(1) Size for these surface mount items refers to common industry length and width dimensions of the device surface area. Example: 0402 = .04"×.02"

(2) In some cases for these categories the ratings, agency approvals and specifications vary by part number and are presented here as ranges representing the whole series. Please refer to product data in our datasheets for detailed information by part number. * Please refer to data sheet for detailed specifications.

(1) Size for these surface mount items refers to common industry length and width dimensions of the device surface area. Example: 0402 = .04"×.02"

(2) In some cases for these categories the ratings, agency approvals and specifications vary by part number and are presented here as ranges representing the whole series. Please refer to product data in our datasheets for detailed information by part number. * Please refer to data sheet for detailed specifications.

Fuse Characteristics, Terms and Consideration Factors

The purpose of this introductory section is to promote a better understanding of both fuses and common application details within circuit design.

ttelfuse

ertise Applied Answers Delivered

The fuses to be considered are current sensitive devices designed to serve as the intentional weak link in the electrical circuit. Their function is to provide protection of discrete components, or of complete circuits, by reliably melting under current overload conditions. This section will cover some important facts about fuses, selection considerations and standards.

The application guidelines and product data in this guide are intended to provide technical information that will help with application design. *The fuse parameters and application concepts presented should be well understood in order to properly select a fuse for a given application.*

Since these are only a few of the contributing parameters, application testing is strongly recommended and should be used to verify performance in the circuit / application.

Littelfuse reserves the right to make changes in product design, processes, manufacturing location and information without notice. For current Littelfuse product infomation, please visit our web site at www.littelfuse.com.

AMBIENT TEMPERATURE: Refers to the temperature of the air immediately surrounding the fuse and is not to be confused with "room temperature." The fuse ambient temperature is appreciably higher in many cases, because it is enclosed (as in a panel mount fuseholder) or mounted near other heat producing components, such as resistors, transformers, etc.

BREAKING CAPACITY: Also known as interrupting rating or short circuit rating, this is the maximum approved current which the fuse can safely break at rated voltage. Please refer to the interrupting rating definition of this section for additional information.

CURRENT RATING: The nominal amperage value of the fuse. It is established by the manufacturer as a value of current which the fuse can carry, based on a controlled set of test conditions (See RE-RATING).

Catalog Fuse part numbers include series identification and amperage ratings. Refer to the FUSE SELECTION GUIDE section for guidance on making the proper choice.

RE-RATING: For 25°C ambient temperatures, it is recommended that fuses be operated at no more than 75% of the nominal current rating established using the controlled test conditions. These test conditions are part of UL/CSA/ANCE (Mexico) 248-14 "Fuses for Supplementary Overcurrent Protection," whose primary objective is to specify common test standards necessary for the continued control of manufactured items intended for protection against fire, etc. Some common variations of these standards include: fully enclosed fuseholders, high contact resistances, air movement, transient spikes, and changes in connecting cablesize (diameter and length). Fuses are essentially temperature-sensitive devices. Even

small variations from the controlled test conditions can greatly affect the predicted life of a fuse when it is loaded to its nominal value, usually expressed as 100% of rating.

The circuit design engineer should clearly understand that the purpose of these controlled test conditions is to enable fuse manufacturers to maintain unified performance standards for their products, and he must account for the variable conditions of his application. To compensate for these variables, the circuit design engineer who is designing for trouble-free, long-life fuse protection in his equipment generally loads his fuse not more than 75% of the nominal rating listed by the manufacturer, keeping in mind that overload and short circuit protection must be adequately provided for.

The fuses under discussion are temperature-sensitive devices whose ratings have been established in a 25°C ambient. The fuse temperature generated by the current passing through the fuse increases or decreases with ambient temperature change.

The ambient temperature chart in the FUSE SELECTION GUIDE section illustrates the effect that ambient temperature has on the nominal current rating of a fuse. Most traditional Slo-Blo[®] Fuse designs use lower melting temperature materials and are, therefore, more sensitive to ambient temperature changes.

DIMENSIONS: Unless otherwise specified, dimensions are in inches.

The fuses in this catalog range in size from the approx. 0402 chip size $(.041"L \times .020"W \times .012"H)$ up to the 5 AG, also commonly known as a"MIDGET" fuse (13/32"Dia.×11/2" Length). As new products were developed throughout the years, fuse sizes evolved to fill the various electrical circuit protection needs.

The first fuses were simple, open-wire devices, followed in the 1890's by Edison's enclosure of thin wire in a lamp base to make the first plug fuse. By 1904, Underwriters Laboratories had established size and rating specifications to meet safety standards. The renewable type fuses and automotive fuses appeared in 1914, and in 1927 Littelfuse started making very low amperage fuses for the budding electronics industry.

The fuse sizes in following chart began with the early "Automobile Glass" fuses, thus the term "AG". The numbers were applied chronologically as different manufacturers started making a new size: "3AG," for example, was the third size placed on the market. Other non-glass fuse sizes and constructions were determined by functional requirements, but they still retained the length or diameter dimensions of the glass fuses. Their designation was modified to AB in place of AG, indicating that the outer tube was constructed from Bakelite, fibre, ceramic, or a similar material other than glass. The largest size fuse shown in the chart is the 5AG, or "MIDGET," a name adopted from its use by the electrical industry and the National Electrical Code range which normally recognizes fuses of 9/16"×2" as the smallest standard fuse in use.

Fuse Characteristics, Terms and Consideration Factors (continued)

length or diameter dimensions of the glass fuses. Their designation was modified to AB in place of AG, indicating that the outer tube was constructed from Bakelite, fibre, ceramic, or a similar material other than glass. The largest size fuse shown in the chart is the 5AG, or "MIDGET," a name adopted from its use by the electrical industry and the National Electrical Code range which normally recognizes fuses of $9/16" \times 2"$ as the smallest standard fuse in use.

| FUSE SIZES | | | | | | | | | | | |
|------------|---------|------------|--------|------------|--|--|--|--|--|--|--|

| 7AG | 1/4 | .250 | 7/8 | .875 | | | | | | | |
| 8AG | 1/4 | .250 | 1 | 1 | | | | | | | |

TOLERANCES: The dimensions shown in this catalog are nominal. Unless otherwise specified, tolerances are applied as follows. Tolerances do not apply to lead lengths:

 \pm .010" for dimensions to 2 decimal places.

 \pm .005" for dimensions to 3 decimal places.

Contact Littelfuse should you have questions regarding metric system and fractional tolerances.

FUSE CHARACTERISTICS: This characteristic of a fuse design refers to how rapidly it responds to various current overloads. Fuse characteristics can be classified into three general categories: very fast-acting, fast-acting, or Slo-Blo[®] Fuse. The distinguishing feature of Slo-Blo[®] fuses is that these fuses have additional thermal inertia designed to tolerate normal initial or start-up overload pulses.

FUSE CONSTRUCTION: Internal construction may vary depending on ampere rating. Fuse photos in this catalog show typical construction of a particular ampere rating within the fuse series.

FUSEHOLDERS: In many applications, fuses are installed in fuseholders. These fuses and their associated fuseholders are not intended for operation as a "switch" for turning power "on" and "off ".

INTERRUPTING RATING: Also known as breaking capacity or short circuit rating, the interrupting rating is the maximum approved current which the fuse can safely interrupt at rated voltage. During a fault or short circuit condition, a fuse may receive an instantaneous overload current many times greater than its normal operating current. Safe operation requires that the fuse remain intact (no explosion or body rupture) and clear the circuit.

Interrupting ratings may vary with fuse design and range from 35 amperes for some 250VAC metric size (5×20mm) fuses up to 200,000 amperes for the 600VAC KLK series. Information on other fuse series can be obtained from the Littelfuse

Fuses listed in accordance with UL/CSA/ANCE 248 are

required to have an interrupting rating of 10,000 amperes at 125V, with some exceptions (See STANDARDS section) which, in many applications, provides a safety factor far in excess of the short circuit currents available.

NUISANCE OPENING: Nuisance opening is most often caused by an incomplete analysis of the circuit under consideration.

Of all the "Selection Factors" listed in the FUSE SELECTION GUIDE, special attention must be given to items 1, 3, and 6, namely, normal operating current, ambient temperature, and pulses.

For example, one prevalent cause of nuisance opening in conventional power supplies is the failure to adequately consider the fuse's nominal melting l²t rating. The fuse cannot be selected solely on the basis of normal operating current and ambient temperature. In this application, the fuse's nominal melting l²t rating must also meet the inrush current requirements created by the input capacitor of the power supply's smoothing filter.

The procedure for converting various waveforms into I²t circuit demand is given in the FUSE SELECTION GUIDE. For trouble-free, long-life fuse protection, it is good design practice to select a fuse such that the I²t of the waveform is no more than 20% of the nominal melting I²t rating of the fuse. Refer to the section on PULSES in the FUSE SELECTION GUIDE.

RESISTANCE: The resistance of a fuse is usually an insignificant part of the total circuit resistance. Since the resistance of fractional amperage fuses can be several ohms, this fact should be considered when using them in low-voltage circuits. Actual values can be obtained by contacting Littelfuse.

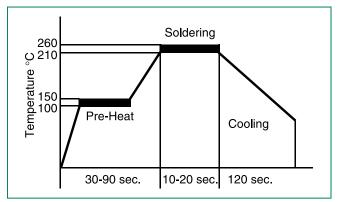

Most fuses are manufactured from materials which have positive temperature coefficients, and, therefore, it is common to refer to cold resistance and hot resistance (voltage drop at rated current), with actual operation being somewhere in between.

Cold resistance is the resistance obtained using a measuring current of no more than 10% of the fuse's nominal rated current. Values shown in this publication for cold resistance are nominal and representative. The factory should be consulted if this parameter is critical to the design analysis.

Hot resistance is the resistance calculated from the stabilized voltage drop across the fuse, with current equal to the nominal rated current flowing through it. Resistance data on all Littlefuse products are available on request. Fuses can be supplied to specified controlled resistance tolerances at additional cost.

SOLDERING RECOMMENDATIONS: Since most fuse constructions incorporate soldered connections, caution should be used when installing those fuses intended to be soldered in place. The application of excessive heat can reflow the solder within the fuse and change its rating. Fuses are heat-sensitive components similar to semiconductors, and the use of heat sinks during soldering is often recommended.

Fuse Characteristics, Terms and Consideration Factors (continued)

telfuse

ertise Applied | Answers Delivered

Lead-Free Soldering Parameters (most instances): Wave Solder — 260°C, 10 seconds max Reflow Solder — 260°C, 30 seconds max

TEST SAMPLING PLAN: Because compliance with certain specifications requires destructive testing, these tests are selected on a statistical basis for each lot manufactured.

TIME-CURRENT CURVE: The graphical presentation of the fusing characteristic, time-current curves are generally average curves which are presented as a design aid but are not generally considered part of the fuse specification. Time-current curves are extremely useful in defining a fuse, since fuses with the same current rating can be represented by considerably different time-current curves. The fuse specification typically will include a life requirement at 100% of rating and maximum opening times at overload points (usually 135% and 200% of rating depending on fuse standard characteristics). A time-current curve represents average data for the design; how ever, there may be some differences in the values for any one given production lot. Samples should be tested to verify performance, once the fuse has been selected.

UNDERWRITERS LABORATORIES: Reference to "Listed by Underwriters Laboratories" signifies that the fuses meet the requirements of UL/CSA/ANCE 248-14 "Fuses for Supplementary Overcurrent Protection". Some 32 volt fuses (automotive) in this catalog are listed under UL Standard 275. Reference to "Recognized under the Component Program of Underwriters Laboratories" signifies that the item is recognized under the component program of Underwriters Laboratories and application approval is required.

VOLTAGE RATING: The voltage rating, as marked on a fuse, indicates that the fuse can be relied upon to safely interrupt its rated short circuit current in a circuit where the voltage is equal to, or less than, its rated voltage.

This system of voltage rating is covered by N.E.C. regulations and is a requirement of Underwriters Laboratories as a protection against fire risk. The standard voltage ratings used by fuse manufacturers for most smalldimension and midget fuses are 32, 63, 125, 250 and 600.

In electronic equipment with relatively low output power supplies, with circuit impedance limiting short circuit currents to values of less than ten times the current rating of the fuse, it is common practice to specify fuses with 125 or 250 volt ratings for secondary circuit protection of 500 volts or higher.

As mentioned previously (See RE-RATING), fuses are sensitive to changes in current, not voltage, maintaining their "status quo" at any voltage up to the maximum rating of the fuse. It is not until the fuse element melts and arcing occurs that the circuit voltage and available power become an issue. The safe interruption of the circuit, as it relates to circuit voltage and available power, is discussed in the section on INTERRUPTING RATING.

To summarize, a fuse may be used at any voltage that is less than its voltage rating without detriment to its fusing characteristics. Please contact the factory for applications at voltages greater than the voltage rating.

DERIVATION OF NOMINAL MELTING I²**t**: Laboratory tests are conducted on each fuse design to determine the amount of energy required to melt the fusing element. This energy is described as nominal melting I²t and is expressed as "Ampere Squared Seconds" (A² sec.).

A pulse of current is applied to the fuse, and a time measurement is taken for melting to occur. If melting does not occur within a short duration of about 8 milliseconds (0.008 seconds) or less, the level of pulse current is increased. This test procedure is repeated until melting of the fuse element is confined to within about 8 milliseconds.

The purpose of this procedure is to assure that the heat created has insufficient time to thermally conduct away from the fuse element. That is, all of the heat energy (I²t) is used, to cause melting. Once the measurements of current (I) and time (t) are determined, it is a simple matter to calculate melting I²t. When the melting phase reaches completion, an electrical arc occurs immediately prior to the "opening" of the fuse element.

Clearing I^2t = Melting I^2t + arcing I^2t

The nominal l²t values given in this publication pertain to the melting phase portion of the "clearing" or "opening". Alternatively the time can be measured at 10 times of the rated current and the l²t value is calculated like above.

Fuse Selection Checklist

The application guidelines and product data in this guide are intended to provide technical information that will help with application design. Since these are only a few of the contributing parameters, application testing is strongly recommended and should be used to verify performance in the circuit/application.

Many of the factors involved with fuse selection are listed below. For additional assistance with choosing fuses appropriate to you requirements, contact your Littelfuse products reprentative.:

Selection Factors

- 1. Normal operating current
- 2. Application voltage (AC or DC)
- 3. Ambient temperature
- 4. Overload current and length of time in which the fuse must open
- 5. Maximum available fault current
- 6. Pulses, Surge Currents, Inrush Currents, Start-up Currents, and Circuit Transients
- 7. Physical size limitations, such as length, diameter, or height
- 8. Agency Approvals required, such as UL, CSA, VDE, METI, MITI or Military
- 9. Fuse features (mounting type/form factor, ease of removal, axial leads, visual indication, etc.)
- 10. Fuseholder features, if applicable and associated re-rating (clips, mounting block, panel mount, PC board mount, R.F.I. shielded, etc.)
- 11. Application testing and verification prior to production

Littelfuse is at your service to help solve your electrical protection problems. When contacting Littelfuse sales engineers, please have all the requirements of your applications available. Requests for quotes or assistance in designing or selecting special types of circuit protection components for your particular applications are also welcome. In the absence of special requirements, Littelfuse reserves the right to make appropriate changes in design, process, and manufacturing location without prior notice. **1. NORMAL OPERATING CURRENT:** The current rating of a fuse is typically derated 25% for operation at 25°C to avoid nuisance blowing. For example, a fuse with a current rating of 10A is not usually recommended for operation at more than 7.5A in a 25°C ambient. For additional details, see RE-RATING in the previous section and AMBIENT TEMPERATURE below.

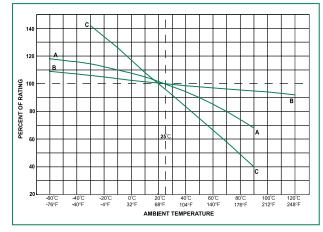

2. APPLICATION VOLTAGE: The voltage rating of the fuse must be equal to, or greater than, the available circuit voltage. For exceptions, see VOLTAGE RATING.

3. AMBIENT TEMPERATURE: The current carrying capacity tests of fuses are performed at 25°C and will be affected by changes in ambient temperature. The higher the ambient temperature, the hotter the fuse will operate, and the shorter its life. Conversely, operating at a lower temperature will prolong fuse life. A fuse also runs hotter as the normal operating current approaches or exceeds the rating of the selected fuse. Practical experience indicates fuses at **room temperature** should last indefinitely, if operated at no more than 75% of catalog fuse rating.

Ambient temperature effects are in addition to the normal re-rating, see example. Example: Given a normal operating current of 2.25 amperes in an application using a 229 series fuse at room temperature, then:

Catalog Fuse Rating = $\frac{\text{Normal Operating Current}}{0.75}$ $\frac{2.25 \text{ Amperes}}{-0.75} = 3 \text{ Amp Fuse (at 25°C)}$

This charts shows typical ambient temperature effects on current carrying capacity of Littelfuse products. For specific re-rating information, please consult the product data sheet www.littelfuse.com or contact a Littelfuse representative.

Curve A: Thin-Film Fuses and 313 Series (.010 to .150A)

Curve B: FLAT-PAK[®], TeleLink[®], Nano^{2®}, PICO[®], Blade Terminal and other leaded and catridge fuses

Curve C: Resettable PTC's

Fuse Selection Checklist (continued)

telfuse

ertise Applied | Answers Delivered

4. OVERLOAD CURRENT CONDITION: The current level for which protection is required. Fault conditions may be specified, either in terms of current or, in terms of both current and maximum time the fault can be tolerated before damage occurs. Time-current curves should be consulted to try to match the fuse characteristic to the circuit needs, while keeping in mind that the curves are based on average data.

5. MAXIMUM FAULT CURRENT: The Interrupting Rating of a fuse must meet or exceed the Maximum Fault Current of the circuit.

6. PULSES: The general term "pulses" is used in this context to describe the broad category of wave shapes referred to as "surge currents", "start-up currents", "inrush currents", and "transients". Electrical pulse conditions can vary considerably from one application to another. Different fuse constructions may not react the same to a given pulse condition. Electrical pulses produce thermal cycling and possible mechanical fatigue that could affect the life of the fuse. Initial or start-up pulses are normal for some applications and require the characteristic of a Slo-Blo® fuse. Slo-Blo® fuses incorporate a thermal delay design to enable them to survive normal start-up pulses and still provide protection against prolonged overloads. The startup pulse should be defined and then compared to the timecurrent curve and I²t rating for the fuse. Application testing is recommended to establish the ability of the fuse design to withstand the pulse conditions.

Nominal melting I²t is a measure of the energy required to melt the fusing element and is expressed as "Ampere Squared Seconds" (A² Sec.). This nominal melting I²t, and the energy it represents (within a time duration of 8 milliseconds [0.008 second] or less and 1 millisecond [0.001 second]or less for thin film fuses), is a value that is constant for each different fusing element. Because every fuse type and rating, as well as its corresponding part number, has a different fusing element, it is necessary to determine the I²t for each. This I²t value is a parameter of the fuse itself and is controlled by the element material and the configuration of the fuse element. In addition to selecting fuses on the basis of "Normal Operating Currents", "Re-rating", and "Ambient Temperature" as discussed earlier, it is also necessary to apply the l²t design approach. This nominal melting l²t is not only a constant value for each fuse element design, but it is also independent of temperature and voltage. Most often, the nominal melting I²t method of fuse selection is applied to those applications in which the fuse must sustain large current pulses of a short duration. These high-energy currents are common in many applications and are critical to the design analysis.

The following example should assist in providing a better understanding of the application of I²t.

EXAMPLE: Select a 125V, very fast-acting PICO®II fuse that is capable of withstanding 100,000 pulses of current (I) of the pulse waveform shown in Figure 1.

The normal operating current is 0.75 ampere at an ambient temperature of 25°C.

Step 1 — Refer to Chart 1 and select the appropriate pulsewaveform, which is waveform (E) in this example. Place the applicable value for peak pulse current (i_p) and time (t) into the corresponding formula for waveshape (E), and calculate the result, as shown:

$$I^{2}t = \frac{1}{5} \quad (i_{p}) = I^{2}t = \frac{1}{5} \quad (i_{p})^{2}t$$
$$\frac{1}{5} \times 8^{2} \times .004 = 0.0512 \text{ A}^{2} \text{ Sec.}$$

This value is referred to as the "Pulse I²t".

Step 2 — Determine the required value of Nominal Melting I²t by referring to Chart 2. A figure of 22% is shown in Chart II for 100,000 occurrences of the Pulse I²t calculated in Step 1. This Pulse I²t is converted to its required value of Nominal Melting I²t as follows:

Nom. Melt l²t = Pulse l²t/.22 0.0512/.22 = 0.2327 A² Sec.

Step 3 — Examine the I²t rating data for the PICO[®] II, 125V, very fast-acting fuse. The part number 251001, 1 ampere design is rated at 0.256 A² Sec., which is the minimum fuse rating that will accommodate the 0.2327 A² Sec. value calculated in Step 2. This 1 ampere fuse will also accommodate the specified 0.75 ampere normal operating current, when a 25% derating factor is applied to the 1 ampere rating, as previously described.

7. PHYSICAL SIZE LIMITATIONS: Please refer to the product dimensions presented in current Littelfuse product data sheets for specific information.

8. AGENCY APPROVALS: For background information about common standards, please consult the STANDARDS section of this guide or visit our Design Support web site www.littelfuse.com/design-support.html. For specific agency approval information for each Littelfuse product, please refer to the data sheets within this catalog and information presented on www.littelfuse.com. As agency approvals and standards may change, please rely on the information presented on www.littelfuse.com as current information.

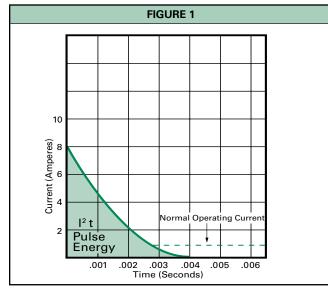

9. FUSE FEATURES: Please consult the specific product features presented within this catalog and on our web site www.littelfuse.com. For additional information and support contact your Littelfuse product representative.

10. FUSEHOLDER FEATURES AND RE-RATING: For information about the range of Littelfuse fuseholders and specific features and characteristics, please consult with a Littelfuse products representative or visit our web site www.littelfuse.com.

For 25°C ambient temperatures, it is recommended that fuseholders be operated at no more than 60% of the nominal current rating established using the controlled test

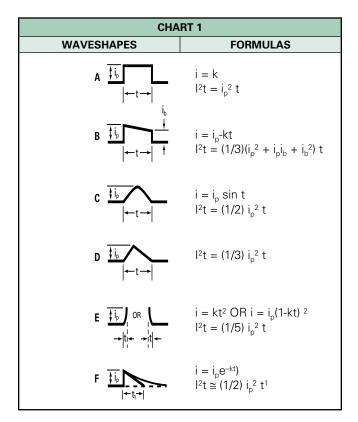

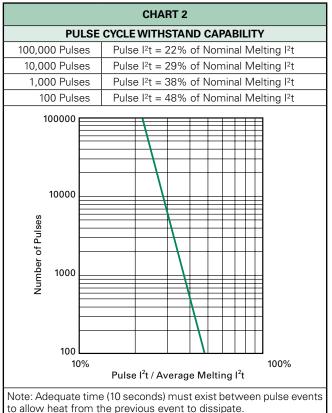

Fuse Selection Checklist (cont.)

conditions specified by Underwriters Laboratories. The primary objective of these UL test conditions is to specify common test standards necessary for the continued control of manufactured items intended for protection against fire, etc. A copper dummy fuse is inserted in the fuseholder by Underwriters Laboratories, and then the current is increased until a certain temperature rise occurs. The majority of the heat is produced by the contact resistance of the fuseholder clips. This value of current is considered to be the rated current of the fuseholder, expressed as 100% of rating. Some of the more common, everyday applications may differ from these UL test conditions as follows: fully enclosed fuseholders, high contact resistance, air movement, transient spikes, and changes in connecting cable size (diameter and length). Even small variations from the controlled test conditions can greatly affect the ratings of the fuse-holder. For this reason, it is recommended that fuseholders be derated by 40% (operated at no more than 60% of the nominal current rating established using the Underwriter Laboratories test conditions, as previously stated).

11. TESTING: The factors presented here should be considered in selecting a fuse for a given application. The next step is to verify the selection by requesting samples for testing in the actual circuit. Before evaluating the samples, make sure the fuse is properly mounted with good electrical connections, using adequately sized wires or traces. The testing should include life tests under normal conditions and overload tests Under fault conditions, to ensure that the fuse will operate properly in the circuit.

Standards

telfuse

ertise Applied | Answers Delivered

Fuse ratings and other performance criteria are evaluated under laboratory conditions and accptance criteria, as defined in one or more of the various fuse standards. It is important to understand these standards so that the fuse can be properly applied to circuit protection applications.

UL/CSA/ANCE (Mexico) 248-14 FUSES FOR SUPPLEMENTARY OVERCURRENT PROTECTION (600 Volts, Maximum) (Previously UL 198G and CSA C22.2, No. 59)

(b) UL LISTED

A UL Listed fuse meets all the requirements of the UL/ CSA/ANCE 248-14 Standard. Following are some of the requirements. UL ampere rating tests are conducted at 100%, 135%, and 200% of rated current. The fuse must carry 100% of its ampere rating and must stabilize at a temperature that does not exceed a 75°C rise.

The fuse must open at 135% of rated current within one hour. It also must open at 200% of rated current within 2 minutes for 0-30 ampere ratings and 4 minutes for 35-60 ampere ratings.

The interrupting rating of a UL Listed fuse is 10,000 amperes AC minimum at 125 volts. Fuses rated at 250 volts may be listed as interrupting 10,000 amperes at 125 volts and, at least, the minimum values shown below at 250 volts.

| Ampere Rating of Fuse | Interrupting Rating In Amperes | Voltage Rating |
|--------------------------|-----------------------------------|----------------|
| 0 to 1 | 35 | 250 VAC |
| 1.1 to 3.5 | 100 | 250 VAC |
| 3.6 to 10 | 200 | 250 VAC |
| 0.1 to 15 | 750 | 250 VAC |
| 15.1 to 30 | 1500 | 250 VAC |

Recognized Under the Component Program of Underwriters Laboratories

The Recognized Components Program of UL is different from UL Listing. UL will test a fuse to a specification requested by the manufacturer. The test points can be different from the UL Listed requirements if the fuse has been designed for a specific application. Application approval is required by UL for fuses recognized under the Component Program.

UL 275 AUTOMOTIVE GLASS TUBE FUSES (32 Volts)

UL LISTED

UL ampere ratings tests are conducted at 110%, 135%, and 200%. Interrupting rating tests are not required.

CSA Certification

CSA Certification in Canada is equivalent to UL Listing in the United States.

(DEC). The Component Acceptance Program of CSA is equivalent to the Recognition Program at UL.

METI (Japan Ministry of Economy, Trade and Industry)

METI® approval in Japan is similar to UL Recognition in the United States.

METI® has its own design standard and characteristics.

INTERNATIONAL ELECTROTECHNICAL COMMISSION (IEC)

Publication 60127, Parts 1, 2, 3, 4, 6

The IEC organization is different from UL and CSA, since IEC only writes specifications and does not certify. UL and CSA write the specifications, and are responsible for testing and certification.

Certification to IEC specifications are given by such organizations as SEMKO (Swedish Institute of Testing and Approvals of Electrical Equipment)⁽[©]), BSI (British Standards Institute) ⁽♥ and VDE (German Standard Insitute) ⁽√[®]), as well as UL and CSA.

IEC Publication 60127 defines three breaking capacity levels (interrupting rating). Low breaking capacity fuses must pass a test of 35 amperes or ten times rated current, whichever is greater, while enhanced breaking capacity fuses must pass a test of 150 amperes and high breaking capacity fuses must pass a test of 1500 amperes.

60127 Part 2

- Sheet 1 Type F Quick Acting, High Breaking Capacity
- Sheet 2 Type F Quick Acting, Low Breaking Capacity
- Sheet 3 Type T Time-Lag, Low Breaking Capacity
- Sheet 4 Style Fuses 1/4×1 1/4
- Sheet 5 Type T Time-Lag, High Breaking Capacity

Sheet 6 — Type T Time-Lag, Enhanced Breaking Capacity

The letters 'F' and 'T' represent the time-current characteristic of the fast-acting and time delay fuses. One of these letters will be marked on the end cap of the fuse.

Standards (continued)

UL/CSA/ANCE (Mexico) 248-14 vs. IEC 60127 Part 2 FUSE OPENING TIMES vs. METI/MITI®

| Percent of Rating | | | IEC TYPE F Sheet 2 (*) | | - | METI/MITI ® |
|----------------------|--------------------|--------------------|---------------------------|--------------------|--------------------|-------------------|
| 110 | 4Hr.Min. | — | — | — | — | |
| 130 | _ | _ | _ | _ | _ | 1Hr.Min. |
| 135 | 60 Minutes Max. | _ | _ | _ | _ | |
| 150 | _ | 60 Minutes Min. | 60 Minutes Min. | 60 Minutes Min. | 60 Minutes Min. | |
| 160 | — | _ | — | _ | _ | 1Hr.Max. |
| 200 | 2 Minutes Max. | _ | _ | _ | _ | 2 Minutes Max. |
| 210 | _ | 30 Minutes Max. | 30 Minutes Max. | 2 Minutes Max. | 30 Minutes Max. | |

(*) Note: The IEC Specification is written up to 10.0A. Any components above these ratings are not recognized by the IEC (although the fuses may have similar opening characteristics).

IEC also has opening time requirements at 275%, 400% and 1000%; however, the chart is used to show that fuses with the same ampere rating made to different specifications are not interchangeable. According to the IEC 60127 Standard, a one ampere-rated fuse can be operated at one ampere. A one ampere-rated fuse made to UL/CSA/ANCE 248-14 should not be operated at more than .75 ampere (25% derated — See RE-RATING section of FUSEOLOGY).

METI® does not differentiate between fast-acting and time delay characteristics.

Publication IEC 60127-4 (Universal Modular Fuse-Links [UMF])

This part of IEC 60127-4 covers both PCB through-hole and surface mount fuses. This standard covers fuses rated 32, 63, 125, and 250 volts. This standard will be accepted by UL/CSA making it the first global fuse standard. This specification uses different fusing gates than IEC 60127-2; the gates used here are 125%, 200%, and 1000%.

The fuses must not open in less than one hour at 125% of rated current and open within two minutes at 200% of rated current. The 1000% overload is used to determine the fuse characteristic. The opening time for each rating is listed below.

Type FF : Less than 0.001 sec.

Type F : From 0.001 - 0.01 sec.

Type T : From 0.01 - 0.1 sec.

Type TT : From 0.1 - 1.00 sec.

These characteristics correlate to the terminology used in IEC 60127-1.

Breaking capacity (interrupting rating) varies based on voltage rating. Parts rated at 32 & 63 volts must pass a

test of 35 amperes or ten times rated current, whichever is greater. Parts rated at 125 volts must pass a test of 50 amperes or ten times rated current, whichever is greater. Parts rated at 250 volts are further defined as either low, intermediate or high breaking. The low breaking capacity fuses must pass a test of 100 amperes rated current, while intermediate breaking capacity fuses must pass a test of 500 amperes and high breaking capacity fuses must pass a test of 1500 amperes.

MILITARY/FEDERAL STANDARDS

MIL-PRF-15160 and MIL-PRF-23419

These specifications govern the construction and performance of fuses suitable primarily for military electronic applications.

MIL-PRF-19207

This specification governs the construction and performance of fuseholders suitable for military applications.

DSSC Drawing #87108

This drawing governs the construction and performance of .177" \times .570" (2AG size) cartridge fuses and axial lead versions suitable for military applications. DSSC #87108 designation is included in the fuse end cap marking.

FEDERAL SPECIFICATION W-F-1814

This specification governs the construction and performance of fuses with high interrupting ratings that are approved for federal applications. Fuses approved to these specifications are on the Federal Qualified Products List.

Write to the following agencies for additional information on standards, approvals, or copies of the specifications.

Packaging and Part Numbering

Littelfuse Fuse Products Traditional Part Numbering System

oxxx xxxx x x x xxxxx

Example:

437 series fuse is "0437"

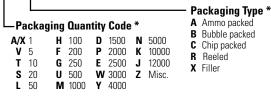

Ampere Rating Code _____

Decimal is to far right for whole number amp ratings, to far left for ratings less than one, and within center for fractional amp ratings.

Examples:

- 10A fuse is "010."
- 1/4A or 0.25A fuse is ".250"
- 1 1/2A or 1.5A fuse is "01.5"
- 1 1/4A or 1.25A fuse is "1.25"

Refer to the Electrical Characteristics tables presented in each product data sheet for specific amp rating codes

Options Codes *

- RT1 Reel and Tape, 2.062in (52.4mm) lead spacingRT2 Reel and Tape, 2.50 in (63.5mm) lead spacing
- RT3 Reel and Tape, 2.874 in (73mm) lead spacing
 - Pigtail lead type fuse
 - Indicating fuse RoHS compliant
 - Lead-free

Description

This 100% Lead-free, RoHS compliant and Halogen-free fuse series has been designed specifically to provide over current protection to circuits that see high working ambient temperatures (up to 150°C).

The general design ensures excellent temperature stability and performance reliability.

In addition to this, the high I²t values typical of the Littelfuse Ceramic Fuse family ensure high inrush current withstand capability.

Features

 Suitable for both leaded and lead-free reflow / wave soldering

Scanners

Data Modems

from -55°C to +150°C • 100% Lead-free, Halogen-Free and RoHS compliant

Operating Temperature

Applications

- LCD Displays
- Servers
- Printers

Electrical Specifications by Item

Description

The 440 Series is a 100% Lead-free, RoHS compliant and Halogen-free fuse series designed specifically to provide over-current protection to circuits that operate under high working ambient temperatures up to 150°C and high inrush currents. The general design ensures excellent temperature stability and performance reliability. This high I²t fuse series is designed to have ultra high inrush current withstand capability to avoid nuisance fuse open.

Features

- Operating Temperature from -55°C to +150°C
- Suitable for both leaded and lead-free reflow / wave soldering

Scanners

Data ModemsHard Disk Drives

100% Lead-free, RoHS soldering compliant and Halogen-free • Ultra high l²t values

Applications

- LCD Displays
- Servers
- Notebook Computers
- Printers

Description

The 469 Series is a 100% Lead-free, RoHS compliant and Halogen-free fuse series designed specifically to provide over-current protection to circuits that operate under high working ambient temperature up to 150°C.

The general design ensures excellent temperature stability and performance reliability.

The high I²t values, typical in the Littelfuse Ceramic fuse family, ensure high inrush current withstand capability.

Features

- Operating Temperature from -55°C to +150°C
- Suitable for both leaded and lead-free reflow / wave soldering
- 100% Lead-free, RoHS compliant and Halogenfree

Applications

- LCD Displays
- Servers
- Notebook Computers
- Printers

501 Series – High Current 1206 Fast-Acting Fuse

Description

The 501 Series is a 100% Lead-free, RoHS compliant and Halogen-free fuse series designed specifically to provide over- current protection to circuits that operate under high working ambient temperature up to 150°C.

The general design ensures excellent temperature stability and performance reliability.

The high I²t values which is typical in the Littelfuse Ceramic Fuse family, ensure high inrush current withstand capability.

Features

- Operating Temperature from -55°C to +150°C
- 100% Lead-free, RoHS compliant and Halogenfree

RoHS M HF c W us St.

- Designed to provide over-current protection in high current voltage regulator module (VRM) applications
- · Suitable for both leaded
- and lead-free reflow / wave soldering

Applications

- Voltage Regulator Module (VRM) Equipment
- Notebook PC
- DC-DC Converter

Notes:

2. Nominal Resistance measured with < 10% rated current.

3. Nominal Melting I²t measured at 1 msec. opening time. For other I²t data refer to chart. 4. Nominal Voltage Drop measured at rated current after temperature has stabilized and

with fuse mounted on board with 3-oz Cu trace.

Devices designed to carry rated current for 4 hours minimum. It is recommended that devices be operated continuously at no more than 80% rated current. See "Temperature Re-rating Curve" for additional re-rating information.

Devices designed to be mounted with marking code facing up.

Electrical Specifications by Item

Description

The 466 Series Fast-Acting Surface Mount Fuse (SMF) is a small (1206 size) thin-film device designed for secondary protection of circuits used in space constrained applications such as hand-held portable electronic devices.

This series is 100% lead-free and meets the requirements of the RoHS directive. New Halogen-Free 466 Series fuses are available to order using the "HF" suffix. See Part Numbering section for additional information.

Features

- Product is compatible with lead-free solders and higher temperature profiles
- Product is marked on top surface with code to allow amperage rating identification without testing
- Low profile for height sensitive applications
- Flat top surface for pickand-place operations

- Element-covering material is resistant to industry standard cleaning operations
- Lead-free, Halogen-free and RoHS compliant

Applications

Secondary protection for space constrained applications:

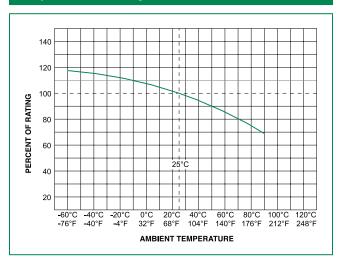

- Cell phones
- DVD players
- Battery packsDigital cameras
- Hard disk drives

Temperature Re-rating Curve

Note:

1. Re-rating depicted in this curve is in addition to the standard re-rating of 25% for continuous operation.

Example:

- For continuous operation at 70 degrees celsius, the fuse should be rerated as follows: I = (0.75)(0.80)|_{RAT} = (0.60)|_{RAT}
- The temperature derating curve represents the nominal conditions. For questions about temperature derating curve, please consult Littlefuse technical support for assistance.

Description

The 468 Series Slo-Blo[®] Surface Mount Fuse (SMF) is a small (1206 size) thin-film device designed for secondary protection of circuits used in space constrained applications such as hand-held portable electronic devices.

This series is 100% lead-free and meets the requirements of the RoHS directive. New Halogen-Free 468 Series fuses are available-to order use the "HF" suffix. See Part Numbering section for additional information.

Features

- Complies with electronic industry environmental standards for lead reduction.
- Product is compatible with lead-free solders and higher temperature profiles.
- Time delay feature withstands high inrush currents and prevents nuisance openings.
- Package is visually distinct from fastacting version for easy identification.
- Top side marking allows visual verification of amperage rating.

Applications

Secondary protection for space constrained applications:

Description

The 467 Series Fast-Acting Surface Mount Fuse (SMF) is an ultra small (0603 size) thin-film device designed for secondary protection of circuits used in space constrained applications such as hand-held portable electronic devices. This series is 100% lead-free and meets the requirements of the RoHS directive. New Halogen-Free 467 Series fuses are available-to order use the "HF" suffix. See Part Numbering section for additional information..

Rohs 🔊 HF 恥 🏵

• Element covering material

electrical performance is

identical to Littelfuse 431

and 434 Series products

• Halogen free, Lead-free

and RoHS compliant

is resistant to industry

standard cleaning operations

Features

- Compatible with leadfree solders and higher temperature profiles
- High performance materials provide improved • Mounting pad and performance in elevated ambient temperature applications
- Marked on top surface ٠ with code to allow amp rating identification without testing
- Low profile for height sensitive applications
- Flat top surface for pickand-place operations

Applications

Secondary protection for space constrained applications:

- Cell phones
- Battery packs
- Digital cameras
- DVD players
- Hard disk drives.

1. Measured at 10% of rated current, 25°C. 2. Measured at rated voltage

Temperature Rerating Curve

Note:

1. Rerating depicted in this curve is in addition to the standard derating of 25% for continuous operation.

Example:

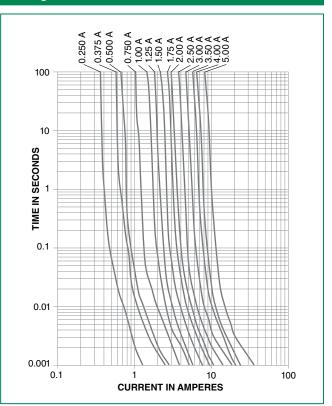

- For continuous operation at 70 degrees celsius, the fuse should be derated as follows: I = (0.75)(0.80)I_{RAT} = (0.60)I_{RAT}
- The temperature derating curve represents the nominal conditions. For questions about temperature derating curve, please consult Littelfuse technical support for assistance.

| 300% | 0.2 sec., Maximum |

Additional Information

Description

The 494 Series Fast-Acting SMF is an ultra small (0603 size) thin-film device designed for secondary protection of circuits used in space constrained applications such as hand-held portable electronic devices. This series is 100% lead-free and meets the requirements of the RoHS directive. New Halide-Free 494 Series fuses are available to order using the "HF" suffix. See Part Numbering section for additional information.

Features

- · Compatible with leadfree solders and higher temperature profiles
- High performance materials provide improved performance in elevated ambient temperature applications
- Marked on top surface with code to allow ampere rating identification without testing
- Low profile for height sensitive applications
- Flat top surface for pickand-place operations

- Element-covering material is resistant to industry standard cleaning operations
- Mounting pad and electrical performance are identical to Littelfuse 431 and 434 Series products
- Alloy-based element construction provides superior inrush withstand characteristics (I2t) over ceramic or glass-based 0603 fuse products

Applications

Secondary protection for space constrained applications:

- Cell phones
- Battery packs
- Digital cameras • DVD players
- Hard disk drives

| 300% | 0.250A | 5 secs., Maximum |
| 300% | 0.375A - 5A | 0.2 sec., Maximum |

Description

The 435 Series are fast-acting surface mount thin-film fuses. Their ultra-small size (0402 size) makes them ideal for secondary protection of circuits used in space constrained applications such as hand-held portable electronic devices.

This series is 100% lead-free and meet the requirements of the RoHS directive. New Halogen-Free 435 Series fuses are available-to order use the "HF" suffix. See Part Numbering section for additional information.

Features

- 35A interrupt rating at 32VDC
- Small size with current ratings of 0.25 to 5.0 amperes
- Maximum protection of sensitive circuits as fuses are designed to open consistently in <5sec at 200% overload.

Rohs 🗭 HF 恥 🚯

• RoHS compliant, Lead-Free and Halogen-Free

Enhanced Breaking Capacity, High I²t

Applications

Secondary protection for space constrained applications such as:

- Cell phones
- DVD players
- Battery packs
- Digital cameras
- Hard disk drives.

Description

The lead-free Nano^{2®} SMF Fuse is a very small, square surface mount fuse that is RoHS compliant, Halogen Free and 100% lead-free. This product is fully compatible with lead-free solder alloys and higher temperature profiles associated with lead-free assembly.

Features

- RoHS compliant, Leadfree and Halogen Free
- Very fast-acting
- Small size
- Wide range of current rating available (0.062A to 15A)
- Wide operating temperature range
- Low temperature de-rating

Applications

- Notebook PC
- LCD/PDPTV
- LCD monitor
- LCD/PDP panel
- LCD backlight inverter
- Portable DVD player
- Power supply
- Networking
- PC server
- Cooling fan system

- Storage system
- Telecom system
- Wireless basestation
- White goods
- Game console
- Office Automation equipment
- Battery charging circuit protection
- Industrial equipment

Electrical Specifications by Item

Description

The lead free NANO^{2®} Slo-Blo[®] fuse is RoHS compliant, Halogen Free and 100% lead-free. This product is fully compatible with lead-free solder alloys and higher temperature profiles associated with lead-free assembly. The Slo-Blo® fuse design has enhanced inrush withstand characteristics over the NANO^{2®} Fast-Acting Fuse. The unique time delay feature of this fuse design helps solve the problem of nuisance "opening" by accommodating inrush currents that normally cause a fast-acting fuse to open.

Features

- Lead-free, Halogen free and RoHS compliant
- Wide operating temperature range
- Small size
- Wide range of current ٠ ratings available
- Low temperature rerating

Applications

Secondary protection for space constrained applications:

- Notebook PC
- LCD/PDPTV
- LCD monitor
- LCD/PDP panel
- LCD backlight inverter
- Portable DVD player
- Power supply
- Networking
- PC server
- Cooling fan system

- Storage system
- Telecom system
- Wireless basestation
- White goods
- Game console
- Office Automation equipment
- Battery charging circuit protection
- Industrial equipment

Electrical Specifications by Item

Description

The NANO^{2®} Slo-Blo[®] fuse has enhanced inrush withstand characteristics over the NANO^{2®} Fast-Acting fuse. The unique time delay feature of this fuse design helps solve the problem of nuisance "opening" by accommodating inrush currents that normally cause a fast-acting fuse to open.

Features

- Small size
- Wide range of current rating available (0.375A to 12A)
- Wide operating temperature range
- Low temperature rerating
- RoHS compliant and Halogen Free

ROHS HE CES SU

Applications

- Notebook PC
- LCD/PDPTV
- LCD monitor
- LCD/PDP panel
- LCD backlight inverter
- Portable DVD player
- Power supply
- Networking
- PC server
- Cooling fan system

- Storage systemTelecom system
- Wireless basestation
- White goodsGame console
- Office Automation
- equipment
- Battery charging circuit protection
- Industrial equipment

Description

The High Current NANO^{2®} Fuse is a small square surface mount fuse that is designed to support higher current requirements of various applications.

Features

- Surface mount high current fuse
- Fully compatible with lead-free solder alloys and higher temperature profiles associated with lead-free assembly
- RoHS compliant and Halogen Free
- Available in ratings of 20 to 40 Amperes

Applications

- Voltage regulator module for PC server
- Basestation power supply
- Cooling fan system for PC server
- Storage system power

Electrical Specifications by Item

Description

The 462 series Nano^{2®} Surface Mount Fuse has time-lag current characteristics with interrupting ratings rated at 250V and 350V. It complies with IEC 60127-4 Universal Modular Fuse-Links.

Features

- Heat resistant plastic housing, UL 94 V-0
- Designed for line or low voltage applications
- Low voltage drop
- Internationally approved
- High pulse resistance
- with lead-free solders and higher temperature profiles

• Lead-free -- compatible

• Available in ratings of 0.5A to 5A

Applications

- Lighting ballast
- AC/DC adaptor primary protection
- Transformerless AC/DC converter circuit
- High DC voltage power distribution system

Description

The 485 Nano^{2®} Fuse Series is a small, fast-acting, surface mount ceramic fuse rated at a remarkable 600VDC at its small size and with 100A breaking capacity. It is primarily designed for circuit protection in high energy applications. This product is fully compatible with lead-free solder alloys and higher temperature profiles associated with lead-free assembly.

Features

- Fast-Acting / Surface mount high fuse for high voltage (up to 600VDC) applications.
- · Fully compatible with lead-free solder alloys and higher temperature profiles associated with lead-free assembly.
- Relatively high breaking capacity at 100A.
- RoHS compliant / Halogen Free
- Rating 1 3.15 Amperes.

Applications

- PC server and Telecom systems
- LCD TV inverter boards DC input protection
- Uninterruptible Power Supply (UPS) / 3-Phase **Power Supplies**
- 380VDC server / lighting in data center

Additional Information

Description

The Littelfuse 461 Series TeleLink[®] Surface Mount, Surge Resistant Fuse, offers over-current protection for a wide range of telecom applications without requiring a series resistor. When used in conjunction with a Littelfuse SIDACtor[®] Transient Voltage Suppressor (TVS) or a Greentube[™] Gas Plasma Arrestor, this combination provides a compliant solution for standards and recommendations such as GR-1089–Core, TIA-968-A, UL/ EN/IEC 60950, and ITU K.20 and K.21. The coordination requirement contained in GR-1089–Core, and ITU K.20/21 may require a series of impedance devices.

Features

- Surface mount surge resistant Slo-Blo[®] fuse
- Meet UL 60950 3rd Edition power cross requirements standard alone
- Designed to allow compliance with Telcordia GR-1089-CORE and TIA-968-A (formerly FCC Part 68) Surge Specifications
- Provide coordinated protection with Littelfuse SIDACtor[®] Transient Voltage Suppressor (TVS)or a Greentube[™] Gas Plasma
 Arrestor, without series resistors
- Designed to serve the requirements of a wide range of telecommunication and

networking equipment2A rating has improved

RoHS HF

FL (SP

- temperature rise performance under 2.2A surge current testing when compared with 1.25A rating
- Product is Halogen Free and RoHS compliant and compatible with leadfree solder and higher temperature profiles when ordered with Standard Silver Plated Brass Caps
- Standard product is RoHS Compliant and compatible with lead-free solders and higher temperature profiles

Applications

- T1/E1/J1 and HDSL2/4
- SLIC interface portion of Fiber to the Curb (FTTC) and Fiber to the Premises (FTTP)
- Non-Fiber SLIC interface for Central Office (CO) locations and Remote Terminals (RT)
- xDSL applications such as ADSL, ADSL2+, VDSL, and VDSL2+
- Ethernet 10/100/1000BaseT
- POTS applications such as modems, answering machines, telephones, fax machines, and security systems
- ISDN "U" interface
- Baystation T1/E1/J1, T3 (DS3) trunk cards

Electrical Specifications by Item

| Ampere | Ampere | | | | | Agency Approvals | |
|---------------|----------|--------------------------|--------------------------------|-----------------------------------|--------------------------------|------------------|----------|
| Rating (A) | Amp Code | Voltage Rating (V) | Interrupting Rating | Nominal Cold Resistance (Ohms) | Nominal Melting I²t (A²sec) | 77 | (|
| 0.500 | .500 | 600 | 50A @ 250 VAC | 0.560 | 0.840 ¹ | х | х |
| 1.25 | 1.25 | 600 | 60 A @600 VAC 100 A @80 VDC | .1040 | 16.5 ¹ | х | х |
| 2.00 | 002. | 600 | | .0450 | 17.5 ¹ | х | Х |

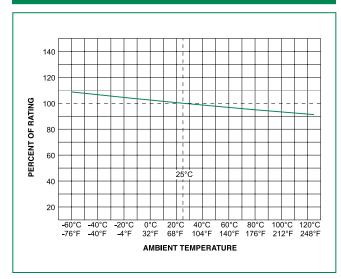

1 l²t is calculated at 10 msecs. or less. l²t at 10 times rated current has a typical value of: 24 A²sec (2.0A), 22 A²sec (1.25A), 1.3 A²sec (0.5A).

• Typical inductance <40nH up to 500 MHz.

• Resistance changes 0.5% for every °C.

· Resistance is measured at 10% rated current.

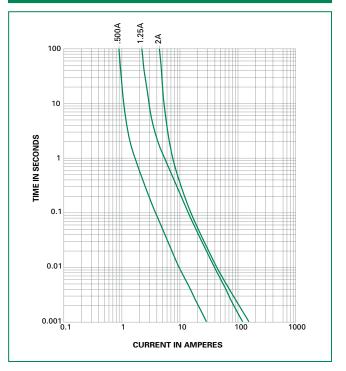

Temperature Re-rating Curve

Note:

1. Re-rating depicted in this curve is in addition to the standard re-rating of 25% for continuous operation.

GR 1089 Inter-building requirements

GR 1089 1st level lighting surge inter-building (Equipment under test can not be damaged and must continue to operate properly)

| Surge | Poak | Minimum Peak Current (A) | Max. Rise/Min. Decay (µs) | Repetitions Each Polarity | Fuse Choices |
|-------|------|-----------------------------------|------------------------------------|---------------------------------|-----------------|
| 1 | 600 | 100 | 10/1000 | 25 | 1.25, 2.0 |
| 2 | 1000 | 100 | 10/360 | 25 | 1.25, 2.0 |
| 3 | 1000 | 100 | 10/1000 | 25 | 1.25, 2.0 |
| 4 | 2500 | 500 | 2/10 | 10 | 1.25, 2.0 |
| 5 | 1000 | 25 | 10/360 | 5 | 0.5, 1.25, 2.0 |

If sufficient series resistance is used, then the 0.5 fuse may be used in test conditions 1-4.

GR 1089 2nd level lightning surge telecom port (Equipment under test shall not become a fire or electrical safety hazard)

| Surge | | Minimum Peak Current (A) | Max. Rise/Min. Decay (µs) | Repe- titions Each Polarity | Fuse Choices |
|------------------|------|--------------------------------|------------------------------------|--------------------------------------|-----------------|
| 1 | 5000 | 500 | 2/10 | 1 | 0.5, 1.25, 2.0 |
| Alter- native | 5000 | 500/8=625 | 8/10 | 1 | 0.5, 1.25, 2.0 |

The 0.5 fuse will open during these test conditions. The 1.25 & 2.0 will not open thus providing operational compliance.

GR 1089 AC power fault 1st level inter-building (fuse not allowed to open)

| Test | Vrms | Short Circuit Current (A) | Hits | Duration | Primary Protector | Fuse Choices |
|------|-----------------|------------------------------------|------|-----------|----------------------|-----------------|
| 1 | 50 | 0.33 | 1 | 15 min. | removed | 1.25, 2.0 |
| 2 | 100 | 0.17 | 1 | 15 min. | removed | 1.25, 2.0 |
| 3 | 200,400, 600 | 1 | 60 | 1 sec. | removed | 1.25, 2.0 |
| 4 | 1000 | 1 | 60 | 1 sec. | operative | 1.25, 2.0 |
| 5 | Diagram | Diagram | 60 | 5 secs. | removed | 1.25, 2.0 |
| 6 | 600 | 0.5 | 1 | 30 secs. | removed | 1.25, 2.0 |
| 7 | 440 | 2.2 | 5 | 2 secs. | removed | 1.25, 2.0 |
| 8 | 600 | 3 | 1 | 1.1 secs. | removed | 1.25, 2.0 |
| 9 | 1000 | 5 | 1 | 0.4 sec. | in place | 1.25, 2.0 |

GR 1089 AC power fault 2nd level (fuse can open but must open in a safe and controlled manner)

| Test Circuit | Vrms | Short Circuit Current (A) | Duration | Fuse |
|-----------------|---------|------------------------------------|----------|----------------|
| 1 | 120,277 | 25 | 15 min. | 0.5, 1.25, 2.0 |
| 2 | 600 | 60 | 5 secs. | 0.5, 1.25, 2.0 |
| 3 | 600 | 7 | 5 secs. | 0.5, 1.25, 2.0 |
| 4 | 100-600 | 2.2 | 15 min | 0.5, 1.25, 2.0 |
| 5 | Diagram | Diagram | 15 min. | 0.5, 1.25, 2.0 |

Fuse must open before wiring simulator fuse (MDL 2.0).

TIA -968-A (formerly FCC Part 68) Surge Waveforms (fuse can not open during type B events)

| Surge | Voltage (V) | Waveform (µs) | Current (A) | Repetitions | Recommended Fuse |
|----------------|-------------|---------------|-------------|----------------|------------------|
| Metallic A | 800 | 10×560 | 100 | 1 ea. polarity | 1.25 |
| Longitudinal A | 1500 | 10×160 | 200 | 1 ea. polarity | 1.25 |
| Metallic B | 1000 | 9×720 | 25 | 1 ea. polarity | 1.25 |
| Longitudinal B | 1500 | 9×720 | 37.5 | 1 ea. polarity | 1.25 |

For the type A events the 0.5 fuse will open, providing non-operational compliance. The 1.25 & 2.0 will not open, providing for operational compliance with TIA-968-A type A surge events.

UL 60950 requirements

UL60950 (EN 60950) (formerly UL 1950) Power Cross (L = longitudinal, M = metallic)

| Test Number | Voltage (V) | Current (A) | Time | Fuse Choices |
|----------------|-------------|-------------|-----------|-----------------|
| L1 | 600 | 40 | 1.5 secs. | 0.5, 1.25, 2.0 |
| L2 | 600 | 7 | 5 secs. | 0.5, 1.25, 2.0 |
| L3 | 600 | 2.2 | 30 min. | 0.5, 1.25, 2.0 |
| L4 | 200 | 2.2 | 30 min. | 0.5, 1.25, 2.0 |
| L5 | 120 | 25 | 30 min. | 0.5, 1.25, 2.0 |
| M1 | 600 | 40 | 1.5 secs. | 0.5, 1.25, 2.0 |
| M2 | 600 | 7 | 5 secs. | 0.5, 1.25, 2.0 |
| M3 | 600 | 2.2 | 30 min. | 0.5, 1.25, 2.0 |
| M4 | 600 | 2.2 | 30 min. | 0.5, 1.25, 2.0 |

Selection of test number depends on current limiting F fire enclosure/spacing of end product

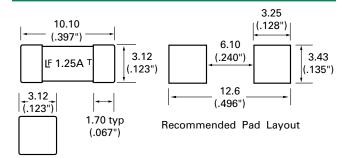

• 26 AWG line cord removes L1/M1 test requirement

• L5 conducted only if product does not pass section 6.1.2

• L2,M2,L3,M3,L4,M4 conducted if not in a fire enclosure

Fuse must open before the wiring simulator fuse (MDL 2.0).

Dimensions

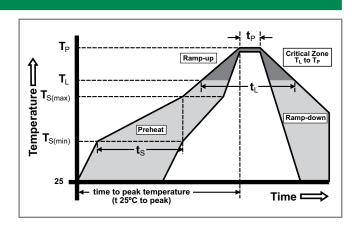

UL60950 (EN 60950) (formerly UL 1950) Impulse Test and Steady-State Electric Strength Test

| Test | Voltage (V) | Current (A) | Waveform | Repetitions | Fuse Choices |

Description

The RoHS compliant 154 Series OMNI-BLOK® Fuse and Holder Assembly offers a solution for efficient installation and easy replacement of miniature Nano^{2®} surface mount fuses. Offered in a tape and reel package, this fuse and holder combination can be installed on a PC board as an efficient single step. Fuse replacement can be accomplished without exposing the PC board to the detrimental effects of solder heat.

The fuse holder unit may be sold as a stand-alone item, shipped in bulk quantity (not pre-packaged in tape and reel cartridges) using part number 155900. Please contact Littelfuse for additional information.

Features

- Easy fuse replacement
- Miniature size
- RoHS compliant and Halogen Free
- Very Fast-Acting and Time-Lag options available
- Holder sized to fit a range of Nano^{2®} type fuses
- Low fuse temperature re-rating
- rating available - Fast-Acting Fuses: 62mA - 10A - Slo-Blo Fuses: 375mA -

ROHS HF C TUS US

- Wide operating ٠ temperature range
- Heat-resistant fuseholder, UL94 V-0
- 260°C reflow capable fuseholder
- Wide range of current

* The 453 and 454 Series fuses identified above have silver-plated end caps, designed to accommodate solder reflow processes:

For 453 Series fuse replacement, either 451, 453 or 448 Series may be used.

For 454 Series fuse replacement, either 452, 454 or 449 Series may be used.

For detailed operating characteristic and performance information for each of the fuse series mentioned above, please refer to their respective data available online at www.littelfuse.com.

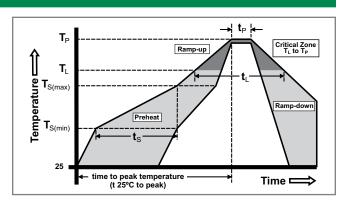

** 155900 is UR recognized and rated 125V, 10A.

Description

The 157 Series - Standard Nano Fuse/Clip assembly is a small, square, very fast-acting surface mount fuse that is assembled in surface mountable fuse clips. The fuse clip and pre-installed fuse combination can be automatically placed in PC Board in one efficient manufacturing operation. It permits quick and easy replacement of fuses without performing desoldering process, even in the field and without exposing the PC Board to detrimental effects of rework solder heat.

Features

- Surface Mountable, Very Fast-Acting Fuse.
- Fully compatible with RoHS/Pb-Free solder alloys and higher temperature profiles associated with leadfree assembly.
- Easily replaceable on PC Board (Field Replaceable)

ROHS HF CALUS CPS

- RoHS compliant and Halogen Free
- Available in ratings of 0.062 ~ 10 Amperes.

Applications

- Instrumentation
- Telecommunications
- Base Stations

Dimensions

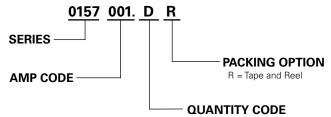

PCB Recommendation for Thermal Management

1. Minimum Copper Layer Thickness = 100um

2. Minimum Copper Trace Width = 10mm Note:

Alternate methods of thermal management may be used. In such cases, under normal operations, the maximum temperature of the fuse body should not exceed 80°C in a 25°C ambient environment.

Description

The 157T Series Fuse/Clip assembly is a small, square, Time-Lag, surface mount fuse that is assembled in surface mountable fuse clips. The unique time delay feature of this fuse design helps solve the problem of nuisance "opening" by accommodating inrush currents that normally cause a fast-acting fuse to open.

The fuse clip and pre-installed fuse combination can be automatically placed in PC Board in one efficient manufacturing operation. It permits guick and easy replacement of fuses without performing desoldering process, even in the field and without exposing the PC Board to detrimental effects of rework solder heat.

Features

- Surface Mountable, Time-Lag Fuse.
- Fully compatible with RoHS/Pb-Free solder alloys and higher temperature profiles associated with leadfree assembly.
- Easily replaceable on PC Board (Field Replaceable)
- RoHS Compliant and Halogen-free
- Available in ratings of 0.375 ~ 5 Amperes.

• Telecommunications

Applications

- Instrumentations
- Base Stations

Description

The 159 Series product is a metal fuse clip with preinstalled Littelfuse 461 Series TeleLink® fuse. This fuse and clip combination can be automatically installed in PC Boards in one efficient manufacturing operation. It permits quick and easy fuse replacement without exposing the PC Board and other components to risks of rework solder heat as required with direct surface mount fuses.

It meets UL 60950 power cross requirements and is designed to allow compliance with Telcordia GR-1089-CORE and TIA-968-A Surge Specifications. The product provides coordinated protection with Littlefuse SIDACtor® protection thyristors without series resistors.

Features

- Offer low profile easily-replaceable fuse alternative compatible with automated PCB surface mount equipment
- Come supplied with surge resistant Littelfuse 461 series TeleLink[®] Slo-Blo[®] fuse
- Fuse designed to allow compliance with Telcordia GR-1089-CORE and TIA-968-A (formerly FCC Part 68) Surge Specifications
- Provide coordinated protection with Littelfuse SIDACtor[®] protection thyristor devices and GDTs, without series resistors
- RoHS compliant and Halogen Free
- Clip fully compatible with RoHS/lead-free solder alloys and higher temperature profiles associated with lead-free assembly
- Available in ratings of 0.5-2.0 Amperes

Applications

- Telecom equipment (POTS) applications such as modems, answering machines, telephones, fax machines, and security systems
- Network equipment, such as:
 - SLIC interface portion of Fiber to the Curb (FTTC) and Fiber to the Premises (FTTP)
 - Non-Fiber SLIC interface for Central Office (CO) locations and Remote Terminals (RT)
 - xDSL applications such as ADSL, ADSL2+, VDSL, and VDSL2+
 - Ethernet 10/100/1000BaseT
 - ISDN "U" interface
 - Baystation T1/E1/J1, T3 (DS3) trunk cards

ROHS HF CRUs

Surface Mount Fuses

159 Fuse and Clip Series

Electrical Specifications by Item

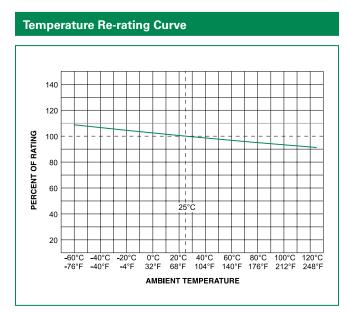

| Ampere Rating (A) | Amp Code | Max Voltage Rating (V) | Interrupting Rating | Nominal Cold Resistance (Ohms) | Nominal Melting I²t (A²sec) | Agency Approvals |
|-------------------------|----------|------------------------------|------------------------|--------------------------------------|--------------------------------|------------------|
| 0.50 | .500 | 600 | | 0.560 | 0.840 ¹ | Х |
| 1.25 | 1.25 | 600 | 60 A @600 VAC | .1040 | 16.5 ¹ | Х |
| 2.00 | 002. | 600 | | .0450 | 17.5 ¹ | Х |

1 l²t is calculated at 10 msecs. or less. l²t at 10 times rated current has a typical value of: 24 A²sec (2.0A), 22 A²sec (1.25A), 1.3 A²sec (0.5A).

• Typical inductance < 40nH up to 500 MHz.

• Resistance changes 0.5% for every °C.

Resistance is measured at 10% rated current.

Note:

1. Re-rating depicted in this curve is in addition to the standard re-rating of 25% for continuous operation.

| Maximum Temperature Rise | | |
|---------------------------------|---------------|--|
| Telecom Nano ^{2®} Fuse | Temperature | |
| 04611.25 | ≤82°C (180°F) | |
| 0461002 | ≤50°C (122°F) | |

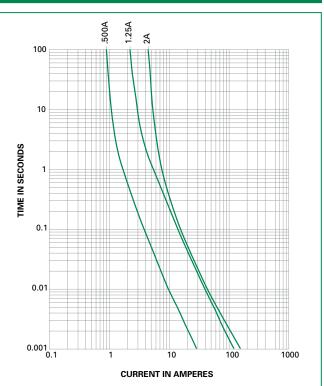

TIA-968-A (formerly FCC part 68) Surge Waveforms

(fuse can not open during type B events)

| Surge | Voltage (V) | Waveform (µs) | Current (A) | Repititions | Recommended Fuse |
|----------------|-------------|---------------|-------------|----------------|------------------|
| Metallic A | 800 | 10×560 | 100 | 1 ea. polarity | 1.25 |
| Longitudinal A | 1500 | 10×160 | 200 | 1 ea. polarity | 1.25 |
| Metallic B | 1000 | 9×720 | 25 | 1 ea. polarity | 1.25 |
| Longitudinal B | 1500 | 9×720 | 37.5 | 1 ea. polarity | 1.25 |

For the type A events the 0.5 fuse will open, providing non-operational compliance. The 1.25 & 2.0 will not open, providing for operational compliance with TIA-968-A type A surge events.

GR 1089 Inter-building requirements

GR 1089 1st level lighting surge inter-building

(Equipment under test can not be damaged and must continue to operate properly)

| Surge | Poak | Minimum Peak Current (A) | Max. Rise/Min. Decay (µs) | Repetitions Each Polarity | Fuse Choices |
|-------|------|-----------------------------------|------------------------------------|---------------------------------|-----------------|
| 1 | 600 | 100 | 10/1000 | 25 | 1.25, 2.0 |
| 2 | 1000 | 100 | 10/360 | 25 | 1.25, 2.0 |
| 3 | 1000 | 100 | 10/1000 | 25 | 1.25, 2.0 |

| 7 | 440 | 2.2 | 5 | 2 secs. | removed | 1.25, 2.0 |
| 8 | 600 | 3 | 1 | 1.1 secs. | removed | 1.25, 2.0 |
| 9 | 1000 | 5 | 1 | 0.4 sec. | in place | 1.25, 2.0 |

GR 1089 2nd level lightning surge telecom port (Equipment under test shall not become a fire,

fragmentation, or electrical safety hazard)

| Surge | | Minimum Peak Current (A) | Max. Rise/Min. Decay (µs) | Repe- titions Each Polarity | Fuse Choices |
|------------------|------|--------------------------------|------------------------------------|--------------------------------------|-----------------|
| 1 | 5000 | 500 | 2/10 | 1 | 0.5, 1.25, 2.0 |
| Alter- native | 5000 | 500/8=625 | 8/10 | 1 | 0.5, 1.25, 2.0 |

The 0.5 fuse will open during these test conditions. The 1.25 & 2.0 will not open thus providing operational compliance.

GR 1089 AC power fault 2nd level (fuse can open but must open in a safe and controlled manner)

| Test Circuite | Vrms | Short (A) | Duration | Fuse |
|------------------|---------|--------------|----------|----------------|
| 1 | 120,277 | 25 | 15 min. | 0.5, 1.25, 2.0 |
| 2 | 600 | 60 | 5 secs. | 0.5, 1.25, 2.0 |
| 3 | 600 | 7 | 5 secs. | 0.5, 1.25, 2.0 |
| 4 | 100-600 | 2.2 | 15 min | 0.5, 1.25, 2.0 |
| 5 | Diagram | Diagram | 15 min. | 0.5, 1.25, 2.0 |

Fuse must open before wiring simulator fuse (MDL 2.0).

UL60950 Requirements

UL 60950 (EN 60950, formerly UL 1950) Power Cross Test (L=Longitudinal, M=Metallic)

| Test Number | Voltage (V) | Current (A) | Time | Fuse Choices |
|----------------|-------------|-------------|-----------|-----------------|
| L1 | 600 | 40 | 1.5 secs. | 0.5, 1.25, 2.0 |
| L2 | 600 | 7 | 5 secs. | 0.5, 1.25, 2.0 |
| L3 | 600 | 2.2 | 30 min. | 0.5, 1.25, 2.0 |
| L4 | 200 | 2.2 | 30 min. | 0.5, 1.25, 2.0 |
| L5 | 120 | 25 | 30 min. | 0.5, 1.25, 2.0 |
| M1 | 600 | 40 | 1.5 secs. | 0.5, 1.25, 2.0 |
| M2 | 600 | 7 | 5 secs. | 0.5, 1.25, 2.0 |
| M3 | 600 | 2.2 | 30 min. | 0.5, 1.25, 2.0 |
| M4 | 600 | 2.2 | 30 min. | 0.5, 1.25, 2.0 |

Selection of test number depends on current limiting F fire enclosure/spacing of end product

• 26 AWG line cord removes L1/M1 test requirement

• L5 conducted only if product does not pass section 6.1.2

• L2,M2,L3,M3,L4,M4 conducted if not in a fire enclosure

Fuse must open before the wiring simulator fuse (MDL 2.0).

UL 60950 (EN 60950, formerly UL 1950) Impulse Test and Steady-State Electric Strength Test

Additional Information

Description

The 160 Series product is a metal fuse clip with preinstalled Littelfuse 443 Series Fuse. This fuse and clip combination can be automatically installed in PC Boards in one efficient manufacturing operation. It permits quick and easy fuse replacement without exposing the PC Boards and other components to risks of rework solder heat as required with direct surface mount fuses.

It is designed to enable compliance with the RoHS directive. This product is fully compatible with lead-free solder alloy and higher temperature profiles associated with lead-free assembly.

Features

- Offer low profile easily-replaceable fuse alternative compatible with automated PCB surface mount equipment
- Comes supplied with Littelfuse 443 Series 250V Nano^{2®} Fuse
- RoHS compliant and Halogen Free

Applications

- AC/DC power adaptor
- Telecom equipment system power
- Portable system built-in AC/DC converter

 Clip fully compatible with RoHS/lead-free solder alloys and higher temperature profiles associated with lead-free assembly

ROHS HE CALUS C

• 0.5A - 5A ampere rating available

High voltage DC/DC converter

Electrical Specifications by Item

Description

The 459 Series Very Fast-Acting SMF Fuse is based on Littelfuse PICO[®] fuse technology, though offered in a surface mount package.

This series of devices meets the requirements of the RoHS directive.

Features

- Very Fast-Acting
- Wide current rating range: 62mA to 5A
- Wide operating temperature range
- Low temperature re-rating
- RoHS compliant

Applications

- Wireless basestation
- Network equipment
- Telecom equipment

Agency Approvals

AGENCY

91

SP.

Description

Fast-Acting and Slo-Blo® Fuse versions of the Flat-Pak® Fuse designs are available. Both designs are available in either a gull-wing surface mount package or a DIP configuration for through-hole mounting. These fuse designs feature a 250 VAC rating in a low profile, rectangular package.

Electrical Specifications by Item

Description

The 446/447 series are circuit-board mountable, flat profile, fast-acting fuses designed for protection of electronic ballasts and power inverter applications. The 446 series is designed with leads for surface mount applications, and the 447 series is designed with leads for through-hole applications.

This series of devices are 100% lead-free and meets the requirements of the RoHS directive.

Features

- RoHS compliant and 100% lead-free
- Ideal for use in electronic lighting ballast, power supply and power inverter applications.
- Rated for use in 125,

250, 277 and 350 VAC circuits.

RoHS PO

 Based on the proven reliability of the automotive MINI[®] Fuse; available from 2 through 10 amperes.

Temperature Re-rating Curve

Note

1. Re-rating depicted in this curve is in addition to the standard re-rating of 25% for continuous operation.

Soldering Parameters

446 Series:

Reflow Solder - 235°C, 5 seconds maximum. No-clean process recommended. Wave Solder - Not recommended. Non-plated terminal surfaces may not meet MIL-STD-202, Method 208.

447 Series:

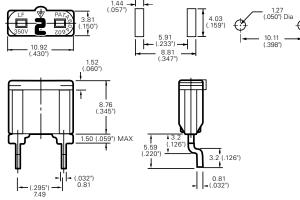

Contact Littelfuse for soldering parameters. Inside terminal face of each lead is non-plated zinc. Non-plated zinc terminal faces may not meet MIL-STD-202, method 208. To ensure that the fuse is acceptable for the application, appropriate application testing should be performed.

Description

The 262/268/269 Series are high–reliability MICRO[™] fuses, with a 125V rating, very fast-acting type with high breaking capacity. The 269 series is listed under the Department of Defense Quality Product List.

Features

- Military grade available
- Available in plug-in and radial leaded
- Available from very low ampere of 0.002A to 5A

radiai leaded

Applications

Protection of electrical, electronic, and communication equipment having printed circuit boards (PCBs) usable in direct current (DC) and alternating current (AC) (up to 400 hertz (Hz)) circuits capable of withstanding and functioning in extreme conditions found in Spacecraft or Military applications as described in MIL-PRF-23419.

Soldering Parameters - Wave Soldering

Recommended Process Parameters:

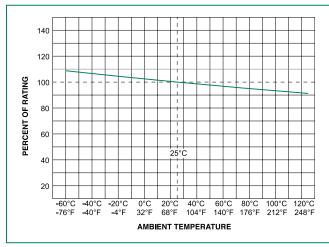

| Wave Parameter | Lead-Free Recommendation |
|--|-----------------------------------|
| Preheat: (Depends on Flux Activation Temperature) | (Typical Industry Recommendation) |
| Temperature Minimum: | 100° C |
| Temperature Maximum: | 150° C |
| Preheat Time: | 60-180 seconds |
| Solder Pot Temperature: | 260° C Maximum |
| Solder Dwell Time: | 2-5 seconds |

Recommended Hand-Solder Parameters:

Solder Iron Temperature: 350° C +/- 5°C Heating Time: 5 seconds max.

Note: These devices are not recommended for IR or Convection Reflow process.

Temperature Re-rating Curve

Notes:

1. Rerating depicted in this curve is in addition to the standard derating of 25% for continuous operation.

2. Please contact Littelfuse for average time current curve.

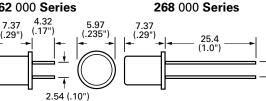

Product Characteristics

| Materials | Gold-Plated Copper Leads, Type II (Fuse cap is also Gold-Plated) |
|--|---|
| Weight | 262 and 269 Series .36 Grams; 268 Series .48 Grams |
| Lead Pull Force | MIL-STD-202, Method 211, Test Condition A (will withstand a 5 lb. axial pull test) |
| AQL (Electrical Characteristics) | Certified to 1% AQL |
| Sampling | Per MIL-STD-105, Inspection Level II |
| Traceability and Identification Records | Controlled by lot number and retained on file for a minimum of three years. Copies of Lot Certification Test data available when requested with order |
| Options | Special screening tests, burn-in, etc. can be supplied on special order to meet specific requirements |
| Product Marking | 262 / 268 Series: Brand logo, current and voltage ratings 269 Series: Brand logo, current and voltage ratings and agency approval mark |

| Operating Temperature | –55°C to +125°C |
|--|---|
| Shock | (1/500): MIL-STD-202, Method 213, Test Condition A (50 G's peak for 11 milliseconds). (1/200–5): MIL- STD-202, Method 213, Test Condition I (100 G's peak for 6 milliseconds) |
| Vibration | MIL-STD-202, Method 201 (10–55 Hz); MIL-STD-202, Method 204, Test Condition C (55–2000 Hz at 10 G's Peak) |
| Salt Spray | MIL-STD-202, Method 101, Test Condition B |
| Seal Test | MIL-STD-202, Method 112, Test Condition A |
| Insulation Resistance (After Opening) | MIL-STD-202, Method 302, Test Condition A (1/2 Megohm minimum) |
| Thermal Shock | MIL-STD-202, Method 107, Test Condition B (–65°C to 125°C) |
| Moisture Resistance | MILSTD-202, Method 106 |
| Fuses to MIL SPEC | 262 Series is available as FM07A on QPL for MIL-PRF-23419/7. To order, change 262 to 269 |

Electrical Characteristics

Description

The 303 Series are TR3, fast-acting type, 125V rated fuses designed in accordance to UL 248–14.

Features

- Reduced PCB space requirements
- Direct solderable or plug-in versions
- Internationally approved
- Low internal resistance
- Shock safe casing
- Applications
- Battery chargers
- Consumer electronics
- Power supplies

• Vibration resistant

• RoHS compliant, Lead-

• Available from 0.050A

to 5A

Free and Halogen-Free

• Industrial controllers

Description

The 372 Series are TR5[®] Fuses, Time-Lag type, 250V rated fuses, that are designed in accordance to IEC 60127-3.

Features

- Halogen free, Lead-free and RoHS compliant
- Reduced PCB space requirements
- Direct solderable or plug-in versions
- Internationally approved
- Low internal resistance
- Shock safe casing
- Vibration resistant
- Available from 0.040A to 6.3A

Applications

- Battery Chargers
- Consumer electronics
- Power supplies
- Industrial Controllers

1 Per UL, approved breaking capacity is 50 A at 250 V.

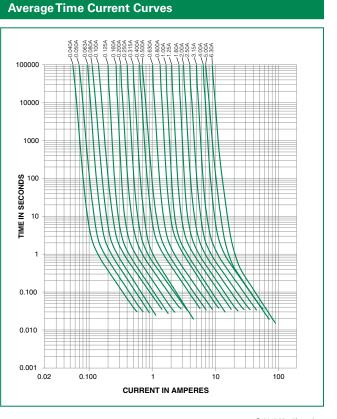

* Conducting path min. 0.2 mm²

Notes:

1) 1.00 means the number one with two decimal places. 1,000 means the number one thousand.
 2) Resistance is measured at 10% of rated current, 25°C.

Description

The 382 Series are TE5 Time-Lag type Fuses, 250V rated, with enhanced breaking capacity and designed in accordance to IEC 60127-3.

Features

- Halogen free, Lead-free and RoHS compliant
- Reduced PCB space requirements
- Direct solderable or • plug-in versions
- 100A breaking capacity
- Internationally approved

Applications

- Battery Chargers
- Power supplies
- Consumer Electronics
- Industrial Controllers

Low internal resistance

• Available from 1A to 10A

Shock safe casing

• Vibration resistant

Average Time Current Curves

Soldering Parameters - Wave Soldering

Recommended Process Parameters:

| Wave Parameter | Lead-Free Recommendation |
|--|-----------------------------------|
| Preheat: (Depends on Flux Activation Temperature) | (Typical Industry Recommendation) |
| Temperature Minimum: | 100°C |
| Temperature Maximum: | 150°C |
| Preheat Time: | 60-180 seconds |
| Solder Pot Temperature: | 260°C Maximum |
| Solder Dwell Time: | 2-5 seconds |

Recommended Hand-Solder Parameters:

Solder Iron Temperature: 350°C +/- 5°C Heating Time: 5 seconds max.

Note: These devices are not recommended for IR or Convection Reflow process.

Product Characteristics

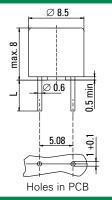

| Materials | Base/Cap: Brown Thermoplastic Polyamide PA 6.6, UL 94 V-0 Round Pins: Copper, Tin-plated |

Description

The 383 series are TR5® time-lag 300V rated fuses and designed in accordance to IEC60127-3.

Features

- Halogen free, Lead-free and RoHS compliant
- Reduced PCB space requirements
- Direct solderable or plug-in versions
- Applications
- Electronic Ballast

Samples

Description

The 395 Series TE5[®] Fuses are fast-acting type, 125V and are designed in accordance to UL 248-14.

Features

- RoHS compliant and Lead-free
- Reduced PCB space requirements
- Direct solderable or plug-in versions
- Internationally approved
- Low internal resistance
- Shock safe casing
- Vibration resistant
- Halogen Free
- Available from 0.05A to 6.3A

Applications

- Battery chargers
- Consumer Electronics
- Power supplies
- Industrial controllers

Description

The 397 Series TE5 Fuses are SLO BLO® type, 125V rated and designed in accordance to UL248-14.

Features

- Surge Proof for telecom applications
- Reduced PCB space requirements
- Direct solderable or plug-in versions
- · Shock safe casing
- Vibration resistant
- Lead-free, Halogen free and RoHS compliant
- Available from 0.35A to 1.5A

Applications

- Battery chargers
- Consumer Electronics
- Telecom Applications
- Power supplies
- Industrial controllers

Description

The 400 Series TE5[®] Fuse is a Time-Lag type subminiature fuse and designed for overcurrent protection. It is 250V rated and designed in accordance to IEC 60127-3.

Features

- Halogen free, Lead-free and RoHS compliant
- Reduced PCB space requirements
- Direct solderable or plugin versions
- Shock safe casing

RoHS 🔞 HF 🕻 🞯 🔬 🐑 🕅 us

- Vibration resistant
- High Breaking Capacity up to 130A at 250VAC
- Internationally approved
- Low internal resistance

Applications

- Battery chargers
- Consumer electronics
- Power supplies
- Industrial controllers

Additional Information

Description

The 804 Series is a TE Universal Modular Fuse (UMF), TT time-lag type subminiature fuse designed for overcurrent protection. It is 250V rated and designed in accordance to IEC 60127-4.

Features

- Lead-free, Halogen-free and RoHS compliant.
- Reduced PCB space
 requirements
- Direct solderable or plug-in versions
- Low internal resistanceShock safe casing
- Vibration resistant
- Excellent surge tolerance due to high i²t values

Applications

- Battery Charger
- Consumer Electronics
- Power Supplies
- Industrial Controllers

Electrical Characteristics

Description

The 450V TE5® Fast-acting Fuse is designed to enable compliance with the RoHS Directive. This product is fully compatible with lead-free solder alloy. This device is UL Recognized for protecting components or internal circuits against overcurrent conditions at high DC voltages.

Features

- Reduced PCB space requirements
- Direct solderable or plug-in versions
- Low internal resistance
- Halogen free, Lead-free, and RoHS compliant
- Shock safe casing

- Vibration resistant
- Antimony-free
- Ideal for high voltage DC applications

ROHS 🗭 HF c 🔊 us 🗫

- Very high breaking capacity of 10kA at rated DC voltage

Applications

- DC/DC Converter
- Transformer-less AC/DC Circuit
- Data Centers
- Telecom/Datacom Central Offices

Notes:

1. This fuse is not recommended for use in DC circuits where the available prospective short-circuit current is less than 300A at rated voltage.

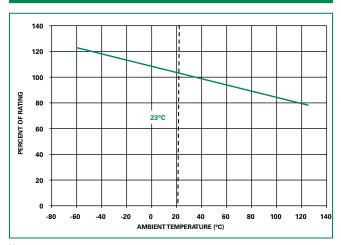

2. Cold resistance measured at less than 10% of rated current at 23°C.

3. An operating current of 80% or less of rated current is recommended, with further derating required at elevated ambient temperature.

4. Have special electrical characteristic needs? Contact Littelfuse to learn more about application specific options.

Description

The PICO[®] II Very Fast-Acting Fuse is designed to meet an extensive array of performance characteristics in a space-saving subminiature package.

Features

- Very fast-acting
- Small size
- Wide current rating range (0.062A- 15A)
- Halogen-free available
- Wide operating temperature range

HF **91** @ �≥≙QPL@

• Low temperature re-rating

Applications

Secondary protection for space constrained applications

- Flat–panel display TV
- LCD monitor
- LCD backlight inverter
- Office machines
- Power supply
- Audio/Video system
- Lighting system
- Medical equipment

| Shock | MIL-STD-202, Method 213, Test Condition I (100 G's peak for 6 msecs.) |
| Insulation Resistance (After Opening): | MIL-STD-202, Method 302, Test Condition A (10,000 ohms minimum at 100 volts) |
| Moisture Resistance | MIL-STD-202, Method 106 |
| Resistance to Soldering Heat | Withstands 60 seconds above 200°C and up to 260°C, maximum |
| Flammability Rating | UL 94V–0 |

Part Numbering System

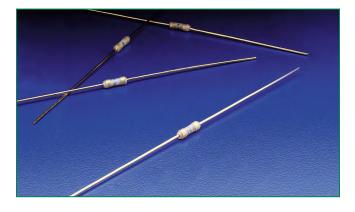

Packaging

| Packaging Option | Packaging Specification | Quantity & Packaging Code | | |
|---------------------------------------|----------------------------|--|--|--|
| *T1: 52.4mm (2.062") Tape and Reel | EIA 296 | Please refer to available quantities | | |
| **T3: 73mm (2.874') Tape and Reel | EIA 296 | above in "Part Numbering System" | | |

The default lead length for both ammo pack and loose pack is T1 for 251 and is T3 for 253.

* T1 dimension is defined as the length of the component between the two Notes: tapes. The full component length is 62.7mm (2.468"). **T1 length is for 251 series only**. ** T3 dimension is defined as the length of the component between the two tapes. The full component length is 83.3.7mm (3.28"). T3 length is for 253 series only.

Note: Rerating depicted in this curve is in addition to the standard derating of 25% for continuous operation.

Soldering Parameters

Recommended Process Parameters:

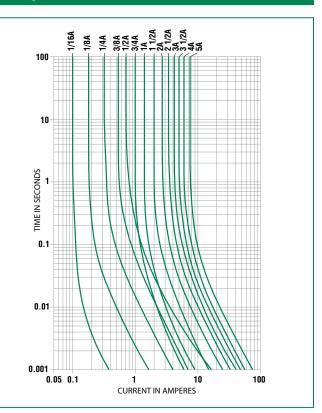

| Wave Parameter | Lead-Free Recommendation |
|--|-----------------------------------|
| Preheat: (Depends on Flux Activation Temperature) | (Typical Industry Recommendation) |
| Temperature Minimum: | 100° C |
| Temperature Maximum: | 150° C |
| Preheat Time: | 60-180 seconds |
| Solder PotTemperature: | 260° C Maximum |
| Solder Dwell Time: | 2-5 seconds |

Recommended Hand-Solder Parameters:

Solder Iron Temperature: 350° C +/- 5°C Heating Time: 5 seconds max.

Note: These devices are not recommended for IR or **Convection Reflow process.**

Samples

Description

The 471 Series PICO[®] II Time-Lag Fuse is designed for applications that require moderate in–rush withstand and is in a space-saving subminiature package.

Features

- Moderate in–rush withstand
- Small size
- Wide range of current ratings available (0.500A to 5A)
- RoHS compliant
- Halogen-free available

ROHS HF W & PS

- Wide operating temperature range
- Low temperature de-rating

| (Sft) | 29862 | 0.062 - 10A | 265/266 |
| QPL | FM08A | 0.062 - 10A | 267 |

Description

The 265/266/267 Series are high–reliability PICO® Fuses, that are very fast-acting, with an insulating sleeve. **These fuses provide supplemental protection in end-use equipment to provide protection for components or internal circuits. They are not suitable for branch or feeder circuit use.** The Military version of the 265 Series (except 1/16 ampere rating) is available in FM08A on QPL for MIL-PRF-23419/8. To order, change 265 to 267.

Features

•

- Military grade available
- RoHS compliant
- Available in axial and radial leaded
- Available from 0.062A to 15A
- Available in miniature and subminiature formats

874 Series Fuse, Lead-free 3.6×10 mm, Fast-Acting Fuse

Description

Single Pigtail Axial Lead 3.6 ×10mm Fast-Acting Fuse

Features

- Designed to UL/CSA 248 Standard
- Fast-Acting, Ceramic body fuse in a compact package
- Single Pigtail Axial Lead format

RoHS 🗭 🕕

- Pb-free, RoHS Compliant
- Available in ratings of 0.10 to 10 Amperes

Applications

This space saving fuse is ideally suited for lighting, power supply, and adapter applications.

Datasheet

For recommended fuse accessories for this product series, see 'Recommended Accessories' section.

Description

Littelfuse 208 Series (2AG) 350V Fast-Acting Fuses are available in cartridge form or with axial leads. This series provides the same performance characteristics as its 3AG counterpart, while occupying one-third the space. Sleeved fuses are available.

Features

• In accordance with Underwriter's Laboratories Standard UL 248-14

various lead forming dimensions

ROHS 🕫 c 🔁 US 😤 (E

- RoHS compliant and Lead-free
- Available in cartridge and axial lead form and with

Applications

· Electrical ballasts used in fluorescent lighting and other applications

Accessories

Description

The 2AG Slo-Blo[®] Axial Leaded Fuses provide the same performance characteristics as their 3AG counterpart while occupying one-third the space.

Features

- In accordance with Underwriter's Laboratories Standard UL 248-14
- Fuses are boardwashable in most solvents with thermoplastic sleeve
- Available in axial lead form and with various lead forming dimensions

RoHS 🕫 c 🔁 us 🚯 🤇 🤆

• RoHS compliant and lead–free

Applications

Used as supplimentary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

Description

Littelfuse 229/230 series Slo-Blo® Fuses are available in 2AG size cartridge or axial lead form, offer tripped fuse indicating option, and offer features designed to meet rigorous Telecom industry requirements.

229/230 series product ordered with the tripped fuse indicating option show discoloration of the glass body immediately after trip. They offer the same performance characteristics as standard product, and help to reduce time locating the tripped fuse and troubleshooting circuit issues.

The 229/230 series 0.25A - 1.25A range combines conventional overcurrent protection with ability to withstand high current, short duration pulses which complies to short circuit requirements of UL 60950 for telephone equipment. Insulating sleeve option is also available. Please refer to the Surge Withstand Specifications section of this document for additional information.

Features

- Available in cartridge and axial lead form, and a wide range of lead forming dimension and packaging options
- In accordance with UL ٠ Standard 248-14
- RoHS compliant and Lead-free
- Tripped fuse indicating option (add suffix 'S' to part number)

Additional Information

Resources

 $\mathbf{\Psi}$

Samples

229 Series

For recommended fuse accessories for this product series, see 'Recommended Accessories' section.

• Fuses are available for board washable with the additional sealing process (add suffix 'A' to part number)

 Sleeved fuse option available (contact Littelfuse for additional information)

Electrical Characteristic Specifications by Item

Description

5×20mm Medium–Acting, Time-lag, Glass Body Cartridge Fuse.

Features

- Visual fault indication
- Direct solderable or plug-in versions
- Worldwide availability
- RoHS compliant and Lead-free

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

Electrical Characteristics for Series

Description

 $5{\times}20\text{mm}$ fast-acting glass body cartridge fuse designed to IEC specification.

RoHS Ø 🖓 🖄 🖾 🌠 🔍 📢 🕲 (€ 🐑

Features

- Designed to International (IEC) Standards for use globally
- Meets the IEC 60127-2, Sheet 2 specification for fast-acting fuses
- Available in cartridge and axial lead form
- RoHS compliant and lead-free

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

Description

 $5{\times}20\text{mm}$ Time-Lag glass body cartridge fuse designed to IEC specification.

Features

- Designed to International IEC Standards for use globally
- Meets the IEC 60127-2, Sheet 3 specification for Time-Lag fuses
- Available in cartridge and axial lead form
- RoHS compliant and lead-free

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

Additional Information

For recommended fuse accessories for this product series, see '<u>Recommended Accessories</u>' section.

Temperature Re-rating Curve

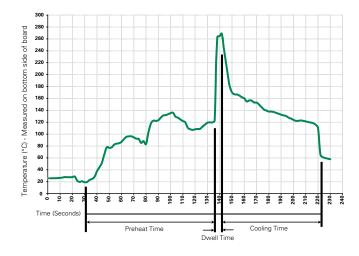

Note: Rerating depicted in this curve is in addition to the standard derating of 25% for continuous operation.

5×20 mm > Time-Lag > 218 Series

Soldering Parameters - Wave Soldering

Recommended Process Parameters:

| Wave Parameter | Lead-Free Recommendation |
|--|-----------------------------------|
| Preheat: | |
| (Depends on Flux Activation Temperature) | (Typical Industry Recommendation) |
| Temperature Minimum: | 100°C |
| Temperature Maximum: | 150°C |
| Preheat Time: | 60-180 seconds |
| Solder Pot Temperature: | 260°C Maximum |
| Solder Dwell Time: | 2-5 seconds |

Recommended Hand-Solder Parameters:

Solder Iron Temperature: 350°C +/- 5°C Heating Time: 5 seconds max.

Note: These devices are not recommended for IR or Convection Reflow process.

Electrical Characteristic Specifications by Item

Description

 $5{\times}20\text{mm}$ time-Lag surge withstand glass body cartridge fuse designed to IEC specification.

Features

- Designed to International (IEC) Standards for use globally
- Available in cartridge and axial lead form
- Meets the IEC 60127-2, Sheet 3 specification for time-Lag fuses
- RoHS compliant and lead-free.

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

Description

 $5{\times}20\text{mm}$ time-Lag glass body cartridge fuse designed to IEC specification.

RoHS 🔞 🛱 🕸 🕸 🖓 🖉 🕼 🕼 🕼

Features

- Designed to International IEC Standards for use globally
- Available in cartridge and axial lead form
- Meets the IEC 60127-2, Sheet 6 specification for time-Lag fuses
- RoHS compliant and lead-free

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

Description

5×20mm fast-acting ceramic body cartridge fuse designed to IEC specification.

Features

- Designed to International (IEC) Standards for use globally
- Available in cartridge and axial lead form
- RoHS compliant and lead-free
- Meets the IEC 60127-2, sheet 1 specification for fast-acting fuses

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

Description

 $5{\times}20\text{mm}$ fast-acting ceramic body cartridge fuse Designed to IEC specification

Features

- Designed to International (IEC) Standards for use globally
- Sheet 1 specification for Fast-Acting fuses

• Meets the IEC 60127-2,

- High breaking capacity
- RoHS compliant and lead-free

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

I2t test at 10x rated current

5×20 mm > Fast-Acting Fuse > 216SP Series

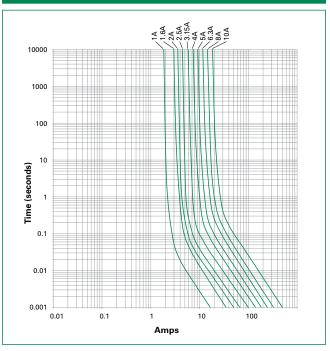

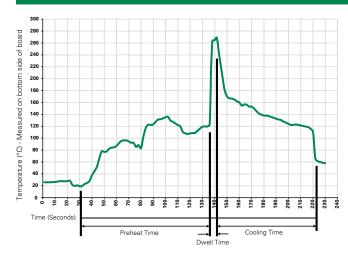

Note

Rerating depicted in this curve is in addition to the standard derating of 25% for continuous operation.

Soldering Parameters - Wave Soldering

Recommended Process Parameters:

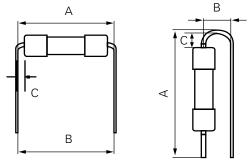

| Wave Parameter | Lead-Free Recommendation |
|--|-----------------------------------|
| Preheat: | |
| (Depends on Flux Activation Temperature) | (Typical Industry Recommendation) |
| Temperature Minimum: | 100°C |
| Temperature Maximum: | 150°C |
| Preheat Time: | 60-180 seconds |
| Solder Pot Temperature: | 260°C Maximum |
| Solder Dwell Time: | 2-5 seconds |
| | |

Recommended Hand-Solder Parameters:

Solder Iron Temperature: 350°C +/- 5°C Heating Time: 5 seconds max.

Note: These devices are not recommended for IR or Convection Reflow process.

Different values of A and B available, please contact the Littelfuse sales representative in your region:

For the pigtailed fuse, please follow the recommendations below for axial lead forming and mounting into PCB:

Lead forming:

The distance C between cap flat surface and axial lead shall be greater than 1.0 mm.

PCB mounting:

According to the standard of IPC-A-610, the distance between PCB and fuse cap is recommended to be a minimum of 1.5 mm.

Axial Lead & Cartridge Fuses 5×20 mm > Fast-Acting Fuse > 216SP Series

Temperature Re-rating Curve

Note:

Rerating depicted in this curve is in addition to the standard derating of 25% for continuous operation.

Average Time Current Curves

Soldering Parameters - Wave Soldering

Recommended Process Parameters:

| Wave Parameter | Lead-Free Recommendation |
|--|-----------------------------------|
| Preheat: (Depends on Flux Activation Temperature) | (Typical Industry Recommendation) |
| Temperature Minimum: | 100°C |
| Temperature Maximum: | 150°C |
| Preheat Time: | 60-180 seconds |
| Solder Pot Temperature: | 260°C Maximum |
| Solder Dwell Time: | 2-5 seconds |

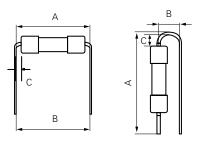

Recommended Hand-Solder Parameters:

Solder Iron Temperature: 350°C +/- 5°C

Heating Time: 5 seconds max.

Note: These devices are not recommended for IR or Convection Reflow process.

Different values of A and B available, please contact the Littelfuse sales representative in your region:

For the pigtailed fuse, please follow the recommendations below for axial lead forming and mounting into PCB:

Lead forming:

The distance C between cap flat surface and axial lead shall be greater than 1.0 mm.

PCB mounting:

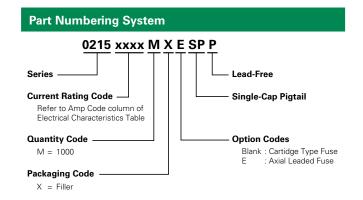

The distance between PCB and fuse cap is recommended to be a minimum of 1.5 mm.

Description

The 232 Series Fuse is a 5x20mm, medium-acting, glass body cartridge fuse. It is specifically designed to meet the requirements of Appendix 3 of METI/PSE.

Features

- Available in cartridge and axial lead format
- RoHS compliant and lead-free

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

Additional Information

Temperature Re-rating Curve

Rerating depicted in this curve is in addition to the standard derating of 25% for continuous operation.

Average Time Current Curves

Soldering Parameters - Wave Soldering

Recommended Process Parameters:

| Wave Parameter | Lead-Free Recommendation |
|--|-----------------------------------|
| Preheat: | |
| (Depends on Flux Activation Temperature) | (Typical Industry Recommendation) |
| Temperature Minimum: | 100°C |
| Temperature Maximum: | 150°C |
| Preheat Time: | 60-180 seconds |
| Solder Pot Temperature: | 260°C Maximum |
| Solder Dwell Time: | 2-5 seconds |

Recommended Hand-Solder Parameters:

Solder Iron Temperature: 350°C +/- 5°C Heating Time: 5 seconds max.

Note: These devices are not recommended for IR or **Convection Reflow process.**

Description

 $5{\times}20\text{mm}$ medium-acting glass/ceramic body cartridge fuse designed to UL specification.

Features

- Designed to UL/CSA/ ANCE 248-1 and 248-14 Standards
- Glass body for 1-3.5A, Ceramic body for 4-10A

RoHS 🔊 (E 🖳 🏵 🐑 🕼

- Available in cartridge and lead axial lead format
- RoHS compliant and lead-free

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

For recommended fuse accessories for this product series, see '<u>Recommended Accessories</u>' section.

Additional Information Datasheet Resources Samples

For recommended fuse accessories for this product series, see '<u>Recommended Accessories</u>' section.

Description

 $5{\times}20\text{mm}$ fuse with gold or rhodium-plated caps and colourful ceramic body. Designed to IEC Cartridge Fuse standard.

Features

- Desiged to International (IEC) Standard for use globally. Meets the IEC 60127-2, Sheet 5 specification for timelag fuses
- Available in Cartridge form
- RoHS compliant and lead-free
- Low magnetic susceptibility

Applications

Ideal for supplementary protection in appliances or utilization equipment, especially in audio and medical equipment.

Samples

Description

400Vdc/500Vac rated, 5x20mm, time-lag, surge withstand ceramic body cartridge fuse.

Features

• Designed to International (IEC) Standard for use globally.

• Follow the IEC 60127-2,

time-lag fuses

- Available in cartridge and axial lead form
- RoHS compliant and lead-free Sheet 5 specification for

ROHS @ PS C N US SA CE

Applications

High energy and power efficient applications.

Soldering Parameters - Wave Soldering

Recommended Process Parameters:

| Wave Parameter | Lead-Free Recommendation |
|--|-----------------------------------|
| Preheat: (Depends on Flux Activation Temperature) | (Typical Industry Recommendation) |
| Temperature Minimum: | 100°C |
| Temperature Maximum: | 150°C |
| Preheat Time: | 60-180 seconds |
| Solder Pot Temperature: | 260°C Maximum |
| Solder Dwell Time: | 2-5 seconds |

Recommended Hand-Solder Parameters:

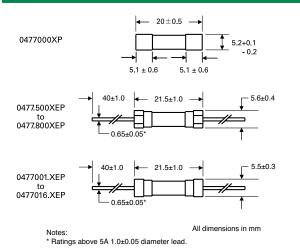

Solder Iron Temperature: 350°C +/- 5°C Heating Time: 5 seconds max.

Note: These devices are not recommended for IR or Convection Reflow process.

Product Characteristics

Datasheet

Description

450Vdc/500Vac rated, $5\times$ 20mm, Time-Lag, surge withstand, ceramic body, cartridge fuse.

Features

- Designed to International (IEC) Standards for use globally
- Follow the IEC 60127-2, Sheet 5 specification for Time-Lag Fuses
- Available in Cartridge and Axial lead Form

RoHS 10 CPS

 (\mathbb{Z})

 Rohs compliant and Pb-free

Applications

Inverter in LCD backlight unit, DC side of air-conditioners, 3-phase power supplies, Higher Energy and Power Efficient applications.

Description

The 3AG Fast-Acting Fuse solves a broad range of application requirements while offering reliable performance and cost-effective circuit protection.

Features

- In accordance with UL Standard 248-14
- RoHS compliant and Lead-free

RHS 🕫 🧏 c 🔁 us 🕸 🖲 🚱 🧲

 Available in cartridge and axial lead format and with various forming dimensions

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

NOTES:

** For 318 Series 12A to 30A, the agency approval is only cURus.

Temperature Re-rating Curve

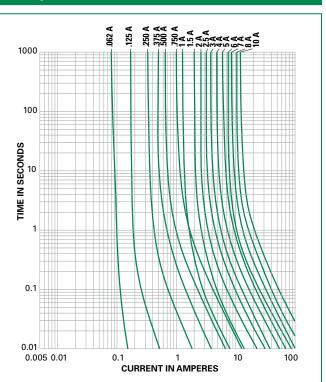

Note:

Rerating depicted in this curve is in addition to the industry practice derating of 25% for continuous operation.

Soldering Parameters - Wave Soldering

Average Time Current Curves

Please contact Littelfuse for more details on those T-C Curves of other ampere ratings which are not published.

300 280 Temperature (°C) - Measured on bottom side of board 260 240 220 200 180 160 140 120 100 80 60 40 20 0 ± 10-50-230-20. 40 60. 70-8 10 20-80-200-210-80. 6 30 50 8 170 190 Time (Seconds Preheat Time Cooling Time Dwell Time

Recommended Process Parameters:

| Wave Parameter | Lead-Free Recommendation |
|--|-----------------------------------|
| Preheat: | |
| (Depends on Flux Activation Temperature) | (Typical Industry Recommendation) |
| Temperature Minimum: | 100°C |
| Temperature Maximum: | 150°C |
| Preheat Time: | 60-180 seconds |
| Solder Pot Temperature: | 260°C Maximum |
| Solder Dwell Time: | 2-5 seconds |

Recommended Hand-Solder Parameters:

Solder Iron Temperature: 350°C +/- 5°C Heating Time: 5 seconds max.

Note: These devices are not recommended for IR or Convection Reflow process.

315 Series

315 Series

Description

The 3AG Slo-Blo® fuse solves a broad range of application requirements while offering reliable performance and costeffective circuit protection.

The fuse catalog number with the suffix "ID" instantly identifies itself upon opening by showing a discoloration of its glass body. Guesswork and time consuming circuit testing are eliminated. This unique design offers the same quality performance characteristics as the standard 3AG Slo-Blo® Fuse design.

Features

- In accordance with UL Standard 248-14
- RoHS compliant and Lead-free
- Available in cartridge and axial lead format and with various forming dimensions

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

Electrical Characteristics by Series

| % of Ampere Rating | Ampere Rating | OpeningTime |
|-----------------------|---------------|-------------------------------|
| 100% | 10mA – 30A | 4 hours, Minimum |
| 135% | 10mA – 30A | 1 hour, Maximum |
| 200% | 10mA – 15A | 5 sec., Min., 30 sec., Max |
| 200% | 20A – 30A | 5 sec., Min., 60 sec Max |

* For 313series, these ratings available with an indicating option. Add the "ID" designation to the series number. i.e. 313.500ID.
 ** These 2 ratings are designed for special voltage requirement. For 10A, it is available as 250Vac rated and the part number is 0313010.MX250P; For 15A, it is available as 125Vac rated and the part number is 0315015.MX125P.

3AG > Slo-Blo[®] Fuse > 313/315 Series

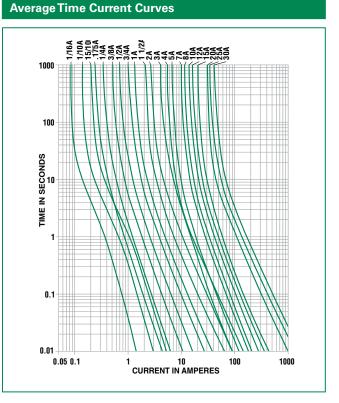

A - For 313/315 Series, from 10mA to 150mA

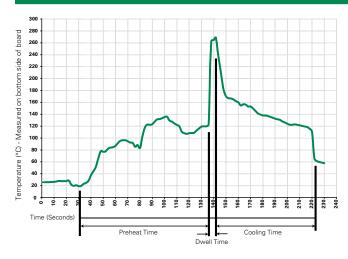

B - For all other ampere ratings of 313/315 series

Note:

Rerating depicted in this curve is in addition to the standard derating of 25% for continuous operation.

Soldering Parameters - Wave Soldering

Recommended Process Parameters:

| Wave Parameter | Lead-Free Recommendation |
|--|-----------------------------------|
| Preheat: | |
| (Depends on Flux Activation Temperature) | (Typical Industry Recommendation) |
| Temperature Minimum: | 100°C |
| Temperature Maximum: | 150°C |
| Preheat Time: | 60-180 seconds |
| Solder Pot Temperature: | 260°C Maximum |
| Solder Dwell Time: | 2-5 seconds |

Recommended Hand-Solder Parameters:

Solder Iron Temperature: 350°C +/- 5°C Heating Time: 5 seconds max.

Note: These devices are not recommended for IR or Convection Reflow process.

Electrical Specification by Item

Description

The 3AB Fast-Acting Fuse with ceramic body construction permits higher interrupting ratings and voltage ratings. Ideal for applications where high current loads are expected.

Features

- In accordance with UL Standard 248-14
- Available in cartridge and axial lead format and with various forming dimensions

Lead-free

• RoHS compliant and

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

Electrical Characteristic Specifications by Item

Description

The 3AB Very Fast-Acting Fuse for protection of Silicon Controlled Rectifiers and similar solid-state devices.

Features

- In accordance with UL Standard 248-14
- RoHS compliant and Lead-free
- Available in cartridge format only

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

Description

The 3AB Slo-Blo® Fuse with ceramic body construction permits higher interrupting ratings and voltage ratings. Ideal for applications where high current loads are expected.

Features

- In accordance with UL Standard 248-14
- RoHS compliant and Lead-free

• Available in cartridge and axial lead format and with various forming dimensions

Applications

Used as supplementary protection in appliance or utilization equipment to provide individual protection for components or internal circuits.

Description

The 328 Series is a 300VAC rated, 10kA surge withstand, 6.3×32mm ceramic fuse, designed in accordance to UL248-14 Standard, provided in cartridge and axial-lead packages.

Features

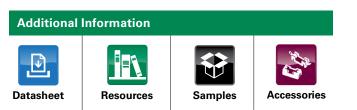

- High surge withstand capability
 - 20 hits of 10kA 8/20µs surge
 - Meets ANSI/IEEE C62.41.2, Category C-High
 - Meets US Dept of Energy (DOE) MSSLC/ CBEA street lighting and parking lot lighting, elevated level
- Small form factor (6.3×32mm) with cartridge and axial-lead package options
- Breaking capacity: 200A@300VAC, 200A@100VDC
- Lead-free, RoHS compliant, halogen-free
- Compliant with UL248-14
- Operating temperature: -55°C to 125°C

Description

A 600Vdc rated ceramic fuse with remarkable interrupting rating in a compact 6.3×32mm package, which is well suited for circuit protection in high DC energy applications.

Features

- In accordance with Underwriter's Laboratories Standard, UL 248-14.
- Available in cartridge and axial lead form.
- Lead-free, Halogen free, and RoHS compliant.
- Superior interrupting rating of 10,000 Amperes.
- Compact form factor of 6.3×32mm.

Applications

High energy and power efficient applications.

345 Series Shock Safe Circuit Board Mount Enclosed Fuse Holders

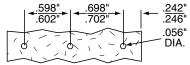

Dimensions

Recommended hole Pattern

Additional Information

Datasheet

Product Characteristics

| Compatible Fuse Types | 3AG 3AB 5×20mm |
|--------------------------|---|
| Description | Similar to our Shock-Safe panel mount fuseholders, this series is designed per IEC Standards 60127-6. Two different knob styles available are available for use with 3AG and 3AB ($\lambda^{\prime\prime} \times 1 \lambda^{\prime\prime}$) or 5 \times 20mm fuses. |
| Electrical | Insulation Resistance: 10,000 megohm minimum at 500 VDC. Contact Resistance: Less than .005 ohm average at a current of one ampere. |
| Dielectric Strength | 4000 volts minimum. Mounting: Intended for soldering to printed circuit boards. |
| Molded Parts | Body Material: Black glass-filled thermoplastic (UL 94V0). |
| Knob | Screwdriver slot, fuse extractor type with nickel-plated, copper alloy insert. Spring-loaded, bayonet style. Knob Material: Grey or Black glass-filled thermoplastic (UL94 V-0) |
| Terminals | Brass. Tin-plated. |
| Ambient Temperature | -40°C to +85°C. |

345 Series Shock-Safe Panel Mount Enclosed Fuse Holders

Rohs 🕫 📢 🚯 🚈

For 3AB, 3AG, 5×20mm, or 2AG Fuses Compatible Fuses Designed to eliminate the possibility of electrical shock, as defined in IEC standards 60127-6. The universal fuseholder body will accept 3AB, 3AG, 5 × 20mm, and 2AG fuse sizes depending on knob selected. Permits inventory reduction of bodies and provides knob interchange versatility. Anti-tease feature eliminates circuit interruption when knob is accidentally Description depressed. Five fuseholder types assure design flexibility. Available with two knob styles - screwdriver slot or fingergrip. Available in two terminal styles dual-purpose for soldering or 3/16" NEMA quick connect; and ¼" NEMA/DIN quick connect. Quick fuse size identification is provided with letters on fingergrip knob and color-coded screwdriver slot knobs. Insulation Resistance: 10,000 megohm minimum at Electrical 500 VDC. Contact Resistance: Less than .005 ohm average at currents up to 1 ampere. Threaded styles withstand 15 in.-lb. mounting torque. Low profile and High profile panel thickness: .032" min./.310" max. Quick mount panel thickness: .012" min./.360" max. Rear mount panel thickness: .012" Mounting min./.260" max. Body Material: Black glass-filled thermoplastic (UL **Molded Parts** 94V0). Grey, blue or black glass-filled thermoplastic (UL94 V-0) Knob Material Hex Nut Material: Black glass-filled thermoplastic. Finger-Grip, Fuse Extractor type or Screwdriver Slot, Fuse Extractor type with plated copper alloy insert. Knob Plated copper alloy contact clips. Spring loaded, locking mechanism provides an anti-tease feature and will not vibrate loose. Copper alloy. Tin-plated. Three styles available. A .187' dual purpose terminal accepts wire for soldering or a Quick-Connect receptacle. .187" terminal for NEMA Quick-Connect and .250" terminal for NEMA/DIN Quick-Terminals Connect available. Ambient -40°C to +85°C. Temperature Threaded style fuseholders are supplied with a thermoplastic hex nut unassembled. Quick mount style fuseholders are supplied with a push-on type retaining nut, black oxide finish, unassembled. A synthetic rubber "O" ring will be supplied only with the screwdriver slot knob when the drip-proof version is requested. Hardware To order with a metal internal tooth lockwasher (L) and/or neoprene panel washer (N) and/or drip-proof synthetic rubber "O" ring with Neoprene washer (NP) [Screwdriver slot knob only], add the appropriate suffix (L, N, or NP) respectively (or in combination) to the catalog number.

342 Series Panel Mount Enclosed Fuse Holders for 3AG/AB Fuses

Rohs 🕫 恥 🚯

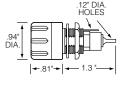

Dimensions

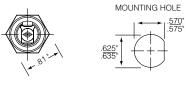

Solder 3' Ib 'Cut. 14' Cut

| | General Application Products | Watertight Product | |
|------------------------|--|---|--|
| Compatible Fuses | 3AG/AB | | |
| Electrical | Rated at 20 amperes | for any voltage up to 250. | |
| Ambient Temperature | -40°C | to +85°C. | |
| Dielectric Strength | 2400 volts minimum. | 1500 volts minimum. | |
| Mounting | Withstands 15 lb in. mounting torque; maximum panel thickness: .187". | Withstands 15 lbin. mounting torque; maximum panel thickness is .250". | |
| Molded Parts | Black thermoplastic (UL94 V-0). | Black thermoset (UL94 V-0). | |
| Seal | Neoprene washer provide drip-proof protection on the front side of the panel (upon request) | O-ring provides a watertight seal on the front side of the panel per MIL-PRF-19207. | |
| Terminals | Copper & copper alloy. Tin plated, except ¼″ Quick-Connect terminals are nickel plated. | Copper & copper alloy. Tin plated. | |
| Hardware | Comes with a mounting nut and neoprene washer | O-rings (2) and hex nut, unassembled. | |

340 Series RF Shielded / Watertight Panel Mount Fuse Holders for 3AB/3AG Fuses Refs @

Dimensions

Product Characteristics

| Compatible Fuses | For 3AG and 3AB Fuses |
|--|--|
| Description | Radio frequency shielded fuseholders eliminate possible transmission or reception of RF signals through the hole in the chassis in which the fuseholder is mounted. These fuseholders comply with the watertight construction requirement of MIL-PRF-19207 and the Shock- Safe requirements of IEC 60127-6. A rubber O-ring and conductive gasket maintain RF shielding and watertight construction. |
| Electrical | Rated at 20 amperes for any voltage up to 300 volts. |
| Ambient Temperature | -40°C to +85°C. |
| Dielectric Strength | 4000 volts minimum. |
| Insulation Resistance | 10,000 meghom minimum at 500 V. |
| Contact Resistance Less than .005 ohms average at curre up to 1 amp. | |
| Mounting | Withstand 15 Lb-in mounting torque. Maximum panel thickness is 0.31" |
| Molded Parts Body material: Thermoplastic | |
| Knob Material Thermoplastic | |
| Terminals | Brass. Tin plated, accept solder or .187" female connector. |

* Ensure that proper fuse re-rating is factored in fuseholder selection.

344/348 Series Blown Fuse Indicating / Low Profile Holders for 3AB/3AG Fuses

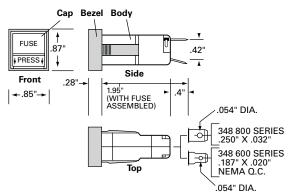

Dimensions

344 Series

348 Series

Additional Information

| Compatible Fuses | For 3AB/3AG Type Fuses |
|------------------------|---|
| Features | Low profile design Blown fuse indicator |
| Electrical | 348 Series: Rated at 15 amps for any voltage up to 250 volts. 344 Series: Rated at 15 amps at lamp voltage shown below. |
| Dielectric Strength | 1500 volts minimum. When designing indicating type fuseholders into a circuit, consideration should be given to the resistance of fractional amperage fuses and the parallel resistance of the indicator lamp and its resistor. |
| Mounting | Panel thickness range: .031" through .125". |
| Molded Parts | Black thermoplastic body (UL94 V-0). Thermoplastic bezel, cap and lens (UL94 V-2). See tables below fo colors. |
| Terminals | Brass. Tin-plated. |
| Ambient Temperature | Non-indicating: -40°C to +85°C. Indicating: -40°C to +60°C. |
| Fuse Installation | Insert a fuse into the cap and push the assembly into the body until it latches. Press in and down to unlatch for removal. |

NOTE: Ensure that proper re-rating is factored in fuseholder selectio

Recomended Mounting Hole

Compatible Fuses For 3AG, 3AB, 5×20mm, or 2AG Fuses Shock-Safe design eliminates any possibility of electrical shock, per IEC Standards IEC 60127-6. Features Fuse carrier holds spare fuse for fast, easy fuse replacement and convenient servicing. Low profile design Rating: See TABLE. Insulation Resistance: 10,000 megohm minimum at Electrical 500 VDC Contact Resistance: Less than 0.01 ohm. Snap-in mounting. No hardware required. Panel Mounting thickness range: .032" through .125". Thermoplastic (UL94 V-0) black standard (other colors Molded Parts available as special). Spring-loaded. Unlocks with a press of the finger. Locks into place to prevent accidental circuit interruption. Permanently attached to fuseholder body Fuse Carrier to prevent loss. Extracts fuse from live terminals. Holds spare fuse.

Copper alloy, tin plate. Accepts quick-connect or

10-55-10 Hz at .06" double amplitude (Method 201,

Dimensions

MOUNTING HOLE TERMINAL DETAIL

| Compatible Fuse Size | 225 Series, 229 Series, 2200029 Series |
|-------------------------|---|
| Features | Screwdriver slot knob style provides low profile Shock-safe design reduces possibility of electrical shock. |
| Electrical | Rated at 10 amperes for any voltage up to 300 volts Insulation Resistance: 10,000 megohm minimum at 500 VDC. Contact Resistance: Less than .005 ohm average at currents up to 1 ampere. |
| Dielectric Strength | 4000 volts terminal to panel, 3000 volts terminal to terminal. Mounting: Withstands 10 lbin. mounting torque. Maximum panel thickness is 250". |
| Molded Parts | Body, knob, and hex nut material: Black, glass reinforced thermoplastic. |
| Knob | Screwdriver slot, fuse extractor type with nickel- plated, beryllium copper insert. Stainless steel spring. |
| Terminals | Brass. Tin-plated. Solder/Q.C. Terminals accept soldered wire or a .110" quick-connect receptacle. The NEMA-style .110" Q.C. terminal has a .048" hole. |
| Ambient Temperature | -40°C to +85°C. |

Product Characteristics

| Compatible Fuse Sizes | 5×20mm Fuses | |
|--------------------------|---|--|
| Description | The metric Omni-Blok® fuse block, for 5×20mm size fuses, is a low profile design that is available with a choice of solder type terminals, NEMA style QC terminals, or PC board mountable terminals. Each of these designs has tin plated brass terminals. A unique design feature provides self-alignment of the clips to the fuse caps. This feature, plus a one-piece clip/terminal design, assures low contact resistance. An anti-one- piece clip/terminal design, assures low contact resistance. An anti rotation feature is also available on the solder and QC terminal designs. | |
| Electrical | UL/CSA VDE Solder Type — 10A, 600V., 6.3A, 250V Q.C. Type — 10A, 600V. 6.3A, 250V PCB Type — 10A, 600V. 6.3A, 250V | |
| Dielectric Strength | 1500V., Minimum | |
| Clip/Terminals | Tin-Plated Spring Brass | |
| Base | Glass reinforced Thermoplastic. UL 94V0 flammability rating. Gray color (GY) for anti-rotational series, black color for all others. | |
| Ambient Temperature | -40°C to +85°C | |

Rohs 🕫 恥 🚯

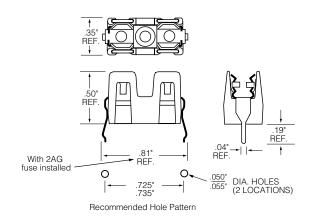

Dimensions

Solder & Q.C. Types:

P.C. Board Mount Type

Product Characteristics

| Compatible Fuses Size | 2AG | |
|--------------------------|---|--|
| Description | This low profile Omni-Blok® Fuse Block design is available with a choice of solder type terminals, Q.C. terminals or P.C. board mountable terminals. The PCB design is offered with either tin-plated brass terminals for normal applications or tin-plated beryllium copper terminals for use in caustic environments. These fuse blocks feature individual barriers which reinforce the fuse clips while providing greater protection against clip damage and electrical shock. The unique design permits self-alignment of clips to fuse cap. This, plus a one-piece clip/ terminal assures low contact resistance. Multiple units may be broken apart to obtain desired number of units. | |
| Rating | 400 VAC/DC / 10A | |
| Dielectric Strength | 1500V., Minimum | |
| Clip/Terminals | Tin-Plated Spring Brass, except pn 254121 is Tin-Plated Beryllium Copper | |
| Base | Black Thermoplastic, glass reinforced with UL V0 flammability rating | |
| Ambient Temperature | -40°C to +85°C | |

Littelfuse Expertise Applied Answers Delivered

Product Characteristics

| Compatible Fuses Size | 3AB/AG |
|-----------------------|--|
| Description | A low profile fuse block featuring individual barriers which reinforce the fuse clips while providing greater protection against clip damage and electrical shock. The unique design permits self-alignment of clips to fuse cap. This, plus a one-piece clip/terminal assures low contact resistance. Higher currect ratings have been attained using spring brass clips. With the exception of the two-pole unit, multiple pole units may be broken apart to obtain desired number of poles |
| Dielectric Strength | 1500V., Minimum |
| Clip/Terminals | Tin plated phosphorus bronze except for 354900 series which is tin plated spring brass. |
| Base | Glass reinforced Thermoplastic. UL 94V0 flammability rating. The standard base color is Gray except for 345 x21 items (single pole products which include anti-rotation boss option) where the standard base color is Black. Refer to the Ordering Information table on the following page for more information. |
| Ambient Temperature | –40°Cto +85°C |

155 Series Twist-Lock In-Line Holders for 3AG/AB Fuses

RoHS 🕫

Dimensions

| Compatible Fuses | For low voltage 3AG/AB or SFE Fuse Applications |
|---------------------|--|
| Electrical | Intended for use at 32 volts or less with fuses rated up to 20 amperes when the proper spring is installed for fuse size. |
| Molded Parts | Black Thermoplastic (UL94 V-2). Body halves have a .14" diameter hole for insulated wire. |
| Ambient Temperature | -40°C to +75°C. |
| Contact Rivet | Brass. Nickel plating. Designed to accommodate #14 AWG stranded wire. |
| Assembled | Supplied with 19" loop of #14 AWG red vinyl insulated wire, SFE fuse (listed) with a spring in different lengths depending of the fuse size. |
| Unassembled | For assembly to #14 AWG wire. |
| Options | 150 215 is similar to 155 120A except no fuse is supplied. It is intended for use with 3AG fuses rated up to 20 amperes. |
| In-Line Fuseholder | Supplied with a spring in different lengths depending of the fuse size. |

* Please refer to Fuseology section for information on proper fuseholder re-rating.

** Fuseholders with specific wire sizes and lengths are available on special order.

Electrical Specifications by Items

Description

The Safe-T-Plus 259 Series offers a range of encapsulated fuses designed to enable greater safety for operating electronic equipment within potentially explosive environments. Originally designed to serve the needs of gas plants, petrochemical and processing industries, these fuses are certitifed for use within intrinsically safe apparatus with ATEX and IECEx certifications.

The fuse design and its encapsulant are suitable for use in intrinsically safe appartatus and associated apparatus for voltage not exceeding 125V rms (190V peak).

Features

- Encapsulated and sealed (1mm minimum)
- ATEX and IECEx certified components
- 0.062A 5A range options RoHS compliant
- Designed to operate within environments where there is danger of gas explosion from faulty circuits

Applications

• Testing, measuring or processing electronic and electrical equipment

Electrical Specifications by Items

Description

The 259-UL913 Series offers a range of encapsulated fuses certified under the UL 913, the standard for intrinsically safe electrical equipment, to operate in hazardous locations. Ideal for use in the oil, gas, mine, chemical process, and pharmaceutical industries, the 259-UL913 fuse was designed to limit the energy and temperature generated during its operation. In addition to UL913, these fuses meet ATEX and IECEx requirements. The fuse design and its encapsulant are suitable for use in intrinsically safe appartatus and associated apparatus for voltage not exceeding 125V rms (190V peak).

Description

481 Series alarm indicating fuses are designed to reduce down time by immediately pinpointing the blown (open) circuit while triggering an LED or audio alarm. This item requires 482 Series mating fuse holder.

All ranges of 481 Series fuses are available as our original design, and the 2-20 amp range is now available as a RoHS compliant option (use the "P" designator when ordering). See the part numbering section of this data sheet for related ordering instructions.

Features

- Color-coded indicator flags indicate ampere rating.
- Clear plastic lens option available for additional safety.
- RoHS compliant

Applications

Ideal for telecommunications and control panel circuits

Description

Ideal for telecommunications and control panel circuits, the 482 Series fuseholder is designed for use with Littelfuse 481 Alarm Indicating Fuses. Each holder is designed to accept other manufacturers' replacement fuses as well.

The fuseholder is available in three versions:

PCB Mount - 15A: Can be soldered directly to a printed circuit board. Rated up to 15 amperes. Available in single pole or gangable up to 20 poles. Fuseholder is keyed to prevent insertion of 20 ampere fuse.

Panel Mount - 20A: Available in a single pole version rated up to 20 amperes. Large leads for wire attachment.

Panel Mount - 15A: 15 ampere gangable version of fuseholder is keyed to prevent insertion of 20 ampere fuse.

* NOTE: 15 ampere gangable version of PCB Mount and Panel Mount fuseholders are keyed to prevent insertion of 20 ampere fuse. Please refer to "A" dimension of diagrams on following page. For additional terminal lengths, please contact Littelfuse.

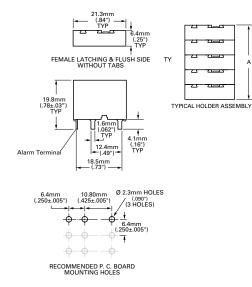

5 POLE HOLDER ASSEMBLY WITH FLUSH OPTION

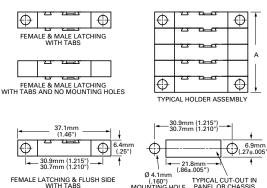

Δ

Dimensions

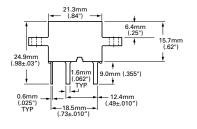

15A PCB Mount Series:

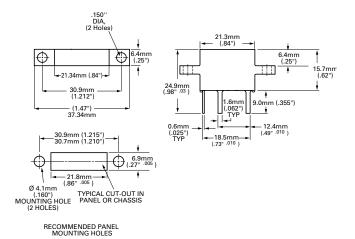

15A Panel Mount Series:

20A Panel Mount Series:

NOTE: The 20 ampere single pole holder is designed to accept all fuse ratings up to 20 amperes.

20 ampere fuseholders should be spaced 12.7mm (0.50") apart when loaded to maximum capacity, center to center to insure proper heat dissipation under normal operation.

Heatsinking may be required for operation in higher ambient temperatures or alternate configurations.

All terminals dimensions should be taken with fuse installed.
