of Hinged Door

- When using the interlock switch for a hinged door, refer to the minimum radius of doors shown below. For the doors with small minimum radius, use angle adjustable actuators (HS9Z-A53 or HS9Z-A55).

Because deviation or dislocation of hinged door may occur in actual applications, make sure of the correct operation before installation.

HS9Z-A52 Actuator

When the door hinge is on the extension line of the interlock switch surface:

When the door hinge is on the extension line of the actuator mounting surface:

HS9Z-A52 Actuator (w/rubber bushings)

When the door hinge is on the extension line of the interlock switch surface:

When the door hinge is on the extension line of the actuator mounting surface:

Actuator Angle Adjustment

- Using the angle adjustment screw, the actuator angle can be adjusted (refer to the dimensional drawing on page 304).
Adjustable angle: 0 to 20°
- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening.
- After installing the actuator, open the door. Then adjust the actuator so that its edge can be inserted properly into the actuator entry slot of the interlock switch.
- After adjusting the actuator angle, apply Loctite to the adjustment screw so that the screw will not move.

When using the HS9Z-A53 Angle Adjustable (vertical) Actuator

When the door hinge is on the extension line of the interlock switch surface: 50 mm

When the door hinge is on the extension line of the actuator mounting surface: 80 mm

When using the HS9Z-A55 Angle Adjustable (vertical/horizontal) Actuator

When the door hinge is on the extension line of the interlock switch surface: 50 mm

Horizontal Swing

Vertical Swing

Horizontal Swing

Vertical Swing

When the door hinge is on the extension line of the actuator mounting surface: 70 mm

Rotating the Head

The head of the HS5E can be rotated by removing the four screws from the corners of the HS5E head and reinstalling the head in the desired orientation. Before wiring the HS5E, replace the head if necessary. Before replacing the head, turn the manual unlock to the UNLOCK position using the manual unlock key. When reinstalling the head, make sure that no foreign object enters the interlock switch. Tighten the screws tightly, without leaving space between the head and body, otherwise the interlock switch may malfunction. Recommended tightening torque: 0.9 to 1.1 N·m.

Instructions, continued

For Manual Unlocking**Spring lock type**

The HS5E allows manual unlocking of the actuator to pre-check proper door movement before wiring or turning power on, as well as for emergency use such as a power failure.

Solenoid lock type

The solenoid lock type interlock switch normally does not need the manual unlock. However, only when the interlock switch would not release the actuator even though the solenoid is de-energized, the interlock switch can be unlocked manually. Unlock the interlock switch manually only when the solenoid is de-energized. Do not unlock the interlock switch manually when the solenoid is energized.

When locking or unlocking the interlock switch manually, turn the key fully using the manual unlock key supplied with the interlock switch.

Using the interlock switch with the key not fully turned (less than 90°) may cause damage to the interlock switch or operation failures (when manually unlocked, the interlock switch will keep the main circuit disconnected and the door unlocked).

Do not apply excessive force to the manual unlock, otherwise the manual unlock will become damaged.

Do not leave the manual unlock key attached to the interlock switch during operation. This is dangerous because the interlock switch can always be unlocked while the machine is in operation.

Manual Unlocking Key
(supplied with the switch)

Installing the Rear Unlocking Button

After installing the interlock switch on the panel, place the rear unlocking button (supplied with the switch) on the push rod on the back of the interlock switch, and fasten the button using the M3 screws. Rear unlocking button can be installed alone when the total thickness of mounting frame and panel is 6 mm or less. When the total thickness of mounting frame, panel, and mounting plate is 23 to 43 mm, use the rear unlocking button kit (HS9Z-FL53 or HS9Z-FL54) sold separately.

**Cables**

- When bending the cable during wiring, make sure that the cable radius is kept at 30 mm minimum.
- Solenoid has polarity. Be sure of the correct polarity when wiring.

**Safety Precautions**

Install the rear unlocking button kit in the correct direction as shown below. Do not install the kit in incorrect directions, otherwise malfunction will be caused.

Do not apply strong force exceeding 100 m/s² to the interlock switch while the rear unlocking button is not pressed, otherwise malfunction will be caused.

Manual Unlocking using the Rear Unlocking Button

The rear unlocking button is used by the operator confined in a hazardous area for emergent escape.

**How to operate**

When the rear unlocking button is pressed, the interlock switch is unlocked and the door can be opened.

To lock the interlock switch, pull back the button.

When the button remains pressed, the interlock switch cannot be locked even if the door is closed, and the main circuit remains open.

Recommended Tightening Torque

- HS5E interlock switch: 1.8 to 2.2 N·m (four M4 screws) (Note)
- Rear unlocking button: 0.5 to 0.7 N·m
- Rear unlocking button kit: 4.8 to 5.2 N·m (M5 screw)
- Actuators
 - HS9Z-A51: 1.8 to 2.2 N·m (two M4 screws)
 - HS9Z-A52: 0.8 to 1.2 N·m (two M4 Phillips screws)
 - HS9Z-A51A/A52A: 1.0 to 1.5 N·m (two M4 screws)
 - HS9Z-A53: 4.5 to 5.5 N·m (two M6 screws)
 - HS9Z-A55: 1.0 to 1.5 N·m (two M4 screws)

Note: The above recommended tightening torque of the mounting screws are the values with hex socket head bolts. When other screws are used and tightened to a smaller torque, make sure that the screws do not become loose after mounting.

Instructions, continued

Wire Identification

Wires can be identified by color and a white line printed on the wire.

- HS5E-V: Wires of gray and gray/white insulation cannot be used.
- HS5E-DD: Wires of brown and brown/white insulation cannot be used.

No.	Insulation	No.	Insulation	No.	Insulation	No.	Insulation
1	White	4	Blue	7	Blue/White	10	Pink/White
2	Black	5	Brown/White	8	Orange/White	11	Gray
3	Brown	6	Orange	9	Pink	12	Gray/White

Terminal Number Identification

- When wiring, the terminal number of each contact can be identified by wire color.
- The following table shows the identification of terminal numbers.

Type	Circuit Diagram
HS5E-A	
HS5E-B	
HS5E-C	
HS5E-D	
HS5E-F	
HS5E-G	
HS5E-H

HS5E-DD	

Type	Circuit Diagram
HS5E-VA	
HS5E-VB	
HS5E-VC	
HS5E-VD	

The above contact configuration shows the status when the actuator is inserted and locked.

When wiring, cut unnecessary wires such as the dummy insulation (white) and any unused wires.

HS1E Full Size Solenoid Locking Switches

Key features:

- Plastic Housing: Lightweight
- 1500N locking retention force
- Available with a red or green indicator
- Choose from 4 circuit configurations
- Flexible Installation: The actuator can be accessed from two directions
- Ease of Wiring: M3.5 termination screws

Right-angle Actuator (mainly for hinged doors) HS9Z-A2

Adjustable Actuator

- The actuator angle is adjustable (0° to 20°) for hinged doors.
- The minimum radius of the door opening can be as small as 100mm.

For HS1/HS2 Series (HS9Z-A3)

Applicable Crimping Terminals

- (Refer to the Crimping Terminal 1 or 2 shown in the drawing below.)
- HS1C
Terminals No. 1 to 6: Use solid or stranded wires only (crimping terminals not applicable).
Terminals No. 7 and 8: Crimping Terminal 1
Ground Terminal: Crimping Terminal 2
- HS1B
Ground Terminal: Crimping Terminal 2
Other Terminals: Crimping Terminal 1
HS2B, HS5B, and HS1E
Crimping Terminal 1

Crimping Terminal 1

Crimping Terminal 2

Use an insulation tube on the crimping terminal.

HS1L Interlock Switches with Solenoid

Key features:

- 3,000N locking retention force
- LED indicator
- Energy-efficient solenoid
- 6 contacts with easy-to-wire terminations
- M3 terminal screws for easy wiring

Part Numbers

Mechanical Spring Lock (power solenoid to unlock)

1. Contact configuration shows the contact status when actuator is inserted and solenoid off for spring lock.
2. Contact configuration shows the contact status when actuator is inserted and solenoid on for solenoid lock.
3. Actuators are not supplied with the interlock switch and must be ordered separately.
4. Standard stock items in bold.

Actuator Keys & Accessories (order separately)

Appearance	Part Number	Description
	HS9Z-A1	Straight Actuator
	HS9Z-A2	Right-angle Actuator
	HS9Z-A3	Adjustable Actuator

Appearance	Part Number	Description
	HS9Z-T1	Key Wrench (included with switch)
	HS9Z-P1	Conduit Opening Plug (G1/2)

Specifications

Conforming to Standards	ISO14119, IEC60947-5-1, EN60947-5-1 (TÜV approval), GS-ET-19 (TÜV approval), UL508, CSA C22.2 No. 14, IEC60204-1/EN60204-1 (applicable standards for use)	
Operating Temperature	-20 to +55°C (no freezing)	
Storage Temperature	-40 to +80°C (no freezing)	
Relative Humidity	45 to 85% (no condensation)	
Rated Insulation Voltage (Ui)	300V	
Overvoltage Category	III	
Electric Shock Protection	Class II (IEC 61140)	
Degree of Protection	IP67 (IEC 60529)	
Shock Resistance	Damage limits: 1000m/s ²	
Actuator Retention Force	3000N minimum (GS-ET-19)	
Actuator Operating Speed	0.05 to 1.0m/s	
Direct Opening Travel	11mm minimum	
Direct Opening Force	50N minimum	
Thermal Current (Ith)	10A	
Operating Frequency	900 operations per hour	
Mechanical Life	1,000,000 operations minimum (GS-ET-19)	
Electrical Life	100,000 operations minimum (AC-15 3A/250V) 1,000,000 operations minimum (24V AC/DC, 100mA) (operating frequency 900 operations per hour)	
Solenoid Unit	Rated Operating Voltage	24V DC (100% duty cycle)
	Rated Current	200mA (initial value)
Indicator	Rated Operating Voltage	24V DC
	Rated Current	10mA
	Light Source	LED
	Illumination Color	Green (G), Red (R)
Weight (approx.)	450g (HS1L-DQ44)	

Dimensions (mm)

Contact Ratings

		Rated Voltage (U _e)	30V	125V	250V
Rated Operating Current (I _e)	AC	Resistive load (AC12)	10A	10A	6A
		Inductive load (AC15)	10A	5A	3A
	DC	Resistive load (DC12)	8A	2.2A	1.1A
		Inductive load (DC13)	4A	0.9A	0.6A

Actuator Angle Adjustment

Using the screw (M3 hex socket head screw), the actuator angle can be adjusted (refer to the dimensional drawing). Adjustable angle: (0°) to 20°

- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening.

Minimum Radius of Hinged Door

When using the interlock switch on hinged doors, refer to the minimum radius of doors shown below. When using on doors with small minimum radius, use the angle adjustable actuator (HS9Z-A55).

Note: Because deviation or dislocation of hinged doors may occur in actual applications, make sure of the correct operation before installation.

When using the HS9Z-A52 Actuator

When the door hinge is on the extension line of the interlock switch surface:

- When door hinge is on the extension line of the actuator mounting surface:

When using the HS9Z-A55 Angle Adjustable Actuator

When door hinge is on the extension line of the interlock switch surface: 50 mm

- When door hinge is on the extension line of the actuator mounting surface: 70 mm

Use a cable gland with a degree of protection IP67

When Using Flexible Conduits (Example)

Flexible conduit example: VF-03 (Nihon Flex)

Conduit Port Size	Plastic Cable Gland	Metal Cable Gland
G1/2	—	RLC-103 (Nihon Flex)
PG13.5	—	RBC-103PG13.5 (Nihon Flex)
M20	—	RLC-103EC20 (Nihon Flex)

- After installing the actuator, open the door. Then adjust the actuator so that its edge can be inserted properly into the entry slot of the safety switch.
- Recommended tightening torque: 0.8 N-m (approx. 8.0 kgf-cm)
- After adjusting the actuator angle, apply loctite or the like to the adjustment screw so as to prevent its loosening.

Horizontal Swing

Vertical Swing

Actuator Angle Adjustment for the HS9Z-A55

Using the angle adjustment screw, the actuator angle can be adjusted (see figures on page 370). Adjustable angle: 0 to 20°

- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening.
- After installing the actuator, open the door. Then adjust the actuator so that its edge can be inserted properly into the actuator entry slot of the interlock switch.
- After adjusting the actuator angle, apply Loctite to the adjustment screw so that the screw will not loosen.

Applicable Cable Glands

When Using Multi-core Cables (Example)

Conduit Port Size	Plastic Cable Gland	Metal Cable Gland
G1/2	SCS-10* (Seiwa Electric)	ALS-16** (Nihon Flex)
PG13.5	ST13.5 (K-MECS)	ABS-**PG13.5 (Nihon Flex)
M20	ST-M20X1.5 (K-MECS)	ALS-**EC20 (Nihon Flex)

- Different cable glands are used depending on the cable sheath outside diameter. When purchasing a cable gland, confirm that the cable gland is applicable to the cable sheath outside diameter.
- When using a 1/2-14NPT cable gland, use the HS5B interlock switch with M20 conduit port (Part No.: HS5B-***BM) together with an adapter (Part No.: MA-M/NPT 20X1.5 5402-0110, K-MECS) and a gasket (Part No.: GP M20, K-MECS). Install a gasket between the interlock switch and the adapter. Apply sealing tape between the cable gland and the adapter to make sure of IP67 protection for the enclosure.

HS5E-K Key Locking Safety Interlock Switches

Key features:

- Head removal detection circuitry.
- High-security pin tumbler key types are used. Sixteen types of key numbers are available, see page 330.
- Available with rear unlocking button for emergency escape.
- Accessory available for aluminum frame mounting.
- Gold-plated contacts.
- The locking strength is 1400N minimum. (GS-ET-19)
- The head orientation can be rotated, allowing 8 different actuator entries.
- Metal actuator entry slot ensures high durability.
- Actuator with rubber bushings alleviates the impact of the actuator entry slot.
- Environmentally-friendly. RoHs directive compliant.
- Double insulation structure. No need for grounding.
- Compact body: 35 × 40 × 146 mm

A single key used for interlock switch and selector switch prevents itself from being left in the lock.

Hostage key ensures that the person holding the key is not locked inside the hazardous area.

Hostage key prevents the machine from starting unexpectedly.

HS5E-K key interlock switches use a key to lock and unlock a door of safeguard. When the key is taken into a dangerous area, the interlock switch cannot be locked and the machine does not operate. Therefore, workers can be prevented from being locked in a dangerous area, and the system is prevented from restarting unexpectedly. Furthermore, because the key used for HS5E-K key interlock switches can also be used for HW series key selector switches (pin tumbler type), switching operation modes of systems and door unlocking can be performed using a single key. 16 types of key numbers are available, so that each system can have its own key, and a higher level of safety can be achieved.

The contact configuration shows the status when the actuator is inserted and the switch is locked. Actuators are not supplied with interlock switches and must be ordered separately. Key number 500 is supplied as the default key in table above (500 not added to part number).

To order additional key types, specify key number at end of part number (special order).
Example: HS5E-KVA003-2A501
501 to 515
Note: The key number is engraved on the cylinder.

Actuator Keys & Accessories

Appearance	Part Number	Description	Appearance	Part Number	Description	Appearance	Part Number	Description
	HS9Z-A51	Straight		HS9Z-A55	Angle adjustable horizontal/vertical operation ¹		HS9Z-SP51	Mounting Plate (allows easy mounting to aluminum frames)
	HS9Z-A52	Right-angle		HS9Z-A5P	Plug Actuator (allows switch to be used as interlock plug unit)		HS9Z-T3	Manual unlock key (long type - metal)
	HS9Z-A53	Angle adjustable vertical operation		HS9Z-PH5	Padlock Hasp (prevents unauthorized insertion of actuator)		HS9Z-SH5	Sliding Actuator

1. The actuator tensile strength is 500N minimum.
2. Actuators are not included and must be included separately.

Specifications

Applicable Standards	ISO14119, IEC60947-5-1, EN60947-5-1 (TÜV approval), EN1088, GS-ET-19 (TÜV approval), UL508 (UL recognition), CSA C22.2 No. 14 (c-UL recognized)

		Inductive Load (AC15)	—	1.5A
	DC	Resistive load (DC12)	2.5A	1.1A
		Inductive Load (DC13)	2.3A	0.55A

Minimum applicable load (reference value) = 3V AC/DC, 5 mA
(Applicable range may vary with operating conditions and load types.)

- 1: UL rating: 125V
- 2: TÜV rating: AC-15, 0.5A/250V, DC-13, 0.22A/125V
UL, c-UL rating: Pilot Duty AC 0.5A/125V, Pilot Duty DC 0.22A/125V

Standard Type - Solenoid Lock Type

Interlock Switch Status			Status 1	Status 2	Status 3	Manual Unlock
			- Door Closed - Machine ready to operate - Solenoid energized	- Door Closed - Machine cannot be operated - Solenoid de-energized	- Door Open - Machine cannot be operated - Solenoid de-energized	- Door Closed - Machine cannot be operated - Solenoid de-energized energized
Door Status						 Press Press rear unlocking button. (Note)
Circuit Diagram (HS5E-KVA)						
Door			Closed (locked)	Closed (unlocked)	Open	Closed (unlocked)
Type No. and Contact Configuration	HS5E-KVA	Main Circuit (door closed) 11-12	ON (closed)	ON (closed)	OFF (open)	ON (closed)
		Monitor Circuit (door open) 23-24	OFF (open)	OFF (open)	ON (closed)	OFF (open)
		Monitor Circuit (locked) 41-42	ON (closed)	OFF (open)	OFF (open)	ON (closed)
		Monitor Circuit (unlocked) 53-54	OFF (open)	ON (closed)	ON (closed)	ON (closed)
	HS5E-KVD	Main Circuit (door closed) 11-12	ON (closed)	ON (closed)	OFF (open)	ON (closed)
		Monitor Circuit (door open) 21-22	ON (closed)	ON (closed)	OFF (open)	OFF (open)
		Monitor Circuit (locked) 41-42	ON (closed)	OFF (open)	OFF (open)	OFF (open)
		Monitor Circuit (unlocked) 51-52	ON (closed)	OFF (open)	OFF (open)	OFF (open)

Note: When the operator is confined in a hazardous area, the actuator can be unlocked manually by pressing the rear unlocking button, which should be accessed easily by the operator. The above contact configuration shows the status when the actuator is inserted and the switch is locked. Monitor circuit: Sends monitoring signals of protective door open/closed status or protective door lock/unlock status.

Operation Characteristics (reference)

The operation characteristics shown in the chart above are of the HS9Z-A51. For other actuator types, add 1.3 mm.

The operation characteristics show the contact status when the actuator enters the entry slot of an interlock switch.

Dimensions (mm) and Mounting Hole Layouts

HS5E-K□

When using Horizontal Mounting / Straight Actuator (HS9Z-A51)

When using Vertical Mounting / Right-angle Actuator (HS9Z-A52)

HS5E-K□L (Rear Unlocking Button Type)

When using Horizontal Mounting / Straight Actuator (HS9Z-A51)

Rear unlocking button mounting

- $X \leq 6$ Panel mounting
- $6 < X < 23$ Not mountable
- $23 \leq X \leq 33$ Use HS9Z-FL53 rear unlocking button kit (Note)
- $33 < X \leq 43$ Use HS9Z-FL54 rear unlocking button kit (Note)

X = Panel thickness
(including panel, mounting frame, and mounting plate)

Plug the unused actuator entry slot using the plug supplied with the switch.

Note: With the mounting hole dimension, the rear unlocking button rod does not touch the hole even when the interlock switch moves sideways.

Actuator Mounting Reference Position

As shown in the figure on the right, the mounting reference position of the actuator when inserted in the interlock switch is where the actuator stop placed on the actuator lightly touches the interlock switch.

Note: After mounting the actuator, remove the actuator stop from the actuator.

Dimensions and Mounting Hole Layouts, continued

Straight Actuator (HS9Z-A51)

Straight Actuator w/Rubber Bushings (HS9Z-A51A)

Right-angle Actuator (HS9Z-A52)

Right-angle Actuator w/Rubber Bushings (HS9Z-A52A)

Angle Adjustable Actuator (Vertical) (HS9Z-A53)

Actuator Orientation

The orientation of actuator swing (horizontal/vertical) can be changed using the orienting insert (white plastic) installed on the back of the actuator. Do not lose the orienting insert, otherwise the actuator will not swing properly.

Angle Adjustable Actuator (Horizontal/Vertical) (HS9Z-A55)

Sliding Actuator (HS9Z-SH5)

Panel Cut-out

Plug Actuator (HS9Z-A5P)

Padlock Hasp (HS9Z-PH5)

Mounting Plate (HS9Z-SP51)

Drilling Rear Unlocking Button Hole

When installing the HS5E-□44L□-G (rear unlocking button type), provide a rear unlocking button hole on the HS9Z-SP51.

Manual Unlocking Key (Metal) (HS9Z-T3)

Material: Anodized aluminum A6063

Weight: Approx. 180g

Rear Unlocking Button Kit (HS9Z-FL5□)

Rear Unlocking Button Mounting Dimensions

Note: With the mounting hole dimension, the rear unlocking button rod does not touch the hole even when the interlock switch moves sideways.

Example:

When mounted on a □30 mm frame using the mounting plate above (HS9Z-SP51), select HS9Z-FL54 since the mounting part thickness (X) is 40 (X=10 + 30=40).

Operating Instructions

Minimum Radius of Hinged Door

- When using the interlock switch for a hinged door, refer to the minimum radius of doors shown below. For the doors with small minimum radius, use angle adjustable actuators (HS9Z-A53 or HS9Z-A55).

Because deviation or dislocation of hinged door may occur in actual applications, make sure of the correct operation before installation.

HS9Z-A52 Actuator

When the door hinge is on the extension line of the interlock switch surface:

When the door hinge is on the extension line of the actuator mounting surface:

HS9Z-A52 Actuator (w/rubber bushings)

When the door hinge is on the extension line of the interlock switch surface:

When the door hinge is on the extension line of the actuator mounting surface:

Actuator Angle Adjustment (vertical/horizontal)

- Using the angle adjustment screw, the actuator angle can be adjusted (refer to the dimensional drawing on page 333).
Adjustable angle: 0 to 20°
- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening.
- After installing the actuator, open the door. Then adjust the actuator so that its edge can be inserted properly into the actuator entry slot of the interlock switch.
- After adjusting the actuator angle, apply Loctite to the adjustment screw so that the screw will not move.

When using the HS9Z-A53 Angle Adjustable (vertical) Actuator

When the door hinge is on the extension line of the interlock switch surface: 50 mm

When the door hinge is on the extension line of the actuator mounting surface: 80 mm

When using the HS9Z-A55 Angle Adjustable (vertical/horizontal) Actuator

When the door hinge is on the extension line of the interlock switch surface: 50 mm

Horizontal Swing

Vertical Swing

Horizontal Swing

Vertical Swing

When the door hinge is on the extension line of the actuator mounting surface: 70 mm

Rotating the Head

The head of the HS5E can be rotated by removing the four screws from the corners of the HS5E head and reinstalling the head in the desired orientation. Before wiring the HS5E, replace the head if necessary. Before replacing the head, turn the manual unlock to the UNLOCK position using the manual unlock key. When reinstalling the head, make sure that no foreign object enters the interlock switch. Tighten the screws tightly, without leaving space between the head and body, otherwise the interlock switch may malfunction. Recommended tightening torque: 0.9 to 1.1 N·m.

Instructions, continued

Head Removal Detection Circuitry

- Only the lock monitor circuit 41-42 turns off (open) when the head is removed, such as when the head is rotated. The other monitor circuit 51-52 turns ON (close). Be sure to connect the lock monitor circuit (41-42) to a safety circuit.
- When connecting the HS5E-K to a safety circuit, connect the door monitor circuits (11-12) and the lock monitor circuits (41-42) in series. (GS-ET-19)
- When rotating the head, make sure that the interlock switch is not wired or that the key position is in the UNLOCK position.

Key

Follow the instructions below to avoid operating failures and damage.

- Insert the key completely.
- Do not remove or insert the key while turning the key.
- Other than the standard key number (500), 15 types of key numbers are available. Use a key with the same number as the number on the cylinder.
- Do not apply excessive force when turning the key. Otherwise operating failures and damage may occur.
- Do not turn the key to the LOCK side while the actuator is removed (door open). Otherwise, operating failures and breakdowns may occur.

Installing the Rear Unlocking Button (HS5E-K□L)

- After installing the interlock switch on the panel, place the rear unlocking button (supplied with the switch) on the push rod on the back of the interlock switch, and fasten the button using the screw supplied with the switch. Rear unlocking buttons can be installed alone when the total thickness of mounting frame and panel is 6 mm or less. When the total thickness of mounting frame, panel, and mounting plate is 23 to 53 mm, use the rear unlocking button kit (HS9Z-FL53, HS9Z-FL54, or HS9Z-FL55) sold separately.

Recommended Tightening Torque for Mounting Screws

- HS5E interlock switch: 1.8 to 2.2 N·m (four M4 screws) (Note)
- Rear unlocking button: 0.5 to 0.7 N·m
- Rear unlocking button kit: 4.8 to 5.2 N·m (M5 screw)
- Actuators
 - HS9Z-A51: 1.8 to 2.2 N·m (two M4 screws)
 - HS9Z-A52: 0.8 to 1.2 N·m (two M4 Phillips screws)
 - HS9Z-A51A/A52A: 1.0 to 1.5 N·m (two M4 screws)
 - HS9Z-A53: 4.5 to 5.5 N·m (two M6 screws)
 - HS9Z-A55: 1.0 to 1.5 N·m (two M4 screws)

Note: The above recommended tightening torque of the mounting screws are the values with hex socket head bolts. When other screws are used and tightened to a smaller torque, make sure that the screws do not become loose after mounting.

Wire Identification

Wires can be identified by color and a white line printed on the wire.

- HS5E-V: Wires of gray and gray/white insulation cannot be used.
- HS5E-DD: Wires of brown and brown/white insulation cannot be used.

No.	Insulation	No.	Insulation	No.	Insulation	No.	Insulation
1	White	4	Blue	7	Blue/White	10	Pink/White
2	Black	5	Brown/White	8	Orange/White	11	Gray
3	Brown	6	Orange	9	Pink	12	Gray/White

Circuit Code Identification

- Circuit codes can be identified by the insulation color in each contact configuration.
- The following table shows the identification of circuit numbers.
- When wiring, cut unnecessary wires such as the dummy insulation (white) and any unused wires.

Type	Circuit Diagram	
HS5E-KVA	Monitor Circuit: Blue	11 → 12 Blue/White
	Monitor Circuit: Pink	41 → 42 Pink/White
	Monitor Circuit: Orange	23 → 24 Orange/White
	Monitor Circuit: Brown	53 → 54 Brown/White
HS5E-KVD	Monitor Circuit: Blue	11 → 12 Blue/White
	Monitor Circuit: Pink	41 → 42 Pink/White
	Monitor Circuit: Orange	21 → 22 Orange/White
	Monitor Circuit: Brown	51 → 52 Brown/White

The contact configuration shows the status where the actuator is inserted and the switch is locked.

ø22 HW Key Switch

Key features:

- Key Selector Switches with Direct Opening Action Mechanism
- High-security Pin Tumbler Key
- The NC contact is opened by direct opening action mechanism ⊖. Mode selection enables easy construction of safety systems.
- The single key enables the hostage control of combining HW series key selector switch (pin tumbler type) and HS5E-K interlock key switch. High-security pin tumbler key is used. Sixteen types of key numbers are available.
- Selection of 2-position and 3-position, maintained, spring-return types and key retained variety is available.
- Degree of Protection: IP65 (IEC60529)

Contact Block Mounting Position

For contact block mounting position, see the figure to the right of the table.
Each key selector switch is supplied with two keys.
Key number 500 is supplied as the default key in table above (500 not added to part number).
To order additional key types, specify key number at end of part number (special order).
Example: HS5E-KVA003-2A501
501 to 515
Note: The key number is engraved on the cylinder.

Three-position Key Switch (45°)

	②	NC					
	③	NC					
	☆ ④	NC					

Contact Block Mounting Position

On the contact arrangement marked with ☆ in the table above, the rated current (load switching current) is reduced to a half of the rated current of the contact block. The rated insulation voltage and the rated thermal current remain unchanged.

For models with ☆, contacts may overlap when the operator position is changed.

For contact block mounting position, see the figure on the right.

Each key selector switch is supplied with two keys.

15 types of key numbers are available in addition to standard (500) key.

Key number 500 is supplied as the default key in table above (500 not added to part number).

To order additional key types, specify key number at end of part number (special order).

Example: HS5E-KVA003-2A501

501 to 515

Note: The key number is engraved on the cylinder.

Dimensions (mm)

Anti-rotation Ring and Panel cut-out

Align the TOP marking on the operator and the  mark on the anti-rotation ring with the recess in the mounting panel.

Replacement Parts

Item	Material	Part No.	Remarks
	1NO contact 	HW-G10	Housing color: blue Push rod: green
	1NC contact 	HW-G01	Housing color: purple Push rod: red
	Nylon	TW-DB	Used when using contact blocks in odd numbers.
	Metal (nickel-plated brass)	LW9Z-SK-500	Standard key number
		LW9Z-SK- 	Key number 501 to 515
	Polyamide	HW9Z-LN	Black
	Polyacetal	HW9Z-LS	Yellow One safety lever lock is supplied as standard.
	Polyacetal	HW9Z-WM	Black

Accessories

Item	Material	Part No.	Dimensions
	Metal (brass) Weight: approx. 150g	MW9Z-T1	Used to tighten the locking ring when installing the HW switch onto a panel. Tighten the locking ring to a torque of 2.0 N·m. 
	Metal (copper-zinc plating) / Nitrile Rubber	TW-KC1	Used to remove the contact block and the transformer, and also to install or remove the pilot light lens. Also used to adjust the panel thickness (1, 1.6, 2, 2.3, 3.2, and 5 mm). 
	Ring: Nylon Gasket: Nitrile Rubber	HW9Z-RL	Used to prevent the operator from turning. 

Item	Material	Part No.	Dimensions
Padlock Cover 	Body: Polyarylate Gasket: Nitrile Rubber	HW9Z-KL1	

To install the marking plate on a nameplate, see Fig. 1.

To remove the marking plate, insert a flat screwdriver between the marking plate and nameplate as shown in Fig. 2.

When using a nameplate, mounting panel thickness is decreased by 1.5 mm.

When an anti-rotation ring on the nameplate is not required, remove the projection using pliers as shown in Fig. 2.

Operating Instructions

Applicable Wiring

- The applicable wire size is 14 AWG maximum (Solid wire 16 AWG max.). One or two wires can be connected.

Be sure to use an insulation tube or cover on the crimping part of the crimping terminal to prevent electrical shocks.

Applicable Crimping Terminal

Crimping Terminal for ①

Crimping Terminal for ②

Solid Wire

- Tighten the M3.5 terminal screw to a recommended tightening torque of 1.0 to 1.3 N·m.

HS7A-DMC Magnetic Safety Switches

Key features:

- Compact size and easy positioning.
- Combination with proprietary relay modules achieves safety category 4 (EN954-1).
- Compact size (7 × 16 × 51mm)
- Positioning for installation is easy.
- Up to 36 sets can be connected.
(safety relay module: HR1S-DME)
- Degree of protection: IP67

Part Numbers

HS7A Non-contact Magnetic Interlock Switches

Note: When the transfer time between the actuator's Sao-Sar is 500 ms or longer, the time lag is detected as an error.

Operation Area

HS7A-DMP Magnetic Safety Switches

Key features:

- Three-contact models.
Auxiliary contacts enable PLCs to monitor the door status.
- Operation signals from auxiliary contacts can be read directly by controllers such as PLCs, allowing for monitoring HS7A-DMP non-contact interlock switches.
- Ideal for installation on guard doors where positioning is difficult.
- Conformable up to safety category 4 (EN ISO 13849-1)
(Combining with proprietary safety relay module achieves safety category 4.)
- A maximum of 36 sets can be connected (safety relay module: HR1S-DME)
- Degree of protection: IP67

The HS7A-DMP non-contact interlock switches can be used as interlock switches when used in combination with safety relay modules specified by IDEC.

Operation Area

HS3A Non-contact RFID Safety Switches

Key features:

- RFID non-contact interlock switch, Category 4 and PLe (EN/ISO 13849-1) compliant.
- The sensor head with built-in safety function (redundant solid state output with internal monitoring) eliminates the need for a designated safety module.
- RFID ensures detection of slow-moving, open, sliding, and rattling doors.
- Multicode and unicode sensor heads are available. Unicode sensor head (one sensor head corresponds to one actuator) prevents tampering with the use of an unassigned spare actuator.
- Sensor head can be installed in 5 directions.
- Degree of protection IP67. Actuator IP67, IP69K (Note)

Note: IP69K is a degree of protection specified by Deutsches Institut für Normung (DIN), DW 40050 Part 9 for hot and high-pressure water.

Part Numbers
HS3A Non-contact RFID Safety Switches

Outputs	Type	Part Number
Safety output: 2	Multicode	HS3A-H21M4
Monitor output: 1	Unicode	HS3A-H21U4

Accessories

Name		Part Number	Remarks	
Actuator		HS9Z-ZH31	Actuator for both multicode and unicode sensor heads. Supplied with two M5 × 10 mounting screws (stainless steel)	
Terminal Plug (For serial connection)		HS9Z-H3TP	Used on Y-branch connector when connecting two or more switches in series.	
Y-branch Connector (For serial connection)		HS9Z-H3YD	Used when connecting two or more switches in series. Plug connector: 8-pin (switch side), 5-pin (cable side)	
 M12 Plug Connection Cable	 For connecting two or more switches in series	5-pin, 5m	Used when connecting two or more switches in series. 5-pin plug connector is provided at one end.	
		5-pin, 10m		HS9Z-H3F510

Wiring Diagram

When using a single HS3A

When using a single HS3A, connect as shown in the figure below (Note). The OUT output can be connected to a control system, to a PLC for example, as a monitoring output. The HS3A can be reset via the RST input. To reset, apply 24V DC for at least 3 seconds. When not using the RST input, connect the RST input to 0V.

Safety Output Response Time

Note: The time required for the safety output to turn off after the actuator moves outside the operating distance of the HS3A switch.

Note: Safety performance of the actual system is determined by performing a risk assessment on the entire system. Depending on the risk level the system may entail, K1 and K2 need to be monitored to prevent serious accidents.

When using two or more HS3A in series

A maximum of 20 can be connected in series.

Pay attention to the contact resistance at the connection points.

The HS3A switches can be connected in series using plug connection cables and Y-branch connectors as shown in the figure below (Note). When any of the HS3A switches detects that the safety guard is open, or when a failure has occurred on any of the switches, the system turns off the machine. However, the external control system cannot detect which safety guard is open or where a failure has occurred.

The HS3A can be reset via the RST input. To reset, apply 24V DC for at least 3 seconds. When not using the RST input, connect the RST input to 0V.

Safety Output Response Time

In the following diagram, HR2S-301P safety relay module is connected to the HS3A. RST input of HS3A is not used.

Operation Distance and Response Time

When installing the HS3A, ensure the safety of the door opening area by paying attention to the operation distance (Table 1) and response time (Table 2) shown below.

Table 1: Operation Distance ¹

Distance	Value (mm)		
	Min.	Typ.	Max.
Turn-on distance	—	15 ²	—
Assured turn-on distance Sa0	13	—	—
Switching hysteresis	1.5	2.5	—
Assured turn-off distance Sar	—	—	58

1. When the off-center displacement of the interlock switch (sensor head) and actuator is 0 mm.
2. When surface-mounted on aluminum. When using by embedding in metal, pay attention to the operation distance affected by the metal. In non-metallic environment, the typical turn-on distance increases to 30mm.

Table 2: Response Time

Response Time	When connecting a single switch (max.)	260 ms (actuator removed)
		150 ms (missing enabling input IA/IB)
		150 ms (non-identical enabling input state at IA/IB)
		300 ms (short-circuit or cross-circuit at OA/OB, or internal fault)
	When connecting two or more switches (max.)	360 ms (actuator removed)
		250 ms (missing signal enabling input IA/IB)
		400 ms (non-identical enabling input state at IA/IB)
		400 ms (short-circuit or cross circuit at OA/OB or internal fault)

Note: To ensure safety, both safety outputs (OA and OB) must always be evaluated. Single-channel use of the safety outputs as shown below leads to a reduction of safety category stipulated in EN954-1.

HS5B/HS5E Door Handle Actuator

Key features:

- Easy and secure operation
- Rattling doors can be locked smoothly and securely.
- A door can be locked with an actuator by pushing and turning the handle.
- Padlock tab is provided to ensure operator safety.
- Interlock switch with or without solenoid lock can be installed.
- LED shows solenoid status
(when using HS5E-□44L□□-G).

Part Numbers

Description		Ordering Type No.	Remarks	
Handle Unit	For right-hand door	HS9Z-DH5RH	Choose according to the required opening side.	
	For left-hand door	HS9Z-DH5LH		
Switch Cover Unit		HS9Z-DH5C	Used for installing the interlock switch inside.	
HS5B Installation Kit		HS9Z-DH5B	Contains a mounting plate and two spacers.	
Rear Unlocking Button Kit ¹		HS9Z-FL53	Contains a button with base plate and a connecting rod	Mounting panel thickness (X): 20 ≤ X ≤ 30mm ²
		HS9Z-FL54		Mounting panel thickness (X): 30 ≤ X ≤ 40mm ²

-
1. Use the kit in combination with the HS5E-□44L□□-G rear unlocking button type interlock switch.

2. Mounting panel is a frame or a panel.

Parts Description

Specifications

Applicable Interlock Switch	HS5B Metal Head Interlock Switch ¹ HS5E Rear Unlocking Button Type Interlock Switch with Solenoid ²
Operating Temperature	-25 to +70°C (no freezing)
Mechanical Durability	100,000 operations minimum
Applicable Shackle Diameter of Padlock	ø6 to 7.5 mm
Withstand Load of Padlock Tab	30N maximum
Handle Operation Angle	77° (removed position ↔ inserted position)
Insulation Resistance (500V DC megger)	Between live and dead metal parts: 100 MΩ minimum Between terminals of different poles: 100 MΩ minimum.

1. HS5B-□□ZB, HS5B-□□ZBM
2. HS5E-□44L□□-G

Interlock switch is not supplied with the actuator and must be ordered separately.
For the specifications of interlock switches, see pages XX, XX, and XX.

Rotational handle actuator can be inserted/removed smoothly on rattling doors.

Conventional Sliding Actuator

IDEC's Door Handle Actuator

Rattling doors can be locked smoothly and securely.

The door can be locked and unlocked by pushing and turning the handle.

The actuator can be inserted into the interlock switch by pushing and turning the front handle. The actuator can be removed from the interlock switch by turning the front handle.

The rear handle can remove the actuator, but cannot insert the actuator.

Because the handle can be turned only while it is pushed, the actuator is prevented from hitting the switch cover unit.

Sliding doors can also be locked securely.

Padlockable tab ensures operator's safety.

When padlocks are installed on the padlock tab, the machine cannot be started because the actuator entry slot is blocked and the actuator cannot enter the interlock switch. By requiring all operators to have their own padlock and installing them on the door handle actuator before entering the hazardous area, the door will not be closed unless all padlocks are removed—i.e. all operators have left the hazardous area.

Note: Operators must observe rules in the workplace in order to ensure safety. Residual risk such as failure to install padlocks must be taken into consideration.

Interlock switch with/without solenoid locking can be selected.

Panel Cut-out

HS9Z-DH5RH right-hand door handle unit

When using the HS5E-□4L□□-G on the mounting panel of 3 mm or less in thickness (use the rear unlocking button).

When using the HS5B-□Z
(mounting panel thickness $X \leq 70\text{mm}$).

Mounting Position Tolerance

When using the HS5E-□44L□□-G on the mounting panel of 20 to 40 mm in thickness.

- Use the rear unlocking button kit (HS9Z-FL5□).
- In the figure shown on the right, □40mm frame is used.

HS9Z-DH5LH left-hand door handle unit

When using the HS5E-□4L□□-G on the mounting panel of 3 mm or less in thickness (use the rear unlocking button).

When using the HS5B-□Z
(mounting panel thickness $X \leq 70\text{mm}$).

When using the HS5E-□44L□□-G on the mounting panel of 20 to 40 mm in thickness.

- Use the rear unlocking button kit (HS9Z-FL5□).
- In the figure shown on the right, □40mm frame is used.

Note 1: Required when using the HS5E-□□4L-□□-G.
Not required when using the HS5B-□□□Z (without locking function).

Note 2: Ensure that the hole in the mounting panel does not interfere with the rear handle shaft.

Rear Unlocking Button Kit (HS9Z-FL53/HS9Z-FL54) (Use with the HS5E-*44L**-G Interlock Switch)

HS5B Installation Kit (HS9Z-DH5B)

Note: The illustration kit contains the aluminum mounting plate shown above and two spacers.
