

Kycon Reaches New Heights in HDMI™ Connector Line

San Jose, CA – Kycon expands their HDMI™ connector series upward by adding a vertical and a stacked version to their existing KDMIX Series. Both the vertical and the stacked connectors enable the next generation interface for end consumer products such as digital televisions, set-top boxes, and DVD players.

Kycon's vertical and stacked HDMI™ connectors provide the same standard features as the traditional version, while offering designers additional product design flexibility. Both carry up to 10.2 Gb/s of uncompressed audio and video, are fully shielded for ESD protection and RoHS compliant. They offer the standard 19-pin connector (dual connectors for the stacked version), and are available with dual side panel-mounting flanges.

Kycon continues to stack up well against the competition, achieving #2 Bishop ranking for customer satisfaction for three years and running. While continually broadening their product line, including customized solutions, Kycon maintains clear focus on quality, while upholding world-class service and support.
